AIRSAFS

Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

BRS

Biennial Reporting System

VERSION DATE: 12/31/15

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

CDL

Clandestine Drug Laboratory Locations

VERSION DATE: 12/29/18

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

DOCKETS

EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

EC

Federal Engineering Institutional Control Sites

VERSION DATE: 06/11/19

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. The data displays remedy component information for Superfund decision documents issued in fiscal years 1982-2017, and it includes final and deleted NPL sites as well as sites with a Superfund Alternative Approach (SAA) agreement in place. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

ECHOR06 Enforcement and Compliance History Information

VERSION DATE: 03/09/19

The U.S. Environmental Protection Agency's Enforcement and Compliance History Online (ECHO) database, provides compliance and enforcement information for facilities nationwide. This database includes facilities regulated as Clean Air Act stationary sources, Clean Water Act direct dischargers, Resource Conservation and Recovery Act hazardous waste handlers, Safe Drinking Water Act public water systems along with other data, such as Toxics Release Inventory releases.

ERNSTX Emergency Response Notification System

VERSION DATE: 04/07/19

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

FRSTX Facility Registry System

VERSION DATE: 04/05/19

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

HMIRSR06 Hazardous Materials Incident Reporting System

VERSION DATE: 04/14/19

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

ICIS Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 03/09/19

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

ICISNPDES Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 07/09/17

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. This database is provided by the U.S. Environmental Protection Agency.

LUCIS Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

MLTS Material Licensing Tracking System

VERSION DATE: 06/29/17

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements. Disclaimer: Due to agency regulations and policies, this database contains applicant/licensee location information which may or may not be related to the physical location per MLTS site.

NPDESRO6 National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Authorized by the Clean Water Act, the National Pollutant Discharge Elimination System (NPDES) permit program controls water pollution by regulating point sources that discharge pollutants into waters of the United States. The NPDES database was collected from the U.S. Environmental Protection Agency (EPA) from December 2002 through April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data. This database includes permitted facilities located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

PADS PCB Activity Database System

VERSION DATE: 09/14/18

PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the U.S. Environmental Protection Agency of such activities.

PCSR06 Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 6. This region includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

RCRASC RCRA Sites with Controls

VERSION DATE: 04/24/19

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities with institutional controls in place.

SEMSLIENS SEMS Lien on Property

VERSION DATE: 08/13/18

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs. This is a listing of SEMS sites with a lien on the property.

SFLIENS CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States

Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete. Please refer to the SEMSLIENS database as source of current data.

SSTS Section Seven Tracking System

VERSION DATE: 02/01/17

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

TRI Toxics Release Inventory

VERSION DATE: 12/31/17

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

TSCA Toxic Substance Control Act Inventory

VERSION DATE: 12/31/12

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

RCRAGR06 Resource Conservation & Recovery Act - Generator

VERSION DATE: 04/01/19

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities currently generating hazardous waste. EPA region 6 includes the following states: Arkansas,

Environmental Records Definitions - FEDERAL

Louisiana, New Mexico, Oklahoma, and Texas.

RCRANGR06

Resource Conservation & Recovery Act - Non-Generator

VERSION DATE: 04/01/19

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities classified as non-generators. Non-Generators do not presently generate hazardous waste. EPA Region 6 includes the following states: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

ALTFUELS

Alternative Fueling Stations

VERSION DATE: 03/01/19

Nationwide list of alternative fueling stations made available by the U.S. Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Bio-diesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE).

FEMAUST

FEMA Owned Storage Tanks

VERSION DATE: 12/01/16

This is a listing of FEMA owned underground and aboveground storage tank sites. For security reasons, address information is not released to the public according to the U.S. Department of Homeland Security.

HISTPST

Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

ICISCLEANERS

Integrated Compliance Information System Drycleaners

VERSION DATE: 03/09/19

This is a listing of drycleaner facilities from the Integrated Compliance Information System (ICIS). The U.S. Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments. The following Primary SIC Codes are included in this data: 7211, 7212, 7213, 7215, 7216, 7217, 7218, and/or 7219; the following Primary NAICS Codes are included in this data: 812320, 812331, and/or 812332.

MRDS Mineral Resource Data System

VERSION DATE: 03/15/16

MRDS (Mineral Resource Data System) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS.

MSHA Mine Safety and Health Administration Master Index File

VERSION DATE: 03/15/19

The Mine dataset lists all Coal and Metal/Non-Metal mines under MSHA's jurisdiction since 1/1/1970. It includes such information as the current status of each mine (Active, Abandoned, NonProducing, etc.), the current owner and operating company, commodity codes and physical attributes of the mine. Mine ID is the unique key for this data. This information is provided by the United States Department of Labor - Mine Safety and Health Administration (MSHA).

BF Brownfields Management System

VERSION DATE: 07/10/19

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

DNPL Delisted National Priorities List

VERSION DATE: 06/11/19

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

NLRRCRAT No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 04/01/19

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

Environmental Records Definitions - FEDERAL

ODI Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An "open dump" is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

RCRAT Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 04/01/19

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems that could result from underground tanks storing petroleum and other hazardous substances. This listing refers to facilities recognized as hazardous waste treatment, storage, and disposal sites (TSD).

SEMS Superfund Enterprise Management System

VERSION DATE: 06/11/19

The U.S. Environmental Protection Agency's (EPA) Office of Solid Waste and Emergency Response, Office of Superfund Remediation and Technology Innovation (OSRTI), has implemented The Superfund Enterprise Management System (SEMS), formerly known as CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) to track and report on clean-up and enforcement activities taking place at Superfund sites. SEMS represents a joint development and ongoing collaboration between Superfund's Remedial, Removal, Federal Facilities, Enforcement and Emergency Response programs.

SEMSARCH Superfund Enterprise Management System Archived Site Inventory

VERSION DATE: 06/11/19

The U.S. Environmental Protection Agency's (EPA) Superfund Enterprise Management System Archived Site Inventory (List 8R Archived) replaced the CERCLIS NFRAP reporting system in 2015. This listing reflects sites at which the EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program.

SMCRA Surface Mining Control and Reclamation Act Sites

VERSION DATE: 03/19/19

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type,

Environmental Records Definitions - FEDERAL

and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

USUMTRCA

Uranium Mill Tailings Radiation Control Act Sites

VERSION DATE: 03/04/17

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

DOD

Department of Defense Sites

VERSION DATE: 12/01/14

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

FUDS

Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. **DISCLAIMER:** This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. FUSRAP

Formerly Utilized Sites Remedial Action Program

VERSION DATE: 03/04/17

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Former Military Nike Missile Sites

VERSION DATE: 12/01/84

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

NPL

National Priorities List

VERSION DATE: 06/11/19

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

PNPL

Proposed National Priorities List

VERSION DATE: 06/11/19

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

RCRAC

Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 04/01/19

The Resource Conservation and Recovery Act (RCRA) gives the U.S. Environmental Protection Agency (EPA) the authority to control hazardous waste from the "cradle-to-grave." This includes the generation, transportation, treatment, storage, and disposal of hazardous waste. RCRA also set forth a framework for the management of non-hazardous solid wastes. The 1986 amendments to RCRA enabled EPA to address environmental problems

GWCC Groundwater Contamination Cases

VERSION DATE: 12/31/17

This is a Joint Groundwater Monitoring and Contamination Report provided by the Texas Commission on Environmental Quality (TCEQ). The annual report describes the status of groundwater monitoring activities conducted or required by each agency at regulated facilities or associated with regulated activities. The report provides a general overview of groundwater monitoring by participating members on a program by program basis. Groundwater contamination is broadly defined in the report as any detrimental alteration of the naturally occurring quality of groundwater.

HISTGWCC Historic Groundwater Contamination Cases

VERSION DATE: 12/31/16

This is a Joint Groundwater Monitoring and Contamination Report provided by the Texas Commission on Environmental Quality (TCEQ) that includes historic groundwater contamination cases reported since 1994. These cases have been closed by a program area or agency, such as the TCEQ, the Railroad Commission of Texas, and/or the Texas Alliance of Groundwater Districts. According to the TCEQ report, although enforcement actions may be closed on these cases, the Activity Status Code descriptions allow that groundwater contamination may still be present at the site and may therefore be of interest to regulatory agencies and the general public.

MSD Municipal Setting Designations

VERSION DATE: 01/16/19

The Texas Commission on Environmental Quality (TCEQ) defines an MSD as an official state designation given to property within a municipality or its extraterritorial jurisdiction that certifies that designated groundwater at the property is not used as potable water, and is prohibited from future use as potable water because that groundwater is contaminated in excess of the applicable potable-water protective concentration level. The prohibition must be in the form of a city ordinance, or a restrictive covenant that is enforceable by the city and filed in the property records. The MSD property can be a single property, multi-property, or a portion of property.

SIEC01 State Institutional/Engineering Control Sites

VERSION DATE: 01/01/19

The Texas Risk Reduction Program (TRRP) requires the placement of institutional controls (e.g., deed notices or restrictive covenants) on affected property in different circumstances as part of completing a response action. In its simplest form, an institutional control (IC) is a legal document that is recorded in the county deed records. In certain circumstances, local zoning or ordinances can serve as an IC. This listing may also include locations where Engineering Controls are in effect, such as a cap, barrier, or other engineering device to prevent access, exposure, or continued migration of contamination. The sites included on this list are regulated by various programs of the Texas Commission on Environmental Quality (TCEQ).

TIERII Tier II Chemical Reporting Program Facilities

VERSION DATE: 12/31/12

The Texas Tier II Chemical Reporting Program in the Department of State Health Services (DSHS) is the state repository for EPCRA-required Emergency Planning Letters (EPLs), which are one-time notifications to the state from facilities that have certain extremely hazardous chemicals in specified amounts. The Program is also the state repository for EPCRA/state-required hazardous chemical inventory reports called Texas Tier Two Reports. This data contains those facility reports for the 2005 through the 2012 calendar years. Please contact the Texas Commission on Environmental Quality Tier II Chemical Reporting Division as the current source for this data, due to confidentiality and safety reasons details such as the location and capacity of on-site hazardous chemicals is only available to local emergency planning agencies, fire departments, and/or owners.

IHW Industrial and Hazardous Waste Sites

VERSION DATE: 05/02/19

Owner and facility information is included in this database of permitted and non-permitted industrial and hazardous waste sites. Industrial waste is waste that results from or is incidental to operations of industry, manufacturing, mining, or agriculture. Hazardous waste is defined as any solid waste listed as hazardous or possesses one or more hazardous characteristics as defined in federal waste regulations. The IHW database is maintained by the Texas Commission on Environmental Quality.

PIHW Permitted Industrial Hazardous Waste Sites

VERSION DATE: 05/02/19

Owner and facility information is included in this database of all permitted industrial and hazardous waste sites. Industrial waste is waste that results from or is incidental to operations of industry, manufacturing, mining, or agriculture. Hazardous waste is defined as any solid waste listed as hazardous or possesses one or more hazardous characteristics as defined in federal waste regulations. Permitted IHW facilities are regulated under 30 Texas Administrative Code Chapter 335 in addition to federal regulations. The IHW database is maintained by the Texas Commission on Environmental Quality.

PST Petroleum Storage Tanks

VERSION DATE: 05/02/19

The Petroleum Storage Tank database is administered by the Texas Commission on Environmental Quality (TCEQ). Both Underground storage tanks (USTs) and Aboveground storage tanks (ASTs) are included in this report. Petroleum Storage Tank registration has been a requirement with the TCEQ since 1986.

APAR Affected Property Assessment Reports

VERSION DATE: 04/05/19

As regulated by the Texas Commission on Environmental Quality, an Affected Property Assessment Report is required when a person is addressing a release of chemical of concern (COC) under 30 TAC Chapter 350, the Texas Risk Reduction Program (TRRP). The purpose of the APAR is to document all relevant affected property information to identify all release sources and COCs, determine the extent of all COCs, identify all transport/exposure pathways, and to determine if any response actions are necessary. The Texas Administrative Code Title 30 §350.4(a)(1) defines affected property as the entire area (i.e. on-site and off-site; including all environmental media) which contains releases of chemicals of concern at concentrations equal to or greater than the assessment level applicable for residential land use and groundwater classification.

VCP Voluntary Cleanup Program Sites

VERSION DATE: 08/20/19

The Texas Voluntary Cleanup Program (VCP) provides administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in Texas. Since all non-responsible parties, including future lenders and landowners, receive protection from liability to the state of Texas for cleanup of sites under the VCP, most of the constraints for completing real estate transactions at those sites are eliminated. As a result, many unused or underused properties may be restored to economically productive or community beneficial uses. The VCP database is maintained by the Texas Commission on Environmental Quality.

IHWCA Industrial and Hazardous Waste Corrective Action Sites

VERSION DATE: 07/09/19

This database is provided by the Texas Commission on Environmental Quality (TCEQ). According to the TCEQ, the mission of the industrial and hazardous waste corrective action program is to oversee the cleanup of sites contaminated from industrial and municipal hazardous and industrial nonhazardous wastes. The goals of this program are to: Ensure that sites are assessed and remediated to levels that protect human health and the environment; Verify that waste management units or facilities are taken out of service and closed properly; and to Facilitate revitalization of contaminated properties.

SF State Superfund Sites

VERSION DATE: 01/16/19

The state Superfund program mission is to remediate abandoned or inactive sites within the state that pose an unacceptable risk to public health and safety or the environment, but which do not qualify for action under the federal Superfund program (NPL - National Priority Listing). As required by the Texas Solid Waste Disposal Act, Texas Health and Safety Code, Chapter 361, the Texas Commission on Environmental Quality identifies and evaluates these facilities for inclusion on the state Superfund registry. This listing includes any recent developments and the anticipated action for these sites as documented in the annual state Superfund registry publication of the Texas Register as well as the Superfund Webpage on the TCEQ website.

INTRODUCTION

An investigation of subsurface conditions for the Northern Walnut Creek Trail, Phase 2, proposed Pedestrian Bridges and Trail Improvements located along Little Walnut Creek in Austin, Texas, was authorized Mr. Sam Shorter, P.E., with the RPS Group, in accordance with our proposal dated 6 August 2013. The purpose of this investigation was to determine subsurface materials and conditions at the proposed bridge sites and to establish design and construction criteria for the pedestrian bridge foundations and walking trail improvements. The Phase 2 improvements begin at the Walnut Creek Metropolitan Park parking lot and extend east approximately 7,963 feet to the Interstate Highway 35 frontage road.

SCOPE

Our investigation consisted of the following:

- A. Laying out and drilling nine soil and rock borings to a depth of 6 feet to 40.8 feet below existing grade.
- B. Logging the borings in the field by a licensed water well driller and further logging in the laboratory by the geotechnical engineer.
- C. Obtaining samples of subsurface materials for laboratory analyses.
- D. Plugging all bore holes immediately following the drilling operations.

- E. Making recommendations based on engineering analysis of field notes and laboratory test results.

LABORATORY TESTS

Samples of subsurface materials were analyzed as necessary in the field and laboratory in general accordance with appropriate ASTM standards:

- A. Moisture Content Tests (ASTM D2216)
- B. Atterberg Limits Tests (ASTM D4318)
- C. Minus No. 200 Mesh Sieve Tests (ASTM D422)
- D. Unconfined Compression Tests (ASTM D2938)

These tests were performed together with visually inspecting and classifying the soil in general accordance with ASTM D2487 and described as recommended in ASTM D2488. Results of these tests are shown in the attached Logs of Borings and Laboratory Test Results found in the Appendix.

SUBSURFACE INVESTIGATION

Subsurface materials at the bridge sites and trail improvements were explored by nine soil borings drilled to depths of 6 feet to 40.8 feet below the existing ground surface. All holes were logged in the field by an experienced driller familiar with Austin area geology under the direction of the geotechnical engineer. Grab samples were taken from the auger flights while undisturbed samples were taken using a thin wall seamless Shelby tube sampler. Standard penetration tests were performed by using a 2-inch O.D. split-spoon sampler driven by a 140-pound hammer dropping a distance of 30 inches. The number of blows required to advance the split-spoon 12 inches is recorded on the attached soil-boring logs. Continuous coring was performed in the rock using a Christensen NXB wireline system with a diamond core bit. The outside diameter of the core is 1-7/8 inches. Core samples were placed in core boxes in the sequence of recovery, carefully labeled in the field and then transported to the lab for inspection and testing. Laboratory tests were run on selected samples and the results of these tests are shown in the attached Logs of Borings.

GENERAL SITE DESCRIPTION

The Northern Walnut Creek Trail begins at the Walnut Creek Metropolitan Park parking lot and extends east approximately 7,963 feet to the Interstate Highway 35 frontage road in Austin, Texas. The trail is currently unimproved dirt path along the creek. Proposed pedestrian bridges are located in four locations at creek crossings. Proposed new boardwalks are also planned along the trail. The areas and applicable borings are summarized in Table I below.

Table I

Pedestrian Bridge Location	Applicable Borings
Structure (Bridge) No. 1	B-02 and B-03
Structure (Boardwalk) No. 2	B-04 and B-05
Structure (Bridge) No. 3	B-05
Structure (Bridge) No. 4	B-06
Structure (Bridge) No. 5	B-08
Structure (Boardwalk) No. 6	B-08
Structure (Boardwalk) No. 7	B-09

The proposed trail alignment is in heavily wooded areas. The terrain is variable and most of the bridge sites consist of moderate to steep sloping areas.

SUBSURFACE CONDITIONS

Based on the "*Geological Map of the Austin Area, Texas*," published by the Bureau of Economic Geology, the project site is located in the Austin Group (Kau) geologic formation. The Austin Group formation is made up of soft to hard tan to gray chalk, marly limestone and limestone rock. The Austin Group is thin to thick bedded and massive to slightly nodular. Residual alluvial brown to light brown sandy lean clayey soils overlie the rock and vary in depth from 1.8 feet to 18 feet. The soils encountered in our borings generally correspond with the above geological descriptions. A detailed depiction of the soil conditions is given in the Logs of

Borings found in the Appendix.

Fill deposits overlie the lean clays in borings B-04, B-05, and B-09 and vary from one foot to six feet. On the surface and below the fill material, lean clays and sandy lean clays are found and extend to depths of 1.8 feet to 18 feet below the existing grade. A formation of tan to gray limestone rock is then found and extends to termination of the borings at depths of 6 feet to 40.8 feet. The tan limestone is marly, severely weathered to intact and medium hard. The gray limestone contains thin to thick very stiff marly layers and fractured layers.

The fill material consists of unclassified brown, light brown and tan clayey sandy silt with varying amounts of small to large limestone rock. The residual lean sandy clay soils consist of varying amounts of sand, gravel and limestone rock. These soils are low to moderate in plasticity with plasticity indices (P.I.'s) ranging from 17 to 28. The tan and gray limestone rock is medium hard to hard with unconfined compression tests ranging from 12.9 TSF to 314.0 TSF with an average strength of 167 TSF.

All borings were dry at completion or dry prior to beginning of the coring operation. We expect groundwater at all bridge locations to be found near the top of the limestone formation or near the standing water level in the creek.

DISCUSSION AND RECOMMENDATIONS

It is our understanding new pedestrian bridges are to be constructed at four creek crossings. We expect the new bridges will be prefabricated steel frame or precast concrete structures and abutments will be cast in place concrete. We recommend all bridge abutments be supported on drilled straight shaft piers seated a minimum of 10 feet into the gray limestone rock and may be sized for an allowable bearing value of 20,000 PSF. All piers should also extend a minimum of 10 feet below the scour line of the creek. Pier seating depths will vary at each bridge site due to the varying rock conditions. Final pier seating depth must be determined by the geotechnical engineer in the field during drilling. We recommend a minimum pier size of 24 inches in diameter. All piers should be inspected full time by the geotechnical engineer or qualified technician during the pier drilling operation to verify proper bearing strata, seating depth, reinforcement placement, concrete placement, plumbness and cleanliness of hole.

Although no groundwater was encountered in the borings, casing of pier holes may be required. Groundwater flowing through the residual alluvial soils should be expected and pumping or de-watering of piers will likely be needed.

It is further our understanding some sections of the trail (boardwalks) will be elevated above grade. We expect the structures will be steel frame or reinforced concrete with pre-cast concrete decks. We recommend the boardwalks be supported on drilled straight shaft piers seated a minimum of 8 feet into the tan or gray limestone rock and sized for an allowable bearing value of 15,000 PSF. Pier seating depths will vary at each boardwalk site due to the varying rock conditions. Final pier seating depths must be determined by the geotechnical engineer in the field during drilling. We recommend a minimum pier size of 18 inches in diameter. All piers should be inspected full time by the geotechnical engineer or qualified technician during the pier drilling operation to verify proper bearing strata, seating depth, reinforcement placement, concrete placement, plumbness and cleanliness of hole. For estimating purposes the pier seating depths will vary from 9 to 18 below the existing grade.

Access to each of the structures' locations is very limited, and we recommend that when the final design is completed or during construction, that additional borings be drilled when right of ways have been cleared and rig access is available. Depths to rock and pier seating depths can be determined at that time. In lieu of additional borings, a representative of Hole Engineering, Inc. should be on site during pier drilling to make final determination of pier depths. The bid documents should have a line item for additional pier drilling depths.

SPECIFIC FOUNDATION RECOMMENDATIONS

Drilled Pier Construction Considerations – This foundation system consists of all foundation loads carried on drilled straight shaft piers.

1. Bearing Capacity

- a. Pedestrian Bridges – Drilled straight shaft piers should be sized for an allowable bearing value of 20,000 PSF when seated a minimum of 10 feet into the gray limestone rock and a minimum of 10 feet below the scour line of the creek bottom. Seating depths of the piers should be

- determined by the geotechnical engineer in the filed during drilling.
- b. Boardwalks – Drilled straight shaft piers should be sized for an allowable bearing value of 15,000 PSF when seated a minimum of 8 feet into the tan or gray limestone rock. Seating depths of the piers should be determined by the geotechnical engineer in the filed during drilling. For estimating purposes the pier seating depths will vary from 9 to 18 feet below the existing grade.
2. Inspection – All pier holes should be inspected by the soils engineer during the drilling operation for proper seating depth, bearing strata, reinforcement placement, concrete placement, plumbness, and cleanliness of hole.
3. Pier Construction – Drilled piers should be poured the same day pier holes are drilled. No piers should be left open over night. Concrete used for piers should have a minimum compressive strength of 3,000 PSI at 28 days using a five-sack mix. Slump should not exceed 6 inches. A tremmie should be used to prevent free fall of concrete to not more than 8 feet. If piers cannot be pumped dry then a 6-sack concrete mix (6 sacks of cement per cubic yard) may be used and concrete placed with a tremmie pipe from the bottom of the pier to the top.
4. Reinforcement – Pier reinforcement should be a minimum of 1.0% of shaft area. Block steel cage to assure sidewall clearance between steel and pier wall. Cage steel should extend to within 6 inches of the bottom of the pier hole.
5. Plumbness – Piers should be maintained plumb to within a tolerance not to exceed more than 1-inch out of plumb in 10 feet of shaft length.
6. Pumping and Casing – Casing and pumping of pier holes should be included in the bid documents.
7. Documentation – A pier inspection log should be completed by the Geotechnical engineer responsible for inspection to document pier depths, pier diameter, bearing strata, time and date piers completed, casing depth, groundwater conditions and time of concrete placement.

TRAIL SIDEWALKS

It is our understanding the trail will be improved with new concrete sidewalks approximately 10 feet wide. We expect the traffic on the sidewalks will be primarily pedestrians and bicycles with occasional maintenance vehicles such as ATVs and pickup trucks. We recommend the subgrade be prepared by removing the surficial organic material (grass). Fill, if needed, should consist of a low plasticity (P. I. 3 to 18) Select Fill and be compacted to a minimum of 95% of the maximum dry density in accordance with TxDOT test method TEX-113-E. Soil moisture should be within 3% of optimum. We recommend a minimum concrete thickness of 5 inches and reinforced with No. 3 bars at 18 inches on center or an equivalent wire mesh. Contraction joints should be spaced at 12 feet on center. Expansion joints are recommended only at connections to structures. Where steep cross slopes exist then a thickened edge beam should be considered to prevent erosion under the side walk. The thickened edge beam should extend through any fill and 8 inches to 12 inches into undisturbed soil or rock. For additional references on joint design and concrete strength requirements we recommend City of Austin Specification Item No. 360S "Concrete Pavement", ACI 325.12R and ACI 330R-08.

QUALITY CONTROL PROGRAM

We recommend a Quality Control Program be implemented by the Owner or Engineer to inspect the construction of the sidewalks and bridge foundations to verify all work is being performed in accordance with the approved engineered drawings and specifications. Inspections should be conducted on all foundation piers and footings to verify proper bearing and seating depth. Where drilled piers are installed, then full time inspection is recommended to verify proper bearing capacity is achieved. Pre-pour inspections should be made in order to verify proper placement of the reinforcement. All concrete should be inspected during placement for proper slump, air-content, and temperature. Test cylinders should be made to verify compressive strength. French drains, under-drains, waterproofing and capillary barriers should be inspected prior to backfilling. Reports of all inspections and tests should be forwarded to the Owner/Client, Architect, Engineer, and Contractor. We can provide these services upon

request.

LIMITATIONS

This geotechnical report has been prepared for the exclusive use of our client and the client's authorized design team in preparing the appropriate design and construction documents for this project. It is not intended for any other person's benefit. This report is based on specific project information provided by the client and/or design team as described herein. Any changes in the structures, loadings, configuration or grades should be brought to our attention so that we may determine what impact the change may have on our conclusions and recommendations. We expect to review the final grading plan and structural drawings to verify our recommendations are properly interpreted.

Our analyses and recommendations are based on subsurface conditions encountered in our borings. Variations in soil conditions may occur between borings. If during construction the soil strata are found to differ from that reported here, we should be notified immediately. This report contains soil-boring logs which are for the purpose of arriving at foundation design criteria and are not to be used by the excavation and/or pier drilling contractor in arriving at rock hardness or rock depth.

The presence or absence of water in our borings might not represent the groundwater conditions under all seasonal conditions. No long term groundwater monitoring was performed in the preparation of this report.

This report is based on conditions that exist on the site at the time of our investigation. Changes to the project, the building site or adjacent properties may affect the reliability of our report. We expect the structures addressed in our report to be started or substantially completed within approximately 24 months of the issuance of our report. The geotechnical report and specific recommendations will need to be re-evaluated if building construction is delayed by more than 24 months from the time of our report. Our report should not be used if the elapsed time of substantial completion exceeds 5 years without review or written consent from Holt Engineering, Inc.

The procedures, tests and recommendations of this investigation and report have been conducted and furnished in accordance with generally accepted professional engineering practices in the field of foundations, engineering soil mechanics and engineering geology. No other warranty is either expressed or implied.

APPENDIX

SELECT FILL SPECIFICATIONS

SELECT FILL

Select fill as called for on the plans shall meet one of the following requirements (% Passing or % Retained) as verified by the Engineer when properly slaked and tested by standard laboratory methods:

	<u>% Retained</u>	<u>Or</u>	<u>% Passing</u>
2 ½" Screen	0%		100%
1 ½" Screen	0% - 25%		75% - 100%
7/8" Screen	15% - 55%		45% - 85%
No. 4 Sieve	45% - 75%		25% - 55%
No. 40 Sieve	60% - 90%		10% - 40%

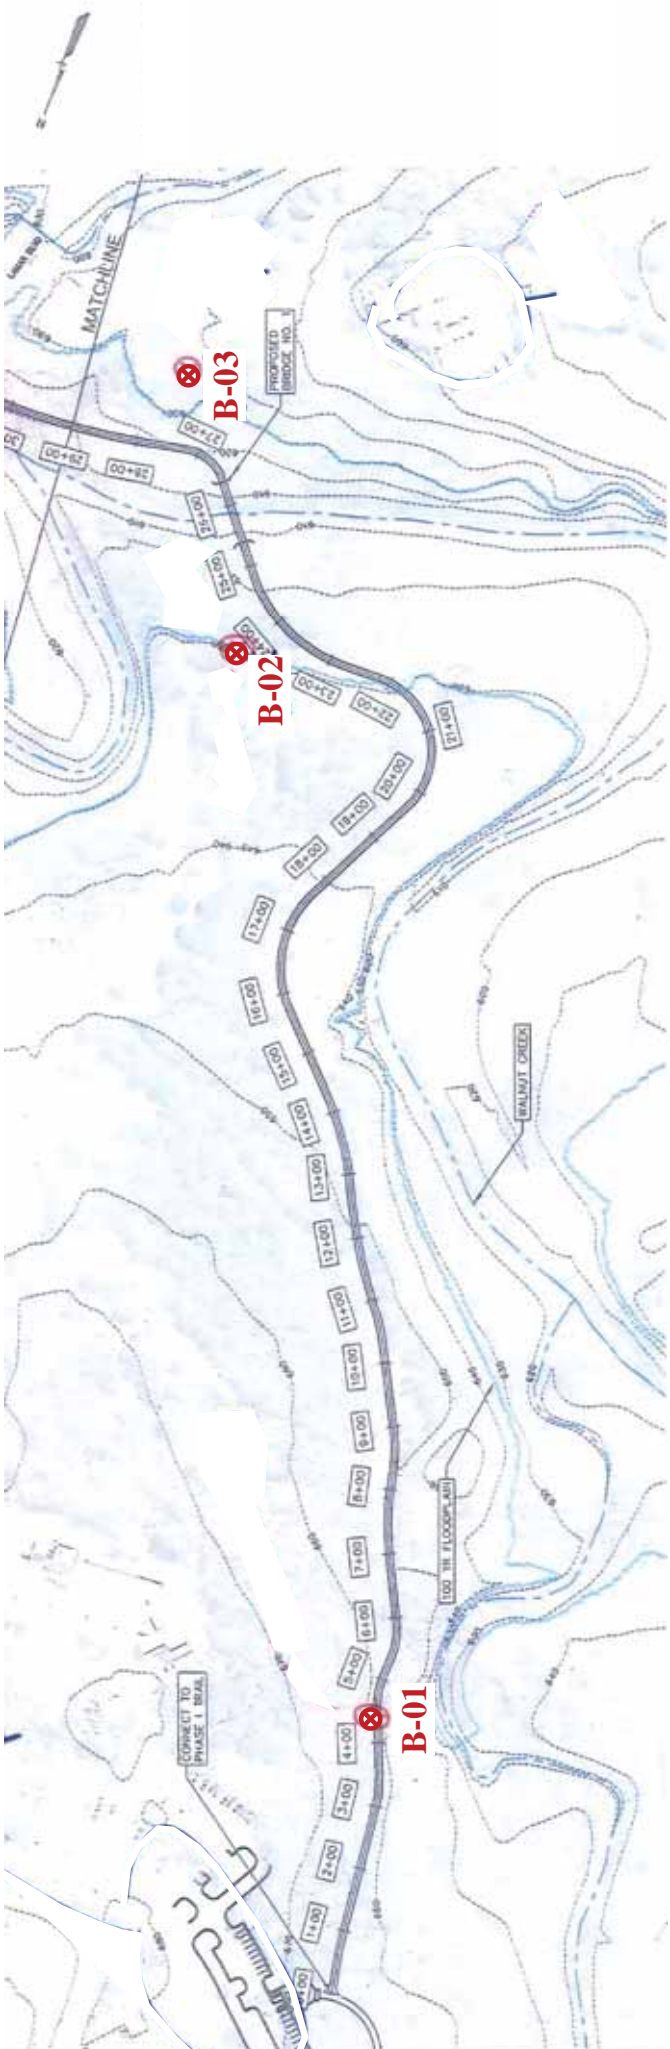

Material passing the No. 40 sieve shall have a minimum plasticity index of 3 and shall not have a plasticity index of greater than 18.

COMPACTION OF FILL

Select fill shall be placed in lifts not to exceed 8 inches loose measure and compacted to 95% or greater of the maximum dry density as determined in accordance with TxDOT test method TEX 113E. Field densities shall be checked in accordance with ASTM D-6938 (Nuclear Gauge) to ensure compliance with project specifications.

Select fill should be processed and moisture conditioned as needed to meet requirements of project moisture specifications.

Samples of fill shall be furnished to the testing laboratory seven days prior to installation to permit time for specification compliance, inspection, and approval.

STRENGTH OF COHESIVE SOILS

CONSISTENCY	COMPRESSIVE STRENGTH (TSF)
Very Soft	< 0.25
Soft	0.25 to 0.50
Firm	0.50 to 1.0
Stiff	1.0 to 2.0
Very Stiff	2.0 to 4.0
Hard	> 4.0

DENSITY OF GRANULAR SOILS

NUMBER OF BLOWS PER FT., N	RELATIVE DENSITY
0 – 4	Very Loose
4 – 10	Loose
10 – 30	Medium Dense
30 – 50	Dense
Over 50	Very Dense

Structure Description (ASTM D2488)

Stratified	Alternating layers of varying material or color with layers at least 6 mm thick
Laminated	Alternating layers of varying material or color with the layers less than 6 mm thick
Fissured	Breaks along definite planes of fracture with little resistance to fracturing
Slickensided	Fracture planes appear polished or glossy, sometimes striated
Blocky	Cohesive soil that can be broken down into small angular lumps which resist further breakdown
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay
Homogeneous	Same color and appearance throughout

Percentages of Sand & Gravel (ASTM D2488)

Trace	< 5%
Few	5% to 10%
Little	15% to 25%
Some	30% to 45%
Mostly	50% to 100%

Criteria for Describing Moisture Conditions (ASTM D2488)

Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, usually soil is below water table

1.0 Project Overview

The Texas Department of Transportation (TxDOT) proposes improvements along Interstate 35 (I-35) from State Highway (SH) 45 North in Williamson County to United States Highway (US) 290 East in Travis County, Texas. A detailed project description and location map is available in ECOS under PROJECT.

2.0 Introduction

This document serves as an update to the existing Hazardous Materials Initial Site Assessment (ISA) approved in May 2020, and a following design change memo approved in November 2020. The previously approved ISA and memo used aerial imagery from 2019 and a site investigation was performed in March and November 2020. Updated aerial imagery is now available and the Google Earth March 2020 and March 2021 aerial imagery was used to compare the changes in land use to the 2019 imagery and document any differences. Additionally, a site visit was conducted on June 4, 2021, to document current conditions.

3.0 Land Use Changes

The 2021 aerial imagery shows four new developments within the immediate vicinity of the project area. The first development is along Cheddar Loop Road, just north of Wells Branch Parkway. This property directly abuts the project area. Multiple commercial business spaces have been developed, and one site is still undergoing construction (see **Photos 1 and 2 in Appendix B**). These developments should not impact the proposed project.

The second new development is the construction of the NYOS Charter School just north of Yager Lane, just under 500 feet west from the project area. This land use change and construction would not impact the project.

The third land use change is the development of an undeveloped parcel in an area of proposed ROW along the eastern edge of the project area, immediately south of Tech Ridge Boulevard. This site is still under construction but is the future site of a multi-family housing development (see **Photo 3 in Appendix B**). It appears that the area of proposed ROW only overlaps an area of the property that is likely to be landscaped or parking lot; therefore, this development should not impact the proposed project.

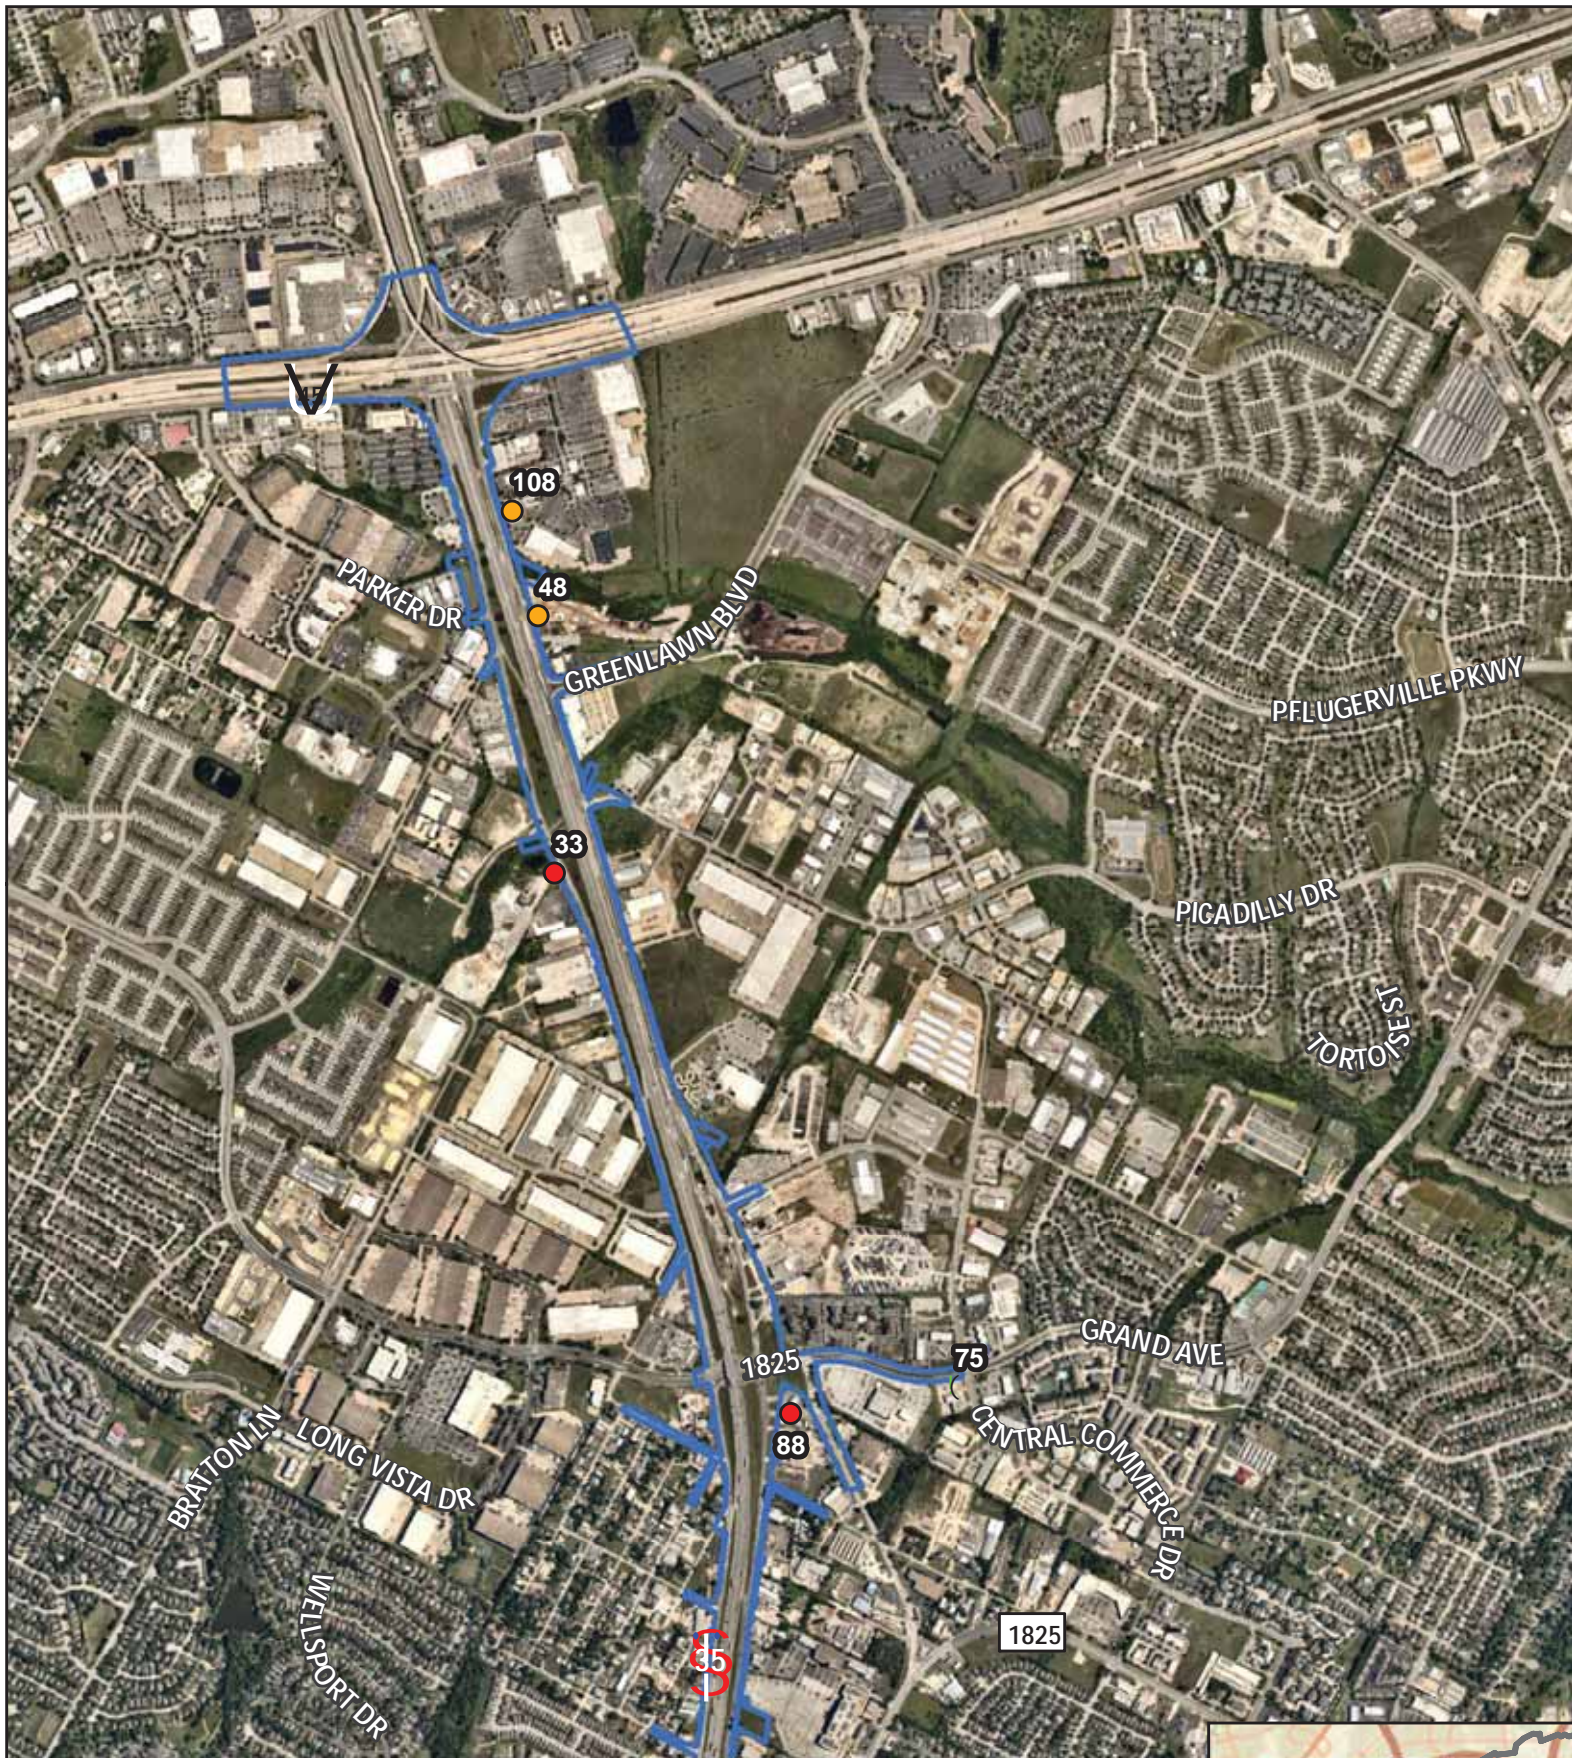

The final change noted in the updated aerial imagery is the construction of a parcel east of the project area and immediately north of Norwood Park Blvd. This parcel is located approximately 500 feet east of I-35, but does abut a portion of the project area that extends down Norwood Park Blvd. This site is still undergoing construction but based on the City of Austin building permit it is the future site of a multi-family housing development (see **Photo 4 in Appendix B**). This location and development should not impact the proposed project.

An updated Hazardous Materials Location Map using the 2021 imagery is located in **Appendix A**. A June 4, 2021, site visit confirmed the new developments seen on aerials, and also confirmed the remaining land use in the vicinity of the project area remained unchanged. Photographs from the site visit can be found in **Appendix B**.

4.0 Conclusion

The study area conditions appear consistent with what was observed in the May 2020 ISA and November 2020 design change memo. No indications of new hazardous material issues were observed during the field investigation. Though four parcels have new developments or are currently under construction, aerial imagery comparisons between the ISA 2019 aerial and the Google Earth March 2020 and March 2021 imagery did not identify any new issues or concerns.
