Subject: Mobility35 Capital Express Central: Traffic Projections Methodology Memorandum

Introduction

As part of Mobility35 Capital Express project development, daily, AM, and PM traffic volume forecasts are being generated along I-35 in Hays, Travis, and Williamson Counties. The I-35 corridor is being reconfigured to accommodate future managed lanes and other improvements between State Highway (SH) 45 N in Round Rock/Williamson County and SH 45 SE in Austin/Travis County, approximately 27 centerline miles in length. Due to the complexity, cost, and regional impact of implementation (Ref. 1), the Capital Express project is divided into three segments: South segment (from SH 45 SE to US 290W/SH 71), Central segment (from US 290W/SH 71 to US 290E), and North segment (from US 290E to SH 45 N).

Opening Year (2030) and Design Year (2050) daily traffic volume forecasts were developed for the Central segment of the corridor, taking historical growth and Capital Area Metropolitan Organization (CAMPO) 2045 forecasts into account. The traffic analysis will be developed using Texas Department of Transportation (TxDOT) Option C delivery method: District Solely Responsible for Development and Review of Traffic Analysis and Signs/Stamps Final Project (Ref. 2) as part of the Corridor District Exemption Process and Documentation.

Existing 2019 24-hour traffic volumes and AM and PM peak period intersection turning movement counts were collected in April and May 2019 along I-35 to provide a basis for future volume forecasting. Seven-day mainlane counts were collected to obtain a general trend of traffic over a week and to utilize the peak weekday counts for forecasting. The purpose of this memo is to document the methodology used to develop the forecasted traffic projections for the Capital Express Central project.

Study Area

The overall Capital Express project study area consists of the I-35 segment between SH 45 N and SH 45 SE. The project was divided into three segments:

- South: From SH 45 SE to US 290W/SH 71
- Central: From US 290W/SH 71 to US 290E
- North: From US 290E to SH 45 N

New managed lanes, in the form of separated high occupancy vehicle/transit lanes, and geometric improvements are proposed for the corridor as a part of the Capital Express project. The location of each project segmentation of the I-35 project is depicted in Figure 1. The project's area of influence extends beyond the strict project limits to determine effects on cross streets and upstream/downstream interchanges.

This memo is to document the methodology used to develop the forecasted traffic projections for the Central segment only. Traffic projection methodology memoranda for each the North and South segments will be submitted separately.

of Transportation

FIGURE 1

Seven-day mainlane counts for the study area were collected in April and May 2019 and are provided in Table 1. The counts were collected for the Central segment (between 7th and 8th Street, upper and lower decks between Manor Road and MLK Jr. Boulevard) along I-35. Traffic volumes, weather conditions, and the speed heat map data provided by INRIX Traffic and Road Speed Service were reviewed to get critical insight on the "representative" day of data from Tuesday through Thursday and to avoid weather and incident impacts. As a result, the data from Wednesday was not considered due to rainy field conditions. Tuesday was used as the "representative" day for the I-35 lower deck. Traffic volumes on the I-35 upper deck and between 7th and 8th Streets were adjusted to compensate for an incident—Tuesday volumes from 12:00 AM - 8:30 PM and Thursday volumes from 8:30 PM - 12:00 AM were used as "representative" volumes for these locations.

Table 1: Study Area Traffic Volumes

Location	Existing 2019 Volumes (veh/day)
I-35, between 7th and 8th Street*	146,656
I-35, Upper Deck*	72,956
I-35, Lower Deck**	98,197

* Adjusted to account for incident/weather impacts (Tuesday, April 23, 2019 volumes from 12:00 AM - 8:30 PM, Thursday, April 25, 2019 volume from 8:30 PM - 12:00 AM)
** Representative Count Date: April 23, 2019

Traffic Forecasting Methodology

Existing (2019) traffic volumes were used to develop traffic forecasts for Central Segment for the following future year scenarios:

- Opening Year 2030
- Design Year 2050

Forecasted Growth Rates

The traffic volume forecasting incorporates traffic growth trends in the immediate study area. The Statewide Traffic Analysis and Reporting System (STARS II) (Ref. 3) provided historical average annual daily traffic (AADT) counts along I-35 Central segment. Table 2 provides the historical AADTs provided by Texas Department of Transportation (TxDOT) from 2014 to 2018 and the calculated annual average growth rates (AAGR). The counts (2014 – 2018) below indicate the sum of mainlane and frontage road counts at each location. The average annual growth rate on I-35 along the Central segment study area from 2014 to 2018 was computed as 1.2 percent. The historical AADT data from 1998 to 2018 was reviewed to calculate the 20-year annual average growth rates. (The 1998 AADT, unavailable on STARS II, is presented in the Complete Corridor Analysis Package for IH 35 Capital Express (Ref. 4).) In addition, historical 10-year and 15-year growth rates were also reviewed. Table 3 provides the historical 10-year, 15-year, and 20-year AAGRs along the Central segment. The AADTs for the past 20 years and the calculated AAGRs are provided in Appendix A for reference. The historical 20-year average annual growth rate for the Central segment is 0.3 percent.

Table 2: Historical AADTs (Source: STARS II)

Location Along I-35	Station ID	2014	2015	2016	2017	2018	AAGR	Segment AAGR
North of Oltorf Street	227H92A	185,424	180,449	185,578	175,717	175,580	-1.4%	1.2%
South of Holly Street	227SP132	216,040	252,075	202,378	204,235	198,084	-2.1%	
South of 7th Street	227H115A	168,432	176,455	182,216	178,918	178,106	1.4%	
North of 15th Street	227H116	204,528	210,000	215,955	207,725	218,960	1.8%	
North of 41st Street	227H117	205,748	222,006	227,942	224,401	230,443	2.9%	
North of Airport Boulevard	227H118	212,123	232,011	237,937	235,688	237,275	2.8%	
South of US 290E	227H119	214,739	235,863	241,704	231,256	239,347	2.7%	

Table 3: Historical Average Annual Growth Rates

Historical Count Years	AAGR
2008 – 2018	0.4%
2003 – 2018	0.0%
1998 – 2018	0.3%

CAMPO provided traffic volume projections for 2025 and 2045 along I-35 (Ref. 5). Table 4 provides the 2025 and 2045 traffic volume projections by CAMPO for multiple locations along I-35. A simple exponential regression model, represented by a “best-fit equation,” was utilized to compute the growth rates for the CAMPO projections. This methodology uses the model rather than a process of selecting two specific years, so all available data is used to influence the resultant growth rate. Using CAMPO traffic projections, the average annual growth rates from 2015 to 2045 were computed to be 1.49 percent for the Central segment.

Table 4: CAMPO 2025 and 2045 Traffic Projections

Location	2015	2025	2045	Best Fit Line Growth Rate	Average Growth Rate
I-35, at Woodward Street	151,624	166,870	246,257	1.66%	1.49%
I-35, at Oltorf Street	153,808	166,923	243,815	1.59%	
I-35, at Woodland Avenue	163,866	164,359	238,852	1.34%	
I-35, at Riverside Drive	154,655	163,821	237,170	1.49%	
I-35, at Holly Street	175,174	184,559	262,501	1.41%	
I-35, at Cesar Chavez Street	175,174	184,559	262,501	1.41%	
I-35, between 6th and 8th Street	162,811	168,267	240,408	1.37%	
I-35, between 11th and 12th Street	195,100	205,301	283,617	1.30%	
I-35, at 15th Street	172,072	183,296	262,098	1.46%	
I-35, at MLK Jr. Boulevard	172,072	183,296	262,098	1.46%	
I-35, at Manor Road	196,881	211,624	315,269	1.63%	
I-35, at Dean Keeton Street	199,952	214,874	319,040	1.62%	
I-35, at 38 ½ Street	214,282	227,728	336,776	1.57%	
I-35, at Airport Boulevard	196,189	203,345	296,247	1.45%	
I-35, north of 51st Street	110,037	126,661	184,968	1.75%	
I-35, at US 290E	177,225	188,563	258,580	1.30%	

The TxDOT Statewide Planning Map (Ref. 6) provided the forecasted 2037 AADTs for locations along I-35. The 2037 projections and the calculated annual growth rates are illustrated in Table 5. The growth rates utilized by TxDOT for the 2037 AADT projections were calculated to be 2.0 percent on I-35.

Table 5: TxDOT AADT Projections (Source: TxDOT Statewide Planning Map)

Location	2017	2037	Annual Growth Rate
I-35, south of Riverside Drive	152,367	213,310	2.0%
I-35, north of Riverside Drive	142,766	199,870	2.0%
I-35, south of 8th Street	157,878	221,030	2.0%
I-35, north of 8th Street	176,987	247,780	2.0%
I-35, south of Dean Keeton Street	201,974	282,760	2.0%
I-35, north of Airport Boulevard	195,900	274,260	2.0%
I-35, south of US 290	193,522	236,100	2.0%

I-35 Volume Forecasts

Alliance Transportation Group (ATG) provided a forecasting methodology memorandum in 2018 as a supplement to the I-35 Capital Express corridor package (Ref. 4). The memo proposed growth rates for the Central project segment, and these growth rates were approved by TxDOT. The recommended growth rates were derived from the data specific to the Central segment and tailored to account for patterns associated with each forecast year, as indicated by the historical AADTs and CAMPO forecasts. Table 6 provides the approved growth rates towards the Opening Year (2030), Design Year (2050), and any study years beyond Design Year (2050), utilizing 2016 as the Base Year. A linear annual growth rate of 1.5 percent was proposed to be applied to the Base (2016) volumes to forecast the Opening Year (2030) and Design Year (2050) traffic volumes for the I-35 Central segment. The ATG forecasting memorandum with the approved growth rates is provided in Appendix A for reference. The forecasted line diagrams for the Existing, No-Build, Alternative 2, and Alternative 3 MOD configurations are also in Appendix A. The Alternative 3 MOD depends on direction of travel changes along 8th Street (from westbound to eastbound) and 7th Street (from eastbound to bidirectional), west of I-35. An email confirming Austin Transportation Department's support of the model assumptions regarding 8th and 7th Streets is in Appendix B.

Table 6: I-35 Proposed Growth Rates (Approved by TxDOT)

Period	Recommended Growth Rate
2016 – 2030 (14 Years)	1.5%
2016 – 2050 (<=34 Years)	1.5%
2050+ (>=34 Years)	1.0%

Table 7 provides the existing daily volumes along I-35 mainlanes (shown previously in Table 1) along with 2030 and 2050 daily traffic volume forecasts (Ref. 4).

Table 7: I-35 Daily Traffic Volume Summary

Location	Existing 2019 Volumes (veh/day)	Opening Year 2030 Volumes (veh/day)	Design Year 2050 Volumes (veh/day)
I-35, between 7th and 8th Street	146,656	191,000	238,350
I-35, Upper Deck	72,956	90,300	112,650
I-35, Lower Deck	98,197	121,100	151,050

Table 8 provides the calculated growth rates from the Existing Year (2019) to Opening Year (2030) and Design Year (2050), based on the proposed growth rates by ATG using 2016 as the Base Year.

Table 8: Calculated I-35 Growth Rates from Existing Year to Opening Year and Design Year

Period	Calculated Growth Rate
2019 – 2030 (11 Years)	1.4%
2030 – 2050 (20 Years)	1.2%

Although the 2030 and 2050 forecasts use a 2016 Base Year, the 2019 traffic counts show that the approved forecasts are not significantly out of line with current trends. Linear growth rates (with a 2019 Base Year) from existing 2019 counts to the 2030 and 2050 forecasts are generally lower—between 1.2 percent and 1.4 percent—than those (with a 2016 Base Year) listed in Table 8. Due to capacity constraints along I-35, however, the existing 2019 counts may be lower than the demand, resulting in higher linear growth rates with the 2019 Base Year.

Conclusion

Based on a review of historical trends, 2019 traffic counts, and CAMPO forecasts, the growth rates (with a 2016 Base Year) provided by ATG (in Appendix A to this memorandum) and approved by TxDOT are still valid and will be utilized to forecast Opening Year (2030) and Design Year (2050) daily, AM peak, and PM peak volumes. Existing (2019) traffic volumes were used to develop traffic forecasts for the Opening and Design years. The proposed growth rates were derived from the data specific to Central Segment and tailored to account for patterns associated with each forecast year, as indicated by the historical AADTs and CAMPO forecasts.

An annual growth rate of 1.5 percent is recommended to be utilized to project the Opening Year 2030 traffic volumes (2016 – 2030) and to project the Design Year 2050 volumes (2016 – 2050), and 1.0 percent is recommended to be utilized to project the Horizon Year (2050+) volumes along the I-35 Central section (SH 71 to US 290) for this study. The recommended annual growth rates translate to an approximate increase of 15 percent traffic volumes between 2019 and 2030 and 45 percent between 2019 and 2050 for the central segment.

MEMORANDUM

DATE: October 24, 2018
TO: Adam Kaliszewski, TxDOT-Austin District
CC: Janie Temple, TxDOT-TPP; Brandon Marshall, TxDOT-Austin District
FROM: Mike Chaney, Alliance Transportation Group, Inc. (ATG)

RE: Complete Corridor Analysis Package for IH 35 Capital Express (CSJ 0015-13-388, etc)

This memo provides the Complete Corridor Analysis 2018 Existing Configuration Package for Interstate 35 (IH 35) Capital Express (CSJ 0015-13-388, etc) and background information designed to support a review of the analysis.

The subject project consists of IH 35 from State Highway 45 (SH 45N) in Round Rock, Texas to State Highway (SH 45SE) terminus near Buda, Texas, a distance of approximately 27 miles. The project was divided into three segments that are being developed by three project teams:

- North: From SH 45N to US Highway 290 (US 290)
- Central: From US 290 to State Highway 71 (SH 71)
- South: From SH 71 to SH 45SE

To support the analysis of air and noise this forecast of 2018 traffic volumes was developed from the TP&P provided 2016 base year counts and delivered to TxDOT ahead of other forecast years. This forecast includes the existing geometric configurations for 2018 and is referred to as 2018 Existing.

Below is a list of projects, opened to traffic between 2016 and 2018, and included in the 2018 Existing forecast:

- 51st Street Roundabout and Ramp Improvements
- Slaughter Creek Overpass Bridge Replacement

The following documents are included in the IH 35 Capital Express corridor package:

- Directional Traffic Volume Diagrams depicting 2018 Existing forecasted volumes
- Appendix A: Forecast Methodology Memo
- Appendix B: District Traffic request and previous projects provided for this analysis

After TxDOT's review and cutline selection, Corridor Analysis Worksheets and Traffic Analysis for Highway Design (TAHD) forms for each section will be created and submitted with an updated final package. The TAHD form contains, for each cutline, the percentage of trucks, K-factor, direction distribution, data for air and noise analysis, and ESAL's.

It should be noted that the mainlane volumes along US 290/Koenig Lane are forecasted off 2016 counts that are considered still under review. These forecasted volumes are subject to change due TxDOT's Transportation Planning and Programming division review of the 2016 counts available in the STARSii database

Growth Rate Analysis Results

Alliance Transportation Group (ATG) utilized historical annual average traffic growth rates (AAGR) calculated by TXDOT and provided in the corridor analysis information packet for this project and relative growth conveyed in forecast year scenarios conducted with the MPOs' travel demand model (TDM) to determine the rate of growth in traffic volumes on IH 35. This information is described below.

As shown in **Table 1**, ATG utilized growth rates derived from data specific to each of the three project segments and tailored to account for patterns associated with each forecast year. Further discussion of growth rate analysis is included in the methodology memo (**Appendix A**).

Table 1. Growth Rates Utilized in IH 35 Traffic Projections

Segment	Growth Rate (AAGR)			
	2016 - 2018	2016 - 2030	2030 - 2050	2050 - 2060
North: From SH 45N to US 290	2.0%	2.0%	2.0%	1.0%
Central: From US 290 to SH 71	1.5%	1.5%	1.5%	1.0%
South: From SH 71 to SH 45SE	2.0%	2.0%	2.0%	1.0%

Table 2 below displays the rate of traffic growth derived from historical count information and the traffic volumes from the TDM at matching locations. The table compares annual historical growth observed in the corridor and the growth forecasted in the No Build and Build TDM scenarios. This growth comparison is duplicated in map form in **Figure 1**. The TDM and historic count data both indicate more growth in the northern and southern sections of the project area, compared to the central section. Similarly, because of increased capacity, the Build scenario shows slightly higher traffic volumes compared to the future No Build Scenario.

Table 2. Historical Count Growth (AAGR) and TDM Volume Growth (AAGR)

Segment	Location	Historical Count Growth (AAGR)			TDM Volume Growth (AAGR)				
		Count Station ID	Historical Count Years	Historical Traffic Growth (AAGR)	2015 TDM Traffic Volume	2040 TDM Traffic Volume (No Build)	2040 TDM Traffic Volume (Build)	2015-2040 TDM Traffic Volume Growth (AAGR) (No Build)	2015-2040 TDM Traffic Volume Growth (AAGR) (Build)
North	Picadilly Dr	227H5	1996-2016	1.3%	167,073	200,448	213,034	0.8%	1.1%
North	Korman Dr	227H4	1996-2016	1.3%	165,453	209,266	227,496	1.1%	1.5%
North	E Rundberg Ln	227H13	1996-2016	0.7%	179,651	208,229	205,073	0.6%	0.6%
Central	Reinli St	227H119	2001-2016	0.2%	261,392	287,478	328,519	0.4%	1.0%
Central	E 41st St	227H117	2001-2016	0.8%	242,217	289,913	328,824	0.8%	1.4%
Central	Mariposa Dr	227H92A	2001-2016	0.4%	202,157	234,812	275,695	0.6%	1.5%
South	Shelby Ln	227H94	1996-2016	1.3%	199,722	255,680	290,438	1.1%	1.8%
South	Foremost Dr	227H95	1996-2016	2.2%	174,525	197,318	215,568	0.5%	0.9%
South	Onion Creek Pkwy	227SP4	1996-2016	2.1%	161,268	197,334	211,907	0.9%	1.3%

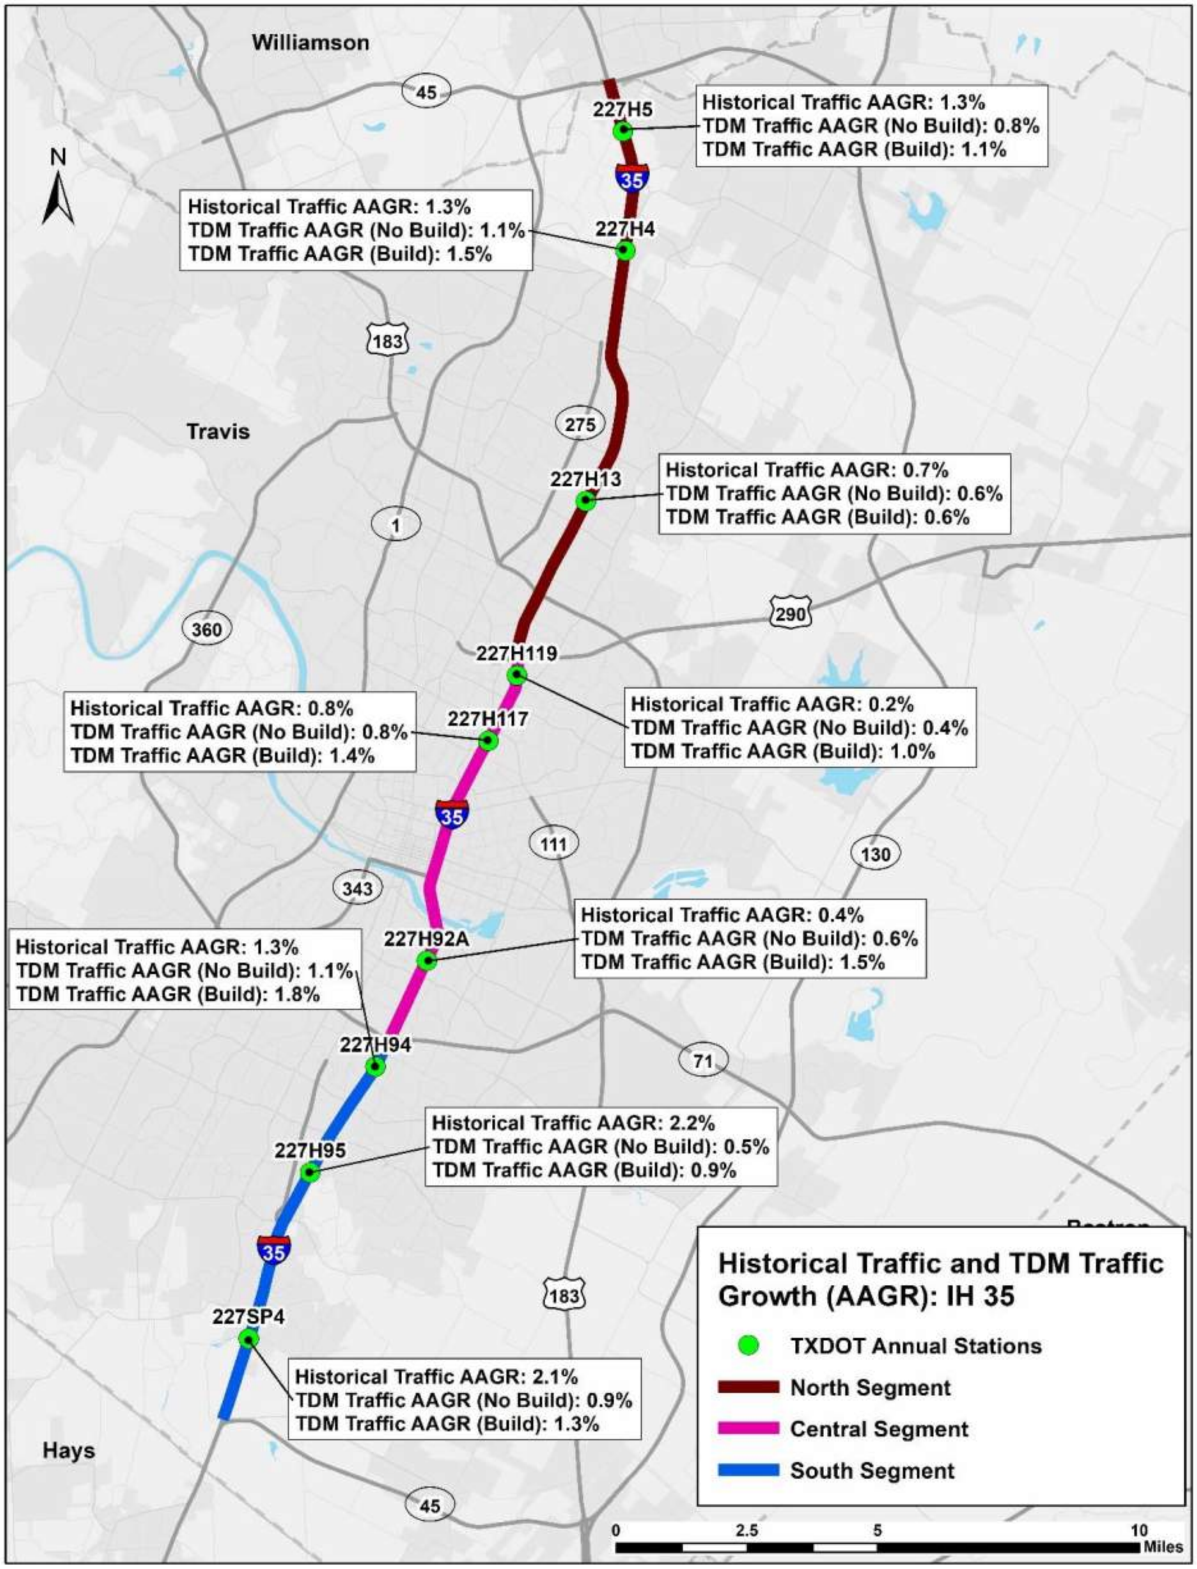

Figure 1. Historical Traffic Growth (AAGR) & 2015-2040 TDM Traffic Volume Growth (AAGR)

Figure 2 depicts the average annual TDM population and employment growth (AAGR) in the neighboring areas along the north, central and south segments of the IH 35 project corridor as presented in **Table 3**.

Table 3. Demographic Growth (AAGR) in the CAMPO TDM (2015-2040)

Segment	Average Annual Growth Rates (AAGR)	
	Population	Employment
Neighboring Areas along North Segment	2.0%	5.7%
Neighboring Areas along Central Segment	2.2%	2.4%
Neighboring Areas along South Segment	2.3%	4.0%

The areas along the central segment are well developed compared to the areas along north and south segments, where more undeveloped land will lead to more significant growth in the future.

IH 35 within the project area is expected to continue to serve as a major corridor and provide connectivity to the project area that is experiencing consistent and sustainable growth. The analysis of historic counts, planned demographic growth and TDM volumes revealed that growth is higher in the north and south segments of the project corridor compared to the central segment which runs through the Downtown Austin area. The central segment includes the highest traffic volumes currently and a lower growth rate results in significant absolute gains in traffic volumes.

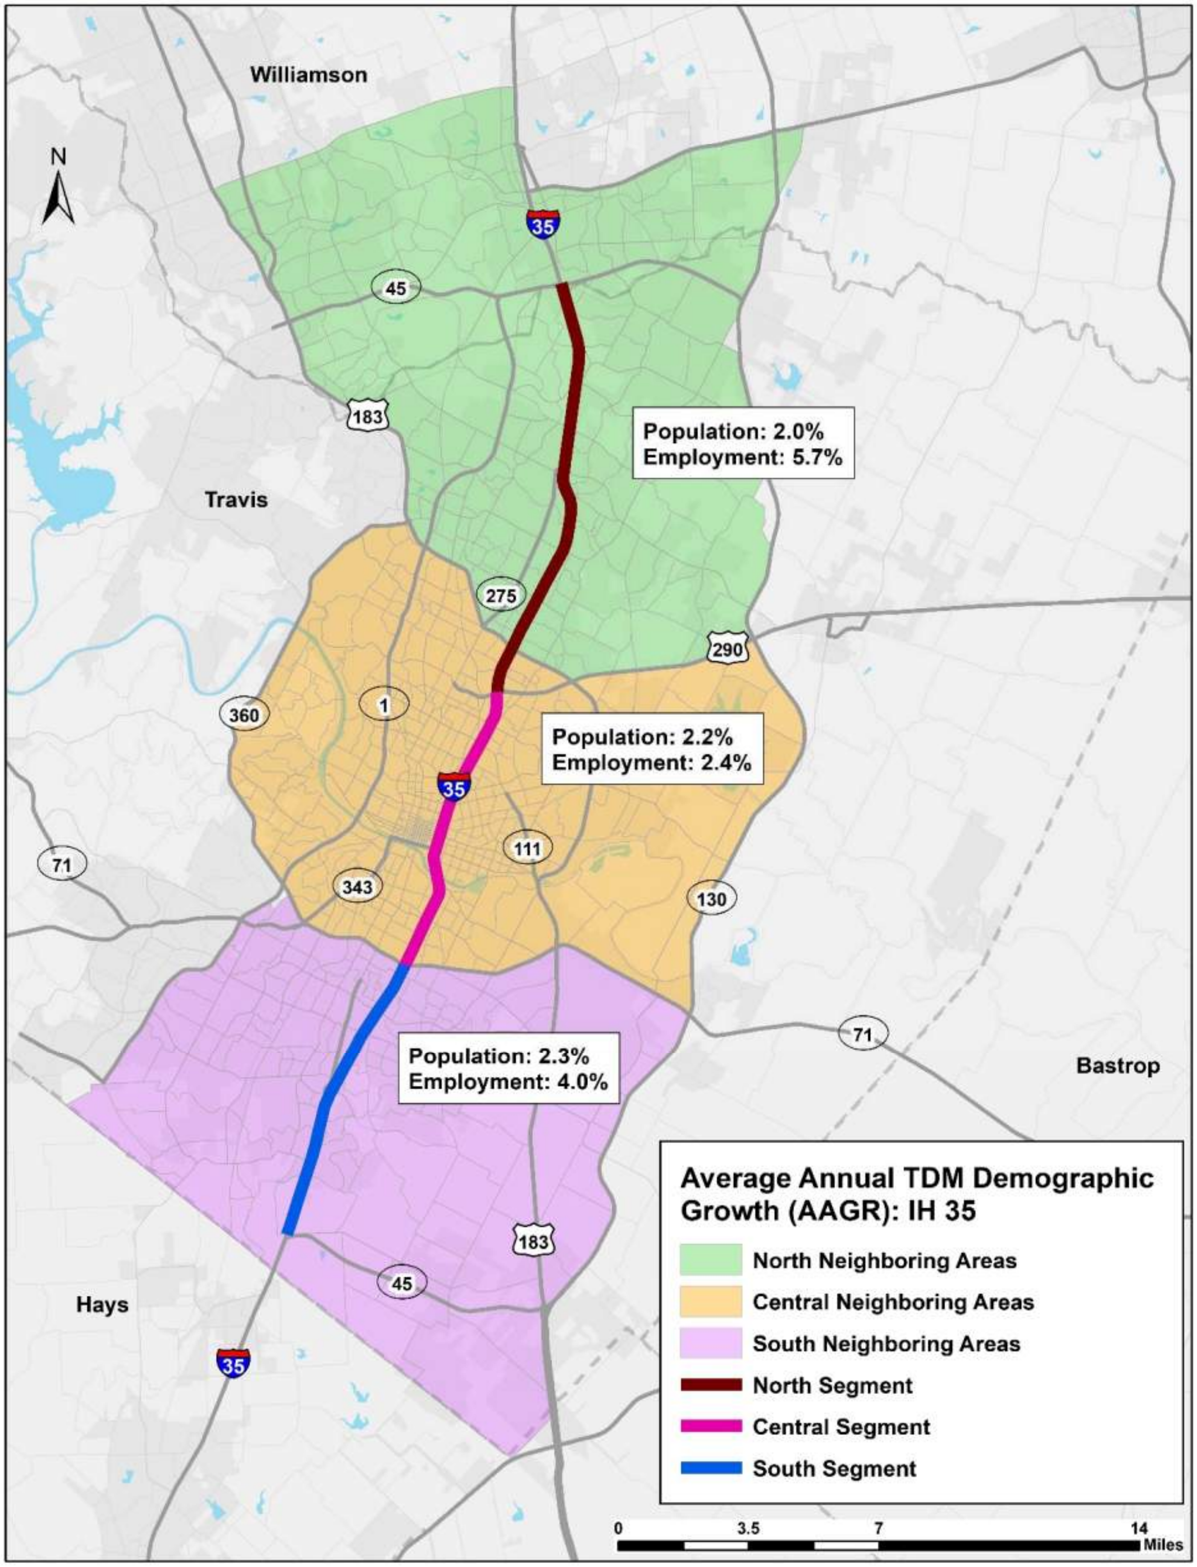

Figure 2. 2015-2040 TDM Demographic Growth (AAGR) Along the IH 35 Project Corridor

Effects of Corridor Improvements

The recently opened 51st Street and Slaughter Creek improvements are included as a part of the 2018 Existing forecast and have shifted travel patterns as new routes have become more attractive and traffic volumes have changed along the project corridor. ATG utilized CAMPO's travel demand model, recent counts, and engineering judgement to forecast the effects of these improvements. The process detailed in TxDOT TP&P's Corridor Analysis Standard Operating Procedure (SOP) was followed to complete the diversion necessary to build up traffic to reflect a 2018 with improvements condition.

CC: Janie Temple, TxDOT-TPP; Brandon Marshall, TxDOT- Austin District
FROM: Mike Chaney, Alliance Transportation Group, Inc.
RE: Traffic Forecasting Methodology for IH 35 Capital Express

---

This memorandum describes procedures used to forecast traffic volumes that will be incorporated into the design and development of Interstate 35 (IH 35) Capital Express project in Travis County. These traffic volumes are forecasted to support the independent segment teams designing the proposed roadway improvements. The traffic forecasts will be used for pavement design, operational analysis, as well as air and noise analysis.

TxDOT's Austin District requested forecasted traffic volumes for pavement design and air and noise analysis along IH 35. Districts have three options when requesting traffic data: (A) a request is made to TxDOT's Transportation Planning & Programming Division (TPP) to generate traffic data and TPP will then sign and seal the project, (B) a request is made to TPP to assist in the development of future traffic volumes and TPP will then sign and seal the project, or (C) the respective TxDOT district is responsible for the development of the future volumes and the District will then sign and seal the project. As the IH 35 project includes both High Occupancy Vehicles (HOV) and transit components, TPP's guidance is the project utilize Option C to develop the required future year volumes.

The following sections describe the process and merits of the analysis that will be employed by Alliance Transportation Group, Inc. (ATG).

Corridor Analysis Process

Once the Consultant Corridor Packet (CCP) is received, the provided data, available regional travel demand model (TDM), and additional count data from TxDOT databases will be inventoried and processed to begin the corridor analysis procedure. After the data has been aggregated, the subsequent step, described below, will follow the Corridor Analysis Standard Operating Procedures (SOP) created by TPP in February 2017.

These count data will be used to develop the base year working map volumes. The next step will use these base year volumes to calculate the Straight Line Analysis volumes, and subsequent amendments and diversions will be made by following methodologies described in the SOP, using engineering judgement, and accounting for effects on traffic patterns observed with the TDM. Once balanced, these base year volumes will be used as a basis for the requested future year forecasts. Subsequently, the base year volumes will also serve to calculate Complete Corridor Analysis volumes with a similar amendment and diversion process following. Once balanced, these base year volumes will inform the requested future year forecasts and deliverables unique to the Complete Corridor Analysis.

Project Details

The project area consists of IH 35 from SH 45SE near Buda, Texas, to SH 45N in Round Rock, Texas, a distance of approximately 27 miles. The project was divided into three segments that are being developed by three project teams:

- South: From SH 45SE to SH 71
- Central: From SH 71 to US 290
- North: From US 290 to SH 45N

New Managed Lanes, in the form of barrier separated HOV lanes, and geometric improvements will be proposed for the corridor as a part of the Capital Express project. The project also includes forecasted volumes for 2030 and 2050.

The location and project team segmentation of the IH 35 project is depicted in the **Figure 1** on the following page.

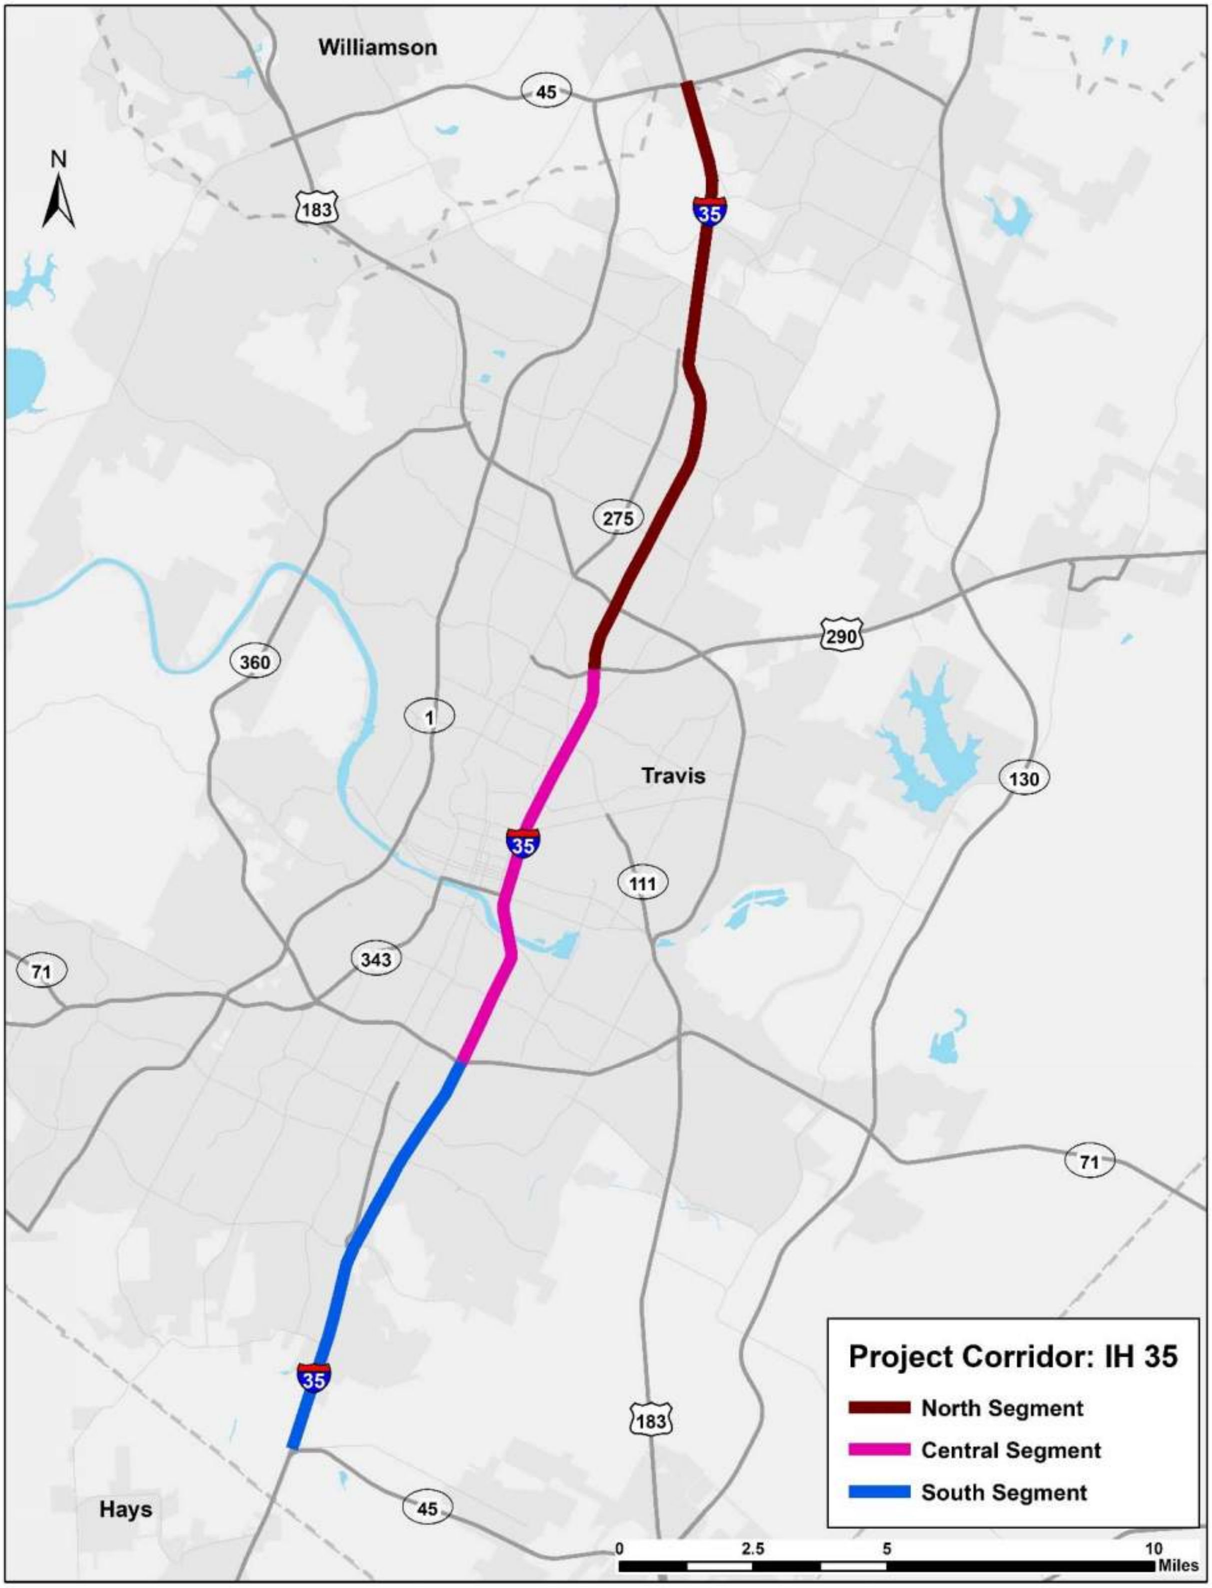

Figure 1: IH 35 Project Limits

Forecasting Future Year Volumes

The following sections detail the available data, describe the review of the TDM, and discuss future steps, which will employ SOP methodologies, and the TDM to forecast future year volumes.

Available Data Sources

Several data sources will be used to determine growth in the project area and develop forecast year traffic volumes. The following sections describe the data available for use and consideration in forecasting future year volumes.

Traffic Counts

Two different traffic count sources will be used to develop a balanced 2016 volume to be used in representing the base year traffic conditions. This data was provided by TxDOT in the CCP and collected in 2016. Count locations include the following types of counts:

- 2016 TxDOT Annual Counts (obtained from the STARS II website and the CCP)
  - 2015 TxDOT Annual Counts (obtained from the STARS II website) will be utilized where 2016 data does not exist
- 2016, 2017, and 2018 Collected Traffic Movement Counts and Tube Counts
  - 2016 Locations and Types
    - Ramps, Mainlanes, and TMCs
    - Spots locations north of Riverside to University Boulevard
  - 2017 Locations and Types
    - Ramps, Mainlanes, and TMCs
    - Spot locations from SH 45 SE to Westinghouse while school is in session, spot locations from SH 45 SE to University Boulevard during the summer
  - 2018 Locations and Types
    - Ramps, Mainlanes, and TMCs
    - Spot locations between 4th Street and Westinghouse

Permanent and Classification Count Locations

The analysis will use the TxDOT Permanent Count Stations on or near the corridor to determine the directional distribution and peak hour factor. Similarly, nearby TxDOT Vehicle Classification Count Stations will determine the heavy vehicle percentages along the corridor. The Traffic Analysis for Highway Design (TAHD) worksheet included with the final traffic forecast will identify these stations.

Historical Counts

Historical traffic count information (1996 to 2016) provided by TXDOT-TPP were used in a linear regression analysis of traffic growth. **Table 1** depicts the resulting historical annual average traffic growth rates (AAGR) calculated by TXDOT and provided in the corridor analysis information packet for this project. The annual stations used in TXDOT's historical linear growth rate analysis are presented in **Figure 2**. The resulting historical average growth rates will inform the selection of growth rates for use in forecasting traffic on the IH 35 facility. These figures will be recalculated to include the 2017 count data recently made available by TPP.

Note that the SH-130 segments 1 to 4 opened between 2006 and 2008, segments 5 & 6 opened in 2012, and the Mopac express lanes opened in 2018.

Table 1: Historical Average Annual Growth Rate along IH 35

Count Station ID	Growth Rate (AAGR)			Total Change in Traffic Count	Data Years
	Low	Forecast	High		
246H51	0.8%	1.6%	2.3%	44,654	1996-2016
246H27	1.2%	2.1%	3.1%	67,310	1996-2016

227H118	-1.5%	-0.9%	-0.3%	(7,063)	2001-2016
227H117	-1.2%	0.8%	2.7%	(5,058)	2001-2016
227H116	-0.7%	-0.1%	0.6%	(1,079)	2002-2016
227H115A	-1.9%	-1.2%	-0.4%	(18,784)	2001-2016
227SP132	-0.6%	0.1%	0.7%	3,378	1996-2016
227H92A	0.0%	0.4%	0.8%	9,578	2001-2016
227H92	0.2%	0.7%	1.2%	19,775	1996-2016
227H94	0.5%	1.3%	2.1%	65,550	1996-2016
227H94A	0.9%	1.5%	2.1%	57,177	1996-2016
227H95	1.3%	2.2%	3.1%	76,597	1996-2016
227D8	-3.2%	0.7%	4.6%	13,118	1996-2012
227SP4	1.3%	2.1%	2.9%	63,188	1996-2016
227H82A	1.5%	2.5%	3.5%	82,700	1996-2016

Table 2: Average Change in Traffic Per Year by Segment

Project Segment	Data Years	Average Change in Traffic Count	Minimum Change in Traffic Count	Maximum Change in Traffic Count
North	1996-2016	2,874	1,947	3,425
Central	2001-2016	46	(1,252)	1,654
South	1996-2016	3,281	2,859	3,830

Table 2 presents the average change in traffic counts for each project segment. In this table, 2001 to 2016 count information were used for the central segment because most count locations had data available for these years in the corridor analysis information packet provided by TXDOT-TPP. The central segment has the lowest yearly average change in traffic counts.

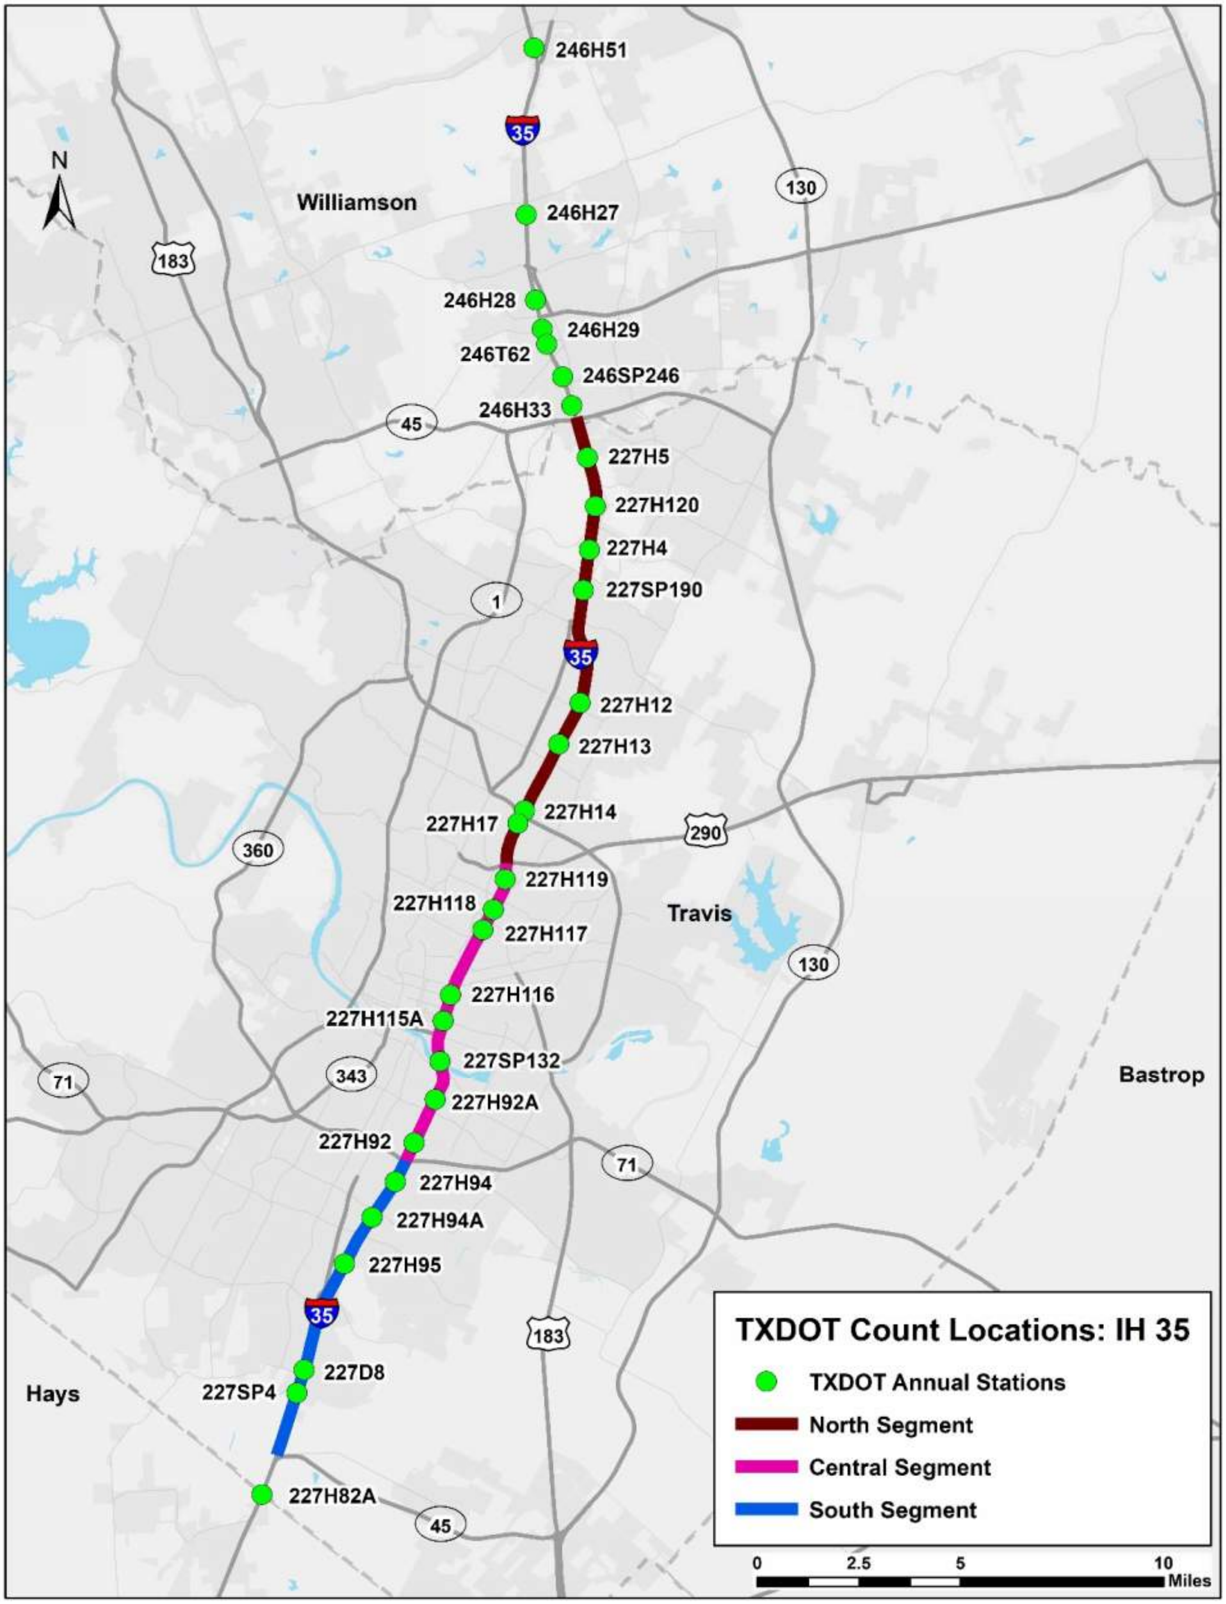

Figure 2: TXDOT Count Locations along IH 35

Figure 3 presents the “forecast” or mid-level growth rates produced with TPP’s regression analysis and depicted in **Table 1.** The historic growth rate is depicted in several ranges of growth at traffic count locations along IH 35. Higher rates of growth are seen in the north and south segments where traffic volumes are lower than observed in the central segment.

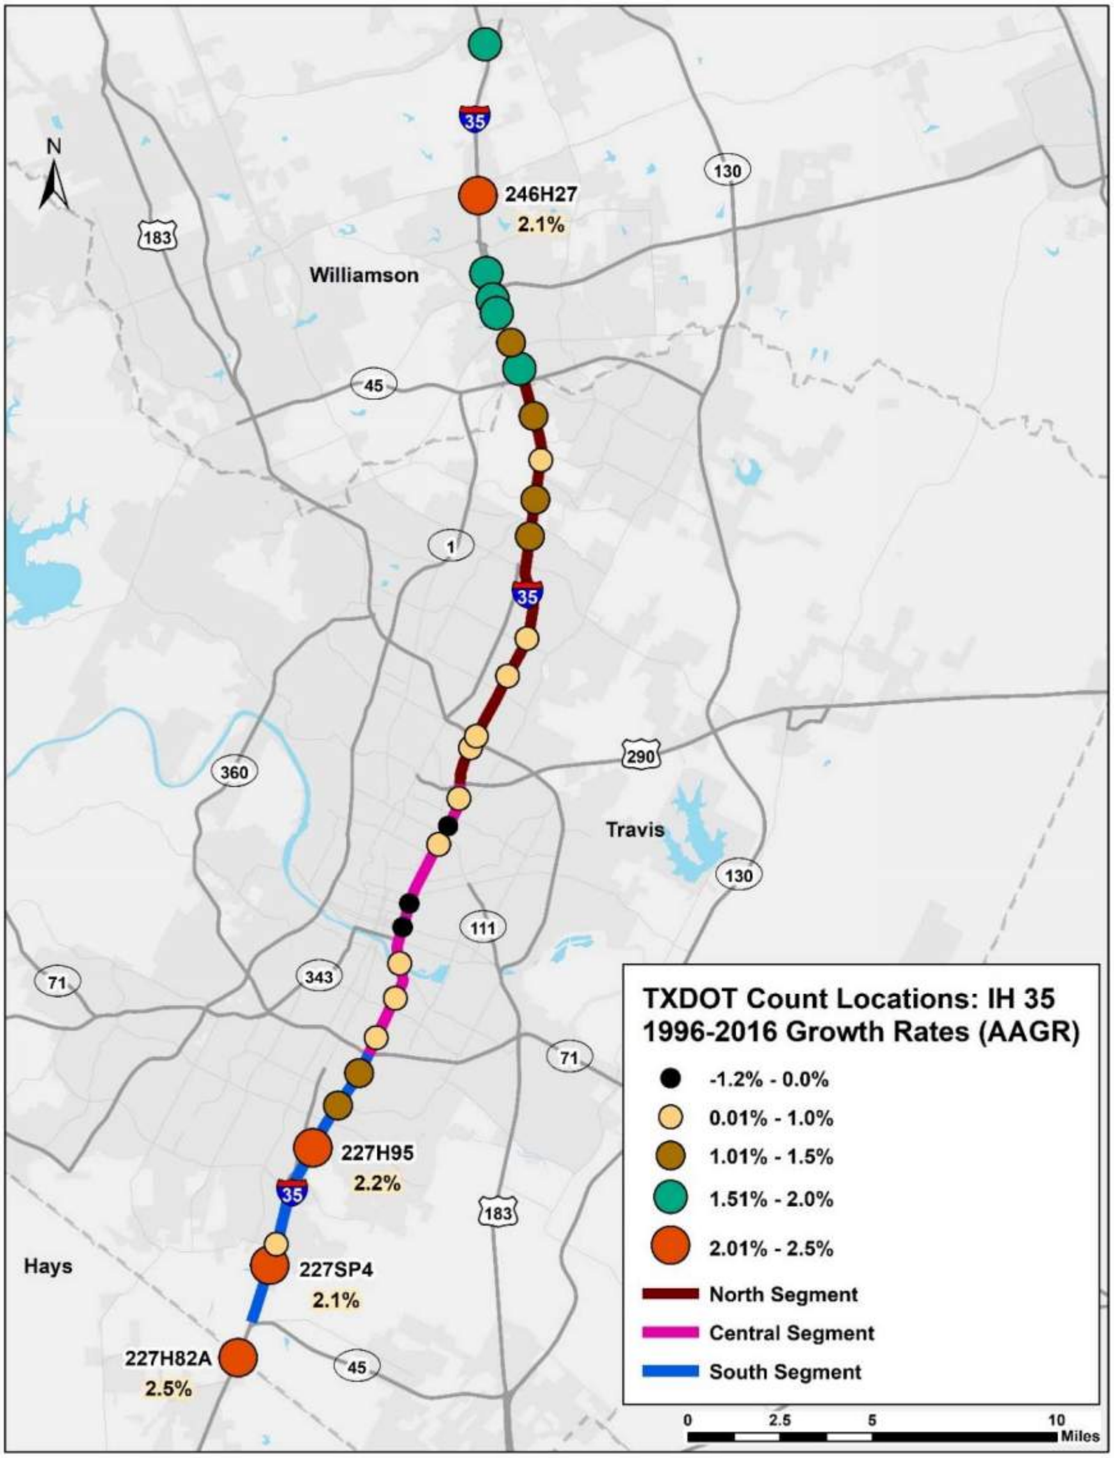

Figure 3: Historical Annual Average Growth Rates

Traffic Demand Model Review

The 2010 and 2040 CAMPO Travel Demand Model (TDM) scenarios used in this analysis were produced with the latest adopted regional TDM, which includes both roadway and transit networks that reflect the adopted 2040 MTP. Below, the 2010 scenario volumes are compared against 2010 traffic counts to gauge how valid the CAMPO TDM is along the IH 35 corridor. In addition, the 2010 and 2040 scenarios are compared to gauge relative growth along the corridor.

Count to TDM Comparison

Table 3 below depicts this model volume to count comparison sorted by locations along the study corridor, and **Table 4** shows the same comparison by aggregated links. **Table 3** represents counts and volumes summed by cutline for both main-lane and frontage roadways. While **Table 4** aggregates individual links by facility along the corridor.

Table 3: Count to TDM Volume Comparison Cutline

Roadway	Location	2010 Count	2010 TDM Volume	Count to Volume Difference	% Difference
IH 35	SH 45	132,600	154,505	21,905	17%
IH 35	Onion Creek Pkwy	122,385	145,387	23,002	19%
IH 35	William Cannon	148,909	158,544	9,635	6%
IH 35	Stassney	161,900	173,276	11,376	7%
IH 35	SH 71	181,571	175,294	-6,277	-3%
IH 35	Lady Bird lake	176,187	199,561	23,374	13%
IH 35	Airport	230,065	253,497	23,432	10%
IH 35	Braker	165,458	164,888	-570	0%
IH 35	Grand Ave	161,150	150,908	-10,242	-6%

Table 4: Count to TDM Volume Comparison Aggregated Links

IH 35 Facility	County	2010 Count	2010 TDM Volume	Count to Volume Difference	% Difference
Main	Travis	3,056,159	3,092,170	36,011	1%
Frontage	Travis	666,204	782,448	116,244	17%
Ramp	Travis	753,272	774,405	21,133	3%
	Total Travis	***4,475,635***	***4,649,023***	***173,388***	***4%***

The data comparisons above show the CAMPO TDM to be well validated along the IH 35 corridor. Additional TDM and demographic comparisons are described below to help further evaluate the model.

Base Year to Future Year Model Relative Growth

2010 and 2040 TDM Volumes were compared along the corridor to calculate relative growth between the model scenarios. **Table 5** below depicts selected volumes for each TDM year and the corresponding relative growth at the location. Similar to the count and volume comparison above, **Table 5** shows the summation of available main-lane, and frontage volumes.

Table 5: Relative Model Growth along IH 35 Study Corridor

Roadway	Location	2010 Count	2040 TDM Volume	Count to Volume Difference	Linear Annual Growth Rate
IH 35	SH 45	132,600	250,328	117,728	3%
IH 35	Onion Creek Pkwy	122,385	226,003	103,618	3%
IH 35	William Cannon	148,909	233,003	84,094	2%
IH 35	Stassney	161,900	277,946	116,046	2%
IH 35	SH 71	181,571	246,550	64,979	1%
IH 35	Lady Bird lake	176,187	313,531	137,344	3%
IH 35	Airport	230,065	333,864	103,799	2%
IH 35	Braker	165,458	240,910	75,452	2%
IH 35	Grand Ave	161,150	229,611	68,461	1%

The CAMPO TDM shows reasonable growth (1%-3%) along IH 35 given the already congested conditions along the corridor.

CAMPO Demographics

2010 demographic data were reviewed in comparison with the CAMPO TDM, Census Estimates, Bureau of Labor Statistics (BLS) data, and Texas Demographic Center (TDC) data, to verify accuracy within the TDM. **Table 6** compares the TDM population and employment levels to the several published sources indicated above. The TDM demographics were found to be reasonably accurate for 2010.

Table 6: Travis and Williamson County 2010 Population and Employment Comparison

Reference	CAMPO TDM		Census Estimate	TDC	BLS
Location	Population	Employment	Population	Population	Employment
Travis	1,001,490	564,517	1,024,266	1,024,000	576,500

Table 7 presents the CAGR (Compound Annual Growth Rate) for population and employment in Travis County from 2010 to 2040. Given recent demographic trends of Travis County, the CAMPO TDM socioeconomic forecast represents reasonable growth for the county containing the project area.

Table 7: Demographic County Growth

Location	Item	2010 to 2040
Travis County	Population	1.8%
	Employment	2.5%

Model Validation

The CAMPO TDM is realistically capable of capturing local travel patterns along the study corridor as demonstrated by the count to volume tables above (**Tables 3-7**). Demographics within the counties is reasonable and similar to those found in 3rd party demographic estimates (**Table 6**). Therefore, based on the aforementioned findings and discussions, it can be inferred that the CAMPO TDM is adequately validated and will serve as a useful tool in forecasting traffic volumes and relative growth in traffic along the project corridor. The TDM has the ability to identify high occupancy vehicles and allocates trips to a mode of travel based upon travel time and cost incurred for the trip.

Forecast Year Traffic Volume Development

Future year traffic volumes will be developed by using the methodologies outlined in the SOP in conjunction with TDM input and professional judgement. A growth rate based on historical traffic counts will be derived using a year-over-year methodology and long-term growth rate analysis with outlier data omitted. Forecasted 24-hour baseline segment volume projections will be based on these growth rate(s) derived from historical traffic counts and consideration of TDM volumes, as discussed above. The recommended growth rates from this evaluation and the directional and classification factors from available permanent and classification stations will be conveyed in the TAHD worksheet submitted with the developed volumes.

The SOP will be used to determine 24-hour projected turning movement volumes. Turning movements and through movements at all major intersections along the corridor will be forecasted using the three-legged and four-legged methodologies outlined in the SOP. Amendments to these volumes will be evaluated and implemented based on nearby trip attractors. After the amendment and diversion process, the volumes will then be balanced based on SOP methodologies.

The projected traffic volumes for the corridor will be developed based on TPP's SOP for the proposed geometry of the schematic layout. The analysis will produce 2030 and 2050 forecast volumes, as requested. The magnitude of trips in the HOV lane and ridership on transit in the corridor will rely upon forecasting with the regional TDM. Vehicle classification and percent trucks will be determined based on collected counts and available TxDOT traffic data. Additional DHV factors will be applied to the forecasted volumes to develop forecast volumes for the operational analysis.

MEMO

June 5, 2018

To: Terry G. McCoy, P.E., District Engineer
Attention: Lorena E. Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E.
Traffic Analysis Section Director, TPP

From: James Burnett
Planner, TPP

Subject: Traffic Data
CSJ: 0015-13-388, etc
I-35:
From RM 1431
To SH 45SE
Travis and Williamson Counties

Attached is a corridor analysis information packet for CSJ 0015-13-388, etc. Please refer to your original request dated December 1, 2017. The methodology memorandum dated December 20, 2017, attached with your above mentioned request has been reviewed, resulting in the following comments:

1) TPP typically does not reference travel demand models for developing traffic projections, so all "Travel Demand Model" and/or "TDM" related statements, contexts, and/or tables should be removed from the methodology memorandum.

2) TPP typically does not produce traffic data and projections for express lanes, so all statements and/or contexts related to "express lanes" should be removed from the methodology memorandum.

3) Currently 2016 is the count year from which TPP projects traffic volumes, so any statements and/or contexts with respect to 2017 being the "base" year from which traffic projections will be initiated need to be amended to 2016 being the "count" year from which traffic projections will be initiated.

4) The Historic Counts section of the methodology memorandum mentions referencing historic traffic data from STARS II which does not have 20 years of data. TPP uses 20 year regression analysis for determining growth rates, and this corridor packet includes the growth rates to be used for this project, so the Historic Counts section of the methodology memorandum needs to be amended to state that exclusively the growth rates provided with this corridor packet will be used for developing the traffic projections, and forecast years' traffic volumes for this project.

If you have any questions or need additional information, please contact James Burnett at (512) 486-5165.

FROM: Mike Chaney, Alliance Transportation Group, Inc.
RE: Traffic Forecasting Methodology for IH 35 Capital Express

---

This memorandum describes procedures used to forecast traffic volumes that will be incorporated into the design and development of Interstate 35 (IH 35) Capital Express project in Travis and Williamson Counties. These traffic volumes are forecasted to support the independent segment teams designing the proposed roadway improvements. The traffic forecasts will be used for pavement design, operational analysis, as well as air and noise analysis.

TxDOT's Austin District requested forecasted traffic volumes for pavement design and air and noise analysis along IH 35. Districts have three options when requesting traffic data:
(A) a request is made to TxDOT's Transportation Planning & Programming Division (TPP) to generate traffic data and TPP will then sign and seal the project, (B) a request is made to TPP to assist in the development of future traffic volumes and TPP will then sign and seal the project, or (C) the respective TxDOT district is responsible for the development of the future volumes and the District will then sign and seal the project. For this project, Option B is being used to develop future year volumes.

The following sections describe the process and merits of the analysis that will be employed by Alliance Transportation Group, Inc. (ATG).

Corridor Analysis Process

Once the Consultant Corridor Packet (CCP) is received, the provided data, available regional travel demand model (TDM), and additional count data from TxDOT databases will be inventoried and processed to begin the corridor analysis procedure. After the data has been aggregated, the subsequent step, described below, will follow the Corridor Analysis Standard Operating Procedures (SOP) created by TPP in February 2017.

These count data will be used to develop the base year working map volumes. The next step will use these base year volumes to calculate the Straight Line Analysis volumes, and subsequent amendments and diversions will be made by following methodologies described in the SOP, using engineering judgement, and accounting for effects on traffic patterns observed with the TDM. Once balanced, these base year volumes will be used as a basis for the requested future year forecasts. Subsequently, the base year volumes will also serve to calculate Complete Corridor Analysis volumes with a similar amendment and diversion process following. Once balanced, these base year volumes will inform the requested future year forecasts and deliverables unique to the Complete Corridor Analysis.

Project Details

The project area consists of IH 35 from SH 45 near Buda, Texas, to RM 1431 in Round Rock, Texas, a distance of approximately 33 miles. The project was divided into three segments that are being developed by three project teams:

- South10: From SH 45SE to Lady Bird Lake
- Central7: From Lady Bird Lake to US 183
- North16: From US 183 to RM 1431

Express Lanes and geometric improvements will be proposed for the corridor as a part of the Capital Express project. The project also includes forecasted volumes for 2030 and 2050.

The location and project team segmentation of the IH 35 project is depicted in the **Figure 1** on the following page.

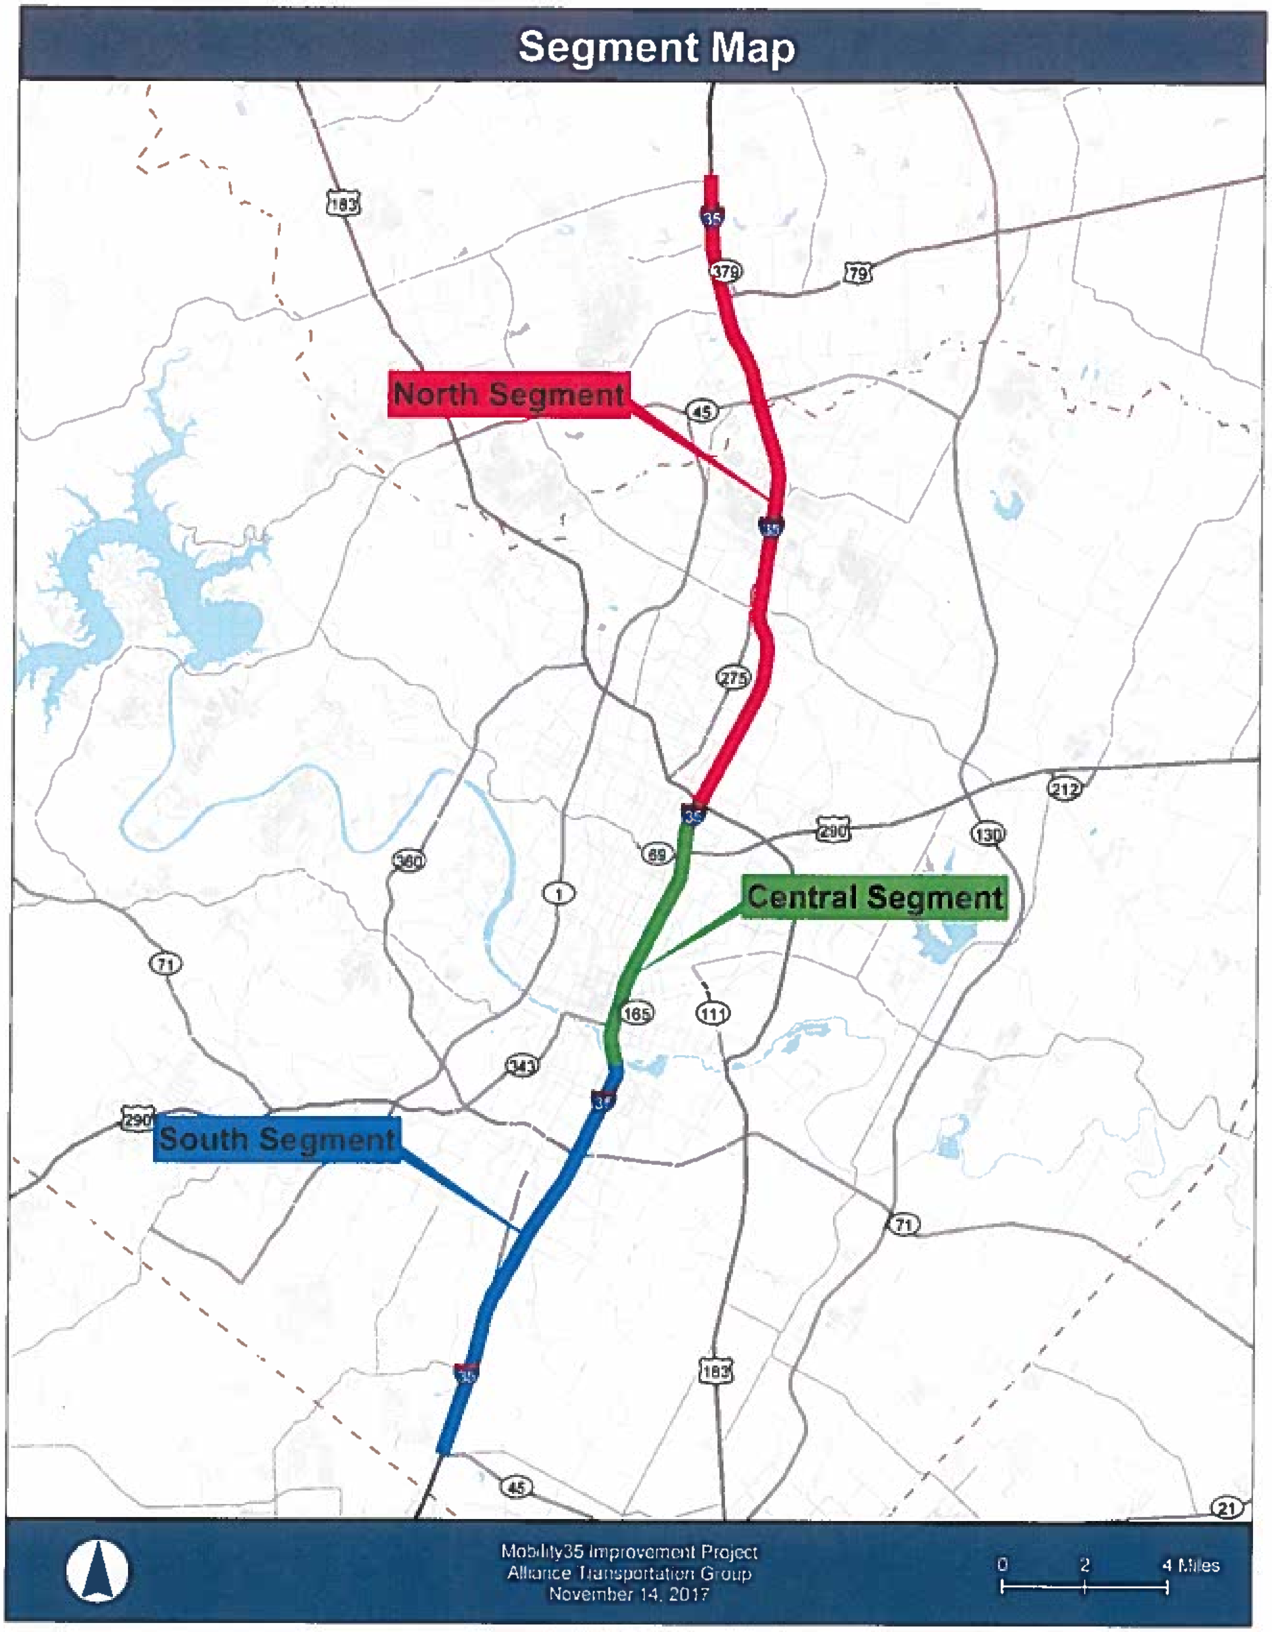

Figure 1: IH 35 Project Limits

Forecasting Future Year Volumes

The following sections detail the available data, describe the review of the TDM, and discuss future steps, which will employ SOP methodologies, and the TDM to forecast future year volumes.

Available Data Sources

Several data sources will be used to determine growth in the project area and develop forecast year traffic volumes.. The following sections describe the data available for use and consideration in forecasting future year volumes.

Traffic Counts

Two different traffic count sources will be used to develop a balanced 2017 volume to be used in representing the base year traffic conditions. This data was provided by TxDOT in the CCP and collected in 2016 and 2017. Count locations include the following types of counts:

- 2015 and 2016 TxDOT Annual Counts (obtained from the STARS II website and the CCP)
- 2016 and 2017 Collected Traffic Movement Counts and Tube Counts

Permanent and Classification Count Locations

The analysis will use the TxDOT Permanent Count Stations on or near the corridor to determine the directional distribution and peak hour factor. Similarly, nearby TxDOT Vehicle Classification Count Stations will determine the heavy vehicle percentages along the corridor. The Traffic Analysis for Highway Design (TAHD) worksheet included with the final traffic forecast will identify these stations.

Historical Counts

A linear regression analysis will use historical count information from the TxDOT STARS II database at locations along the corridor. The resulting historical average growth rate, along with other measures of growth in the area, will inform the selection of growth rates for use in forecasting traffic on the facility.

Traffic Demand Model Review

The 2010 and 2040 CAMPO Travel Demand Model (TDM) scenarios used in this analysis were produced with the latest adopted regional TDM, which includes both roadway and transit networks that reflect the adopted 2040 MTP. Below, the 2010 scenario volumes are compared against 2010 traffic counts to gauge how valid the CAMPO TDM is along the IH 35 corridor. In addition, the 2010 and 2040 scenarios are compared to gauge relative growth along the corridor.

Count to TDM Comparison

Table 1 below depicts this model volume to count comparison sorted by locations along the study corridor, and **Table 2** shows the same comparison by aggregated links. **Table 1** represents counts and volumes summed by cutline for both main-lane and frontage roadways. While **Table 2** aggregates individual links by facility along the corridor.

Table 1: Count to TDM Volume Comparison Cutline

Roadway	Location	2010 Count	2010 TDM Volume	Count to Volume Difference	% Difference
IH 35	SH 45	132,600	154,505	21,905	17%
IH 35	Onion Creek Pkwy	122,385	145,387	23,002	19%
IH 35	William Cannon	148,909	158,544	9,635	6%
IH 35	Stassney	161,900	173,276	11,376	7%
IH 35	SH 71	181,571	175,294	-6,277	-3%
IH 35	Lady Bird lake	176,187	199,561	23,374	13%
IH 35	Airport	230,065	253,497	23,432	10%
IH 35	Braker	165,458	164,888	-570	0%
IH 35	Grand Ave	161,150	150,908	-10,242	-6%
IH 35	US 79	161,071	164,826	3,755	2%

Table 2: Count to TDM Volume Comparison Aggregated Links

IH 35 Facility	County	2010 Count	2010 TDM Volume	Count to Volume Difference	% Difference
Main	Travis	3,056,159	3,092,170	36,011	1%
Frontage	Travis	666,204	782,448	116,244	17%
Ramp	Travis	753,272	774,405	21,133	3%
	Total Travis	***4,475,635***	***4,649,023***	***173,388***	***4%***
Main	Williamson	1,501,235	1,383,392	-117,843	-8%
Frontage	Williamson	294,167	248,730	-45,437	-15%
Ramp	Williamson	317,335	311,377	-5,958	-2%
	Total Williamson	***2,112,737***	***1,943,499***	***-169,238***	***-8%***

The data comparisons above show the CAMPO TDM to be well validated along the IH 35 corridor. Additional TDM and demographic comparisons are described below to help further evaluate the model.

Base Year to Future Year Model Relative Growth

2010 and 2040 TDM Volumes were compared along the corridor to calculate relative growth between the model scenarios. **Table 3** below depicts selected volumes for each TDM year and the corresponding relative growth at the location. Similar to the count and volume comparison above, **Table 3** shows the summation of available main-lane, frontage and express lane volumes (2040 only).

Table 3: Relative Model Growth along IH 35 Study Corridor

Roadway	Location	2010 Count	2040 TDM Volume	Count to Volume Difference	Linear Annual Growth Rate
IH 35	SH 45	132,600	250,328	117,728	3%
IH 35	Onion Creek Pkwy	122,385	226,003	103,618	3%
IH 35	William Cannon	148,909	233,003	84,094	2%
IH 35	Stassney	161,900	277,946	116,046	2%
IH 35	SH 71	181,571	246,550	64,979	1%
IH 35	Lady Bird lake	176,187	313,531	137,344	3%
IH 35	Airport	230,065	333,864	103,799	2%
IH 35	Braker	165,458	240,910	75,452	2%
IH 35	Grand Ave	161,150	229,611	68,461	1%
IH 35	US 79	161,071	275,462	114,391	2%

The CAMPO TDM shows reasonable growth (1%-3%) along IH 35 given the already congested conditions along the corridor.

CAMPO Demographics

2010 demographic data were reviewed in comparison with the CAMPO TDM, Census Estimates, Bureau of Labor Statistics (BLS) data, and Texas Demographic Center (TDC) data, to verify accuracy within the TDM. **Table 4** compares the TDM population and employment levels to the several published sources indicated above. The TDM demographics were found to be reasonably accurate for 2010.

Table 4: Travis and Williamson County 2010 Population and Employment Comparison

Reference	CAMPO TDM		Census Estimate	TDC	BLS
Location	Population	Employment	Population	Population	Employment
Travis	1,001,490	564,517	1,024,266	1,024,000	576,500
Williamson	417,508	126,808	422,679	423,000	122,679
Total	1,418,998	691,325	1,446,945	1,447,000	698,900

Table 5 presents the CAGR (Compound Annual Growth Rate) for population and employment in Travis and Williamson counties from 2010 to 2040. Given recent demographic trends of the two counties, the CAMPO TDM socioeconomic forecast represents reasonable growth for the counties containing the project area.

Table 5: Demographic County Growth

Location	Item	2010 to 2040
Travis County	Population	1.8%
	Employment	2.5%
Williamson County	Population	4.1%
	Employment	6.1%
Total	Population	2.6%
	Employment	3.5%

Model Validation

The CAMPO TDM is realistically capable of capturing local travel patterns along the study corridor as demonstrated by the count to volume tables above **(Tables 1-5)**. Demographics within the counties is reasonable and similar to those found in 3rd party demographic estimates **(Table 4)**. Therefore, based on the aforementioned findings and discussions, it can be inferred that the CAMPO TDM is adequately validated and will serve as a useful tool in forecasting traffic volumes and relative growth in traffic along the project corridor.

Forecast Year Traffic Volume Development

Future year traffic volumes will be developed by using the methodologies outlined in the SOP in conjunction with TDM input and professional judgement. Prior to TDM input, a growth rate based on historical traffic counts will be derived using a year-over-year methodology and long-term growth rate analysis with outlier data omitted. Forecasted 24-hour baseline segment volume projections will be based on these growth rate(s) derived from historical traffic counts and consideration of TDM volumes, as discussed above. The recommended growth rates from this evaluation and the directional and classification factors from available permanent and classification stations will be conveyed in the TAHD worksheet submitted with the developed volumes.

The SOP will be used to determine 24-hour projected turning movement volumes. Turning movements and through movements at all major intersections along the corridor will be forecasted using the three-legged and four-legged methodologies outlined in the SOP. Amendments to these volumes will be evaluated and implemented based on nearby trip attractors and the accuracy of TDM inputs. Due to the express lane component, diversions based on TDM input will be applied to volumes along the corridor. After the amendment and diversion process, the volumes will then be balanced based on SOP methodologies.

The projected traffic volumes for the corridor will be developed based on TPP's SOP for the proposed geometry of the schematic layout.
The analysis will produce 2030 and 2050 forecast volumes, as requested. Vehicle classification and percent trucks will be determined based on collected counts and available TxDOT traffic data.
Additional DHV factors will be applied to the forecasted volumes to develop forecast volumes for the operational analysis.

Straight Line Turning Movements		Detailed Schematic Turning Movements	
Traffic Analysis for Highway Design		Field Trip	
Vehicle Mix		Travel Demand Model Used	
Manual Count Worksheet			

NOTES:

1) See included regressions sheets for determination of growth rates, sections, and selected MC and SP stations for each section.

2) Used year 2014 MC station instead of year 2016, or 2015, since 2015 data was not accepted, and 2016 data was not available. Comparison of year 2014 MC data with preliminary 2017 data from same MC station showed year 2014 data was acceptable with respect to preliminary 2017 data.

MEMO

October 7, 2016

To: Terry McCoy, P.E., District Engineer
Attention: Lorena Eche~~verria~~ De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E,
Traffic Analysis Section Director, TPP

From: Lee Theobald
Transportation Analyst, TPP

Subject: Traffic Data
CSJ: 0015-10-062
I-35 (Mainlanes and Frontage Roads separate)
From FM 1431
To US 183
Travis and Williamson Counties

Attached are diagrams provided by Consultants depicting 2020, 2040 and 2050 average daily traffic volumes and turning movements from ramps to main lanes on I 35 from FM 1431 to US 183 for existing, no-build and build conditions. Also attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Also included are tabulations showing data for use in air and noise analysis.

Due to differences in traffic volumes the project was separated into two sections.
Section 1: From FM 1431 to SH 45
Section 2: From SH 45 to US 183

Please refer to your Memo dated July 8, 2016.

If you have any questions or need additional information, please contact Lee Theobald at (512) 486-5143.

MEMO

July 8, 2016

RECEIVED
JUL 14 2016
BY TPP

To: Bill Knowles, P.E.
Director, Transportation Analysis

From: Carmen Ramos
Austin District

Subject: Traffic Request

County: Travis
CSJ: 0015-10-062, 0015-13-388, 0015-13-077
Highway: IH 35 (Mainlanes and Frontage Roads Separate
Limits: From FM 1431 to US 183, US 183 to Riverside Drive, and Riverside Drive to Hays County Line

---

On February 24, 2016, the Austin District submitted a request for traffic data for the IH 35 from FM 1431 to US 183, US 183 to Riverside Drive, and Riverside Drive to Hays County Line. In late April, Janie Temple requested that the District proceed with developing TPP-type traffic numbers for TPP's review to satisfy the request. The District is now submitting the traffic forecast and is requesting TPP concurrence with the District traffic figures.

Attached is a memo from Keri Johnson (Alliance Transportation Group, Inc.), outlining project details. A second memo, from Mike Chaney (Alliance Transportation Group, Inc.) details the methodology used in completing the analysis. Also attached are the Existing, Build, and No Build line diagrams for the North, Central, and South projects.

Feel free to contact me at (512) 832-7075 if you should have any questions or need additional information.

Page 1 of 1

REQUEST FOR TRAFFIC DATA

Date: 2/19/2016

District: Austin **County:** Travis **CSJ:** 0015-13-388

Highway: Interstate Highway 35 (Mainlanes & Frontage Roads Separate)
Limits: From US 183 to Riverside Drive

Texas Reference Marker System

From Marker: 233 From Displacement: .340 From DFO: 232.851
To Marker: 240 To Displacement: .132 To DFO: 239.643

Is it in the UTP? ☒ Yes ☐ No District Priority: 9 Est. Letting Date: 2020

Existing Number of Lanes: 6
Proposed Number of Lanes: 8

District Contact Person: Carmen Ramos
Phone Number: 512/832-7075

Please attach an 8-1/2" x 11" location map and make note of any existing or proposed development that will be a traffic generator.

The following to be completed (Please mark information to be provided):

☒ 1. Basic Highway Traffic Data for pavement design
(No line diagram analysis required)
- A. Base year/Beginning year: 2020
- B. Forecasted 20 year: 2040
- C. Forecasted 30 year: 2050
- D. Directional Distribution
- E. K-factor
- F. Percent Trucks ADT/DHV
- G. Average Ten Heaviest Wheel Loads (ATHWLD)
- H. Percent Tandem Axles in the ATHWLD
- I. One Directional cumulative 18 KSA at the end of the 20 years/30years
- J. Slab Thickness (8" unless otherwise specified): ______
- K. Structural Number (3 unless otherwise specified): ______

☒ 2. Vehicle classification for environmental studies (Air and Noise Analysis).

☒ 3. Line diagram analysis (straight line turning movements; please provide line diagram).

☐ 4. Complete Corridor Analysis (includes basic highway traffic data for pavement design, environmental studies and detailed schematic turning movements; *please provide detailed schematic*).

Note: If complete corridor analysis is requested, please attach a traffic schematic diagram.

MEMO

October 7, 2016

To: Terry McCoy, P.E., District Engineer
Attention: Lorena Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E,
Traffic Analysis Section Director, TPP

From: Lee Theobald
Transportation Analyst, TPP

Subject: Traffic Data
CSJ: 0015-13-077
I-35 (Mainlanes and Frontage Roads separate)
From Riverside
To Hays County Line (Includes CSJ 0016-01-113)
Travis County

Attached are diagrams provided by Consultants depicting 2020, 2040 and 2050 average daily traffic volumes and turning movements from ramps to main lanes on I 35 from Riverside to Hays County Line for existing, no-build and build conditions. Also attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Also included are tabulations showing data for use in air and noise analysis.

Due to differences in traffic volumes the project was separated into two sections.
Section 1: From Riverside to SH 71
Section 2: From SH 71 to Hays County Line

Please refer to your Memo dated July 8, 2016.

If you have any questions or need additional information, please contact Lee Theobald at (512) 486-5143.

MEMO

October 7, 2016

To: Terry McCoy, P.E., District Engineer
Attention: Lorena Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E,
Traffic Analysis Section Director, TPP

From: Lee Theobald
Transportation Analyst, TPP

Subject: Traffic Data
CSJ: 0015-10-062
I-35 (Mainlanes and Frontage Roads separate)
From FM 1431
To US 183
Travis and Williamson Counties

Attached are diagrams provided by Consultants depicting 2020, 2040 and 2050 average daily traffic volumes and turning movements from ramps to main lanes on I 35 from FM 1431 to US 183 for existing, no-build and build conditions. Also attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Also included are tabulations showing data for use in air and noise analysis.

Due to differences in traffic volumes the project was separated into two sections.
Section 1: From FM 1431 to SH 45
Section 2: From SH 45 to US 183

Please refer to your Memo dated July 8, 2016.

If you have any questions or need additional information, please contact Lee Theobald at (512) 486-5143.

MEMO

March 1, 2018

To: Terry G. McCoy, P.E., District Engineer
Attention: Lorena E. Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E.
Traffic Analysis Section Director, TPP

From: James Burnett
Planner, TPP

Subject: Traffic Data
CSJ: 0015-09-185
I-35 (Mainlanes and Frontage Roads separate):
From RM 2243
To RM 1431
Williamson County

Attached are diagrams depicting 2020, 2040 and 2050 average daily traffic volumes and turning movements on I-35 from RM 2243 to RM 1431 for existing and proposed conditions. Also attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Also included are tabulations showing data for use in air and noise analysis.

Due to significant differences in traffic volumes the project was separated into three sections.

Section 1: From RM 2243 to SE Inner Loop
Section 2: From SE Inner Loop to Westinghouse Rd.
Section 3: From Westinghouse Rd. to RM 1431

Please refer to your original request dated November 21, 2017.

If you have any questions or need additional information, please contact James Burnett at (512) 486-5165.

Texas Department of Transportation

Request for Traffic Data

Form 2124
(Rev. 09/16)
Page 1 of 1

March 1, 2018
Due Date

Date: 11/21/2017

District: Austin **County:** Williamson **CSJ:** 0015-09-185

Highway: IH 35 (mainlane and frontage roads separate)

Limits: RM 2243 to RM 1431

Texas Reference Marker System

From Marker: 260 From Displacement: 0.033 From DFO: 259.544

To Marker: 255 To Displacement: 0.224 To DFO: 254.536

Is it in the UTP: ☒Yes ☐No District Priority: 3 Est. Letting Date: 03/01/2020

Existing Number of Lanes: 6

Proposed Number of Lanes: 6

11-21-17
Corridor Limits changed & provided in share point. Also, line diagrams updated

District Contact Person: Carmen Ramos

Phone Number: 512-832-7075

Please attach an 8-1/2" x 11" location map and make note of any existing or proposed development that will be a traffic generator. NOTE:

The following to be completed (Please mark information to be provided):

☒ 1. Basic Highway Traffic Data for pavement design
(No line diagram analysis required)
- A. Base year/ Beginning year: 2020
- B. Forecasted 20 year: 2040
- C. Forecasted 30 year: 2050
- D. Directional Distribution
- E. K-factor
- F. Percent Trucks ADT/DHV
- G. Average Ten Heaviest Wheel Loads (ATHWLD)
- H. Percent Tandem Axles in the ATHWLD
- I. One Directional cumulative 18 KSA at the end of the 20 years/30 years
- J. Slab Thickness (8" unless otherwise specified):
- K. Structural Number (3 unless otherwise specified):

Counts Requested
11/30/2017

Counts uploa to STA1 12-18

☒ 2. Vehicle classification for environmental studies (Air and Noise Analysis)
☒ 3. Line diagram analysis (straight line turning movements; please provide line diagram).
☒ 4. Complete Corridor Analysis (includes basic highway traffic data for pavement design, environmental studies and detailed schematic turning movements; *please provide detailed schematic*).
☐ 5. Consultant Corridor Information Packet
☐ 6. No build traffic analysis.
- ☐ EA
- ☐ EIS
- ☐ EA/EIS Reevaluation

Note: If complete corridor analysis is requested, please attach a traffic schematic diagram.

Traffic Data Request Form

Request ID *(auto generated on save)*	2017046	
Date Created *(auto generated on save)*	21/11/2017 16 21	2017-11-21T16 21 00
District*	Austin	
County*	☑ Williamson	Terry McCoy@txdot.gov Lorena EcheverriadeMisi
CSJ*	0015-09-185	
Project Highway*	IH 35 (mainlane & frontage road sepa	
Limit (From)*	RM 2243	
Limit (To)*	RM 1431	
Number of Lanes Existing*	6	
Number of Lanes Proposed*	6	
District Contact Person*	Carmen Ramos	
Contact Number*	512-832-7075	
Estimated Letting Date*	3/1/2020	
District Priority*	3	
Attach Drawings or other documents*	0015-09-185 RM 2243 to RM 1431 Location Map pdf 20171120_RM 2243 to RM 1431STICK DIAGRAM pdf Austin District Traffic Request Priority List xls Request for Traffic Data_Form 2124 (Rev 0916) pdf	
Special Instructions *Note If complete corridor analysis is requested, please attach a traffic schematic diagram.*	This request replaces the submittal from the Austin District on July 12, 2017. The limits have been changed on IH 35, from RM 2243 to SE Inner Loop to RM 2243 to RM 1431. Attached are the revised traffic request form, project location map, and line diagram. This request is priority #3 on the Austin District's priority list.	

The following to be completed (Please mark information to be provided)

1. Basic highway traffic data for pavement design	**A. Base Year**	2020
	B. Forecasted 20 Years	☑ **2040**
	C. Forecasted 30 years	☑ **2050**
	D. Directional Distribution	
	E. K-factor	
	F. Percent Trucks ADT/DHV	
	G. Average Ten Heaviest Wheel Loads (ATHWLD)	
	H. Percent Tandem Axles in the ATHWLD	
	I. One Directional cumulative 18 KSA at the end of the 20/30 years	

J. Slab Thickness *(8" unless otherwise specified)* 8

K. Structural Number *(3" unless otherwise specified)* 3

2. Vehicle Classification for environmental studies (Air and Noise Analysis) ☑

3. Line Diagram Analysis (straight line turning movements: please provide line diagram) ☑

4. Complete Corridor analysis (includes basic highway traffic data for pavement design and environmental studies and detailed schematic turning movements; please provide detailed schematic) ☐

5. Consultant Corridor Information Packet ☐

6. No build Traffic Analysis ☐

MEMO

June 23, 2016

To: Terry G. McCoy, P.E., District Engineer
Attention: Lorena Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E.
Traffic Analysis Section Director, TPP

From: Lee Theobald
Transportation Analyst

Subject: Traffic Data
CSJ: 0015-08-140
I 35
At CR 305
Williamson County

Attached is a diagram depicting 2018, 2038 and 2048 average daily traffic volumes and turning movements on I 35 at CR 305 for existing and proposed conditions. Also attached are tabulations showing traffic analysis for highway design for the 2018 to 2038 twenty year period and 2018 to 2038 thirty year period for the described limits of the route along with CR 305. Also included are tabulations showing data for use in air and noise analysis.

Please refer to your original request dated April 18, 2016.

If you have any questions or need additional information, please contact Lee Theobald at (512) 486-5143.

MEMO

June 8, 2016

To: Terry G. McCoy, P.E., District Engineer
Lorena E. Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E.
Traffic Analysis Section Director, TPP

From: Gabriel Contreras
Transportation Analyst, TPP

Subject: Traffic Data
CSJ: 0015-08-142
I-35: (Mainlanes and Frontage Roads, separate)
From FM 972
To Bud Stockton Loop
Williamson County

Attached are copies of schematics depicting 2020, 2040 and 2050 anticipated average daily traffic volumes and turning movements along I-35 for both existing and proposed conditions. Also attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Included are tabulations showing data for use in air and noise analysis.

Due to significant differences in traffic volumes for the frontage roads only the project was separated into two sections.

Section 1: From FM 972 to on and off ramps west of Ronald Reagan Blvd
Section 2: From on and off ramps west of Ronald Reagan Blvd to Bud Stockton Loop

Please refer to your original memorandum dated January 11, 2016.

If you have any questions or need additional information, please contact Gabriel Contreras at (512) 486-5180.

MEMO

January 11, 2016

To: Bill Knowles, P.E.
Director, Transportation Analysis

From: CR Carmen Ramos
Austin District

Subject: Traffic Request

County: Williamson
CSJ: 0015-08-142
Highway: IH 35 (Mainlanes and Frontage Roads Separate)
Limits: FM 972 to Bud Stockton Loop

Attached please find our request for traffic data for IH 35 (Mainlanes and Frontage Roads Separate) from FM 972 to Bud Stockton Loop. This transmittal includes the following documents:

1. Completed TRAFFIC REQUEST FORM
2. Project Location Map
3. Line Diagram
4. District Priority List

Please feel free to contact Carmen Ramos at (512) 832-7075 if you have any questions.

CC: Janie Temple, TPP

Marisabel Ramthum, P.E., Austin District

Texas Department of Transportation

Form 2124
(6/2004)
Page 1 of 1

REQUEST FOR TRAFFIC DATA

Date: 1/11/2016

District: Austin **County:** Williamson **CSJ:** 0015-08-142

Highway: Interstate Highway 35 (Mainlanes & Frontage Roads Separate)
Limits: FM 972 to Bud Stockton Loop

Texas Reference Marker System
From Marker: 268 From Displacement: 0.16 miles From DFO: 00.160
To Marker: 274 To Displacement: 0.13 miles To DFO: 06.130

Is it in the UTP? ☐ Yes ☒ No District Priority: 9 Est. Letting Date: 2016

Existing Number of Lanes: 6
Proposed Number of Lanes: 6

District Contact Person: Carmen Ramos
Phone Number: 512/832-7075

Please attach an 8-1/2" x 11" location map and make note of any existing or proposed development that will be a traffic generator.

The following to be completed (Please mark information to be provided):

☒ 1. Basic Highway Traffic Data for pavement design
(No line diagram analysis required)
- A. Base year/Beginning year: 2020
- B. Forecasted 20 year: 2040
- C. Forecasted 30 year: 2050
- D. Directional Distribution
- E. K-factor
- F. Percent Trucks ADT/DHV
- G. Average Ten Heaviest Wheel Loads (ATHWLD)
- H. Percent Tandem Axles in the ATHWLD
- I. One Directional cumulative 18 KSA at the end of the 20 years/30years
- J. Slab Thickness (8" unless otherwise specified): ______
- K. Structural Number (3 unless otherwise specified): ______

RECEIVED
JAN 11 2016
BY TPP

☒ 2. Vehicle classification for environmental studies (Air and Noise Analysis).

☒ 3. Line diagram analysis (straight line turning movements; please provide line diagram).

☐ 4. Complete Corridor Analysis (includes basic highway traffic data for pavement design, environmental studies and detailed schematic turning movements; *please provide detailed schematic*).

Note: If complete corridor analysis is requested, please attach a traffic schematic diagram.

MEMO

May 23, 2016

To: Greg Malatek, P.E., District Engineer
Lorena Echeverria De Misi, P.E., Director of TPD

Through: William E. Knowles, P.E.
Traffic Analysis Section Director, TPP

From: Robert C. Williams
Transportation Analyst, TPP

Subject: Traffic Data
CSJ: 0015-08-144
I-35 Proposed: (Mainlanes and Frontage Roads, separate)
From SH 29
To NE Inner Loop
Williamson County

Attached are copies of schematics depicting 2020, 2040 and 2050 anticipated average daily traffic volumes and turning movements along I-35. Also attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Included are tabulations showing data for use in air and noise analysis.

Due to differences in traffic volumes this project was separated into two sections for both main lanes and frontage roads.

Section 1: From SH 29 to Williams Drive
Section 2: From Williams Drive to Northeast Inner Loop

Please refer to your original memorandum dated September 29, 2015.

If you have any questions or need additional information, please contact Robert C. Williams at (512) 486-5145.

From SH 29
To NE Inner Loop
Williamson County

Attached are tabulations showing traffic analysis for highway design for the 2020 to 2040 twenty year period and 2020 to 2050 thirty year period for the described limits of the route. Included is a tabulation showing data for use in air and noise analysis.

This data supersedes the information from the project provided to your office on December 22, 2015.

Please refer to your original memorandum dated September 29, 2015.

If you have any questions or need additional information, please contact Robert C. Williams at (512) 486-5145.

From: Spillar, Rob <Rob.Spillar@austintexas.gov>
Sent: Friday, February 25, 2022 1:37 PM
To: Tucker Ferguson; Heather Ashley-Nguyen
Cc: Bollich, Eric; Kitten, Cole
Subject: Downtown Arterials 7th and 8th Street

Tucker, Heather:

I needed to share a SHORT EMAIL with you to make sure I meet the deadline communicated to me regarding commitment on changing direction on these streets.

Your request was for us to commit by today to modifying the current directional management of 7th and 8th Street. What I need to communicate is that to achieve the modification of directional operation is a process. Making these changes is within the authority of the City Traffic Engineer here at the City of Austin. As Director, I currently serve in this capacity, but I have learned that making these type changes requires public engagement and political concurrence. The good news is we have a process and we are just starting it:

We are kicking off our ACT plan which will update the grid management concept for our entire downtown. It is an update to the Downtown Austin Plan (DAP) that serves as our current adopted policy for downtown street operations.

What I suggest is that you move forward with analysis of the current build alternatives. If to make one of those alternatives work (as I understand is the case) then make that a finding of the environmental review. The analysis and conclusions you come to will inform the ACT plan and inform the decision here at the City. We will jointly need to identify the perceived impacts. We are kicking off the ACT plan so it is likely that we can coordinate during your analysis and the development of the ACT plan. The loading zones for downtown hotels that are hard built to facilitate the existing directional operation has always been the biggest concern but not an impossible issue.

Intuitively, making the changes that you have requested represents good engineering judgement from my point of view and I am confident that the City can/will support, especially if the reasoning is for improved safety and improved accessibility to central Austin. We have discussed both 7th and 8th street changes before here at the City, but punted decision making till we had more definite information from the I-35 project.

I hope this gives you the confidence to move forward with the analysis of the alternatives with the identified street operations changes incorporated in your defined alternatives. Sorry we could not speak directly.

Robert Spillar
Director, Austin Transportation Department
City Traffic Engineer

Traffic and Safety Analysis Memos

MEMO

August 4, 2022

To: Tommy Abrego, P.E.
Mobility35 Program Manager, TxDOT Austin District

From: Matthew G. Best, P.E., PTOE
Traffic Project Manager, HDR

Subject: Mobility35 Capital Express Central: Build Alternative Options

---

Background

As part of the Interstate 35 Capital Express Central project in Austin, Texas, Build Alternatives are being evaluated as part of a project Environmental Impact Statement. Through stakeholder engagement, the project environmental team identified a list of evaluation criteria, which compare the No Build and Build Alternatives—Alternative 2 and Modified Alternative 3—on areas ranging from traffic operations to right-of-way impacts.

As part of the Purpose and Need section of the evaluation criteria matrix, there are three subsections, one of which is “enhancing safety within the corridor.” Within that subsection, there are two quantitative criteria—“reduction in total crashes” and “reduction in fatalities and injury crashes.” This memorandum summarizes the analysis required and results of those two safety criteria.

Methodology

A predictive crash analysis was conducted for the No Build and Build Alternatives using *Interactive Highway Safety Design Model* (*IHSDM*) software to assess the potential safety benefits of recommended freeway capacity, frontage road, ramp, and intersection improvements compared to the current No Build Alternative. The *IHSDM* output results are attached to this memorandum. The analysis is “comparative” because it is based on the national Safety Performance Functions (SPF) published in the Highway Safety Manual (HSM). There are currently no approved and published calibration factors for predicting interstate and ramp crashes in Texas; therefore, the analysis results do not represent the actual expected number of crashes but rather provide an indication of whether crashes and crash rates will increase or decrease.

The predictive crash analysis was conducted within the limits of the Capital Express Central project, from US 290 East to US 290 West/State Highway 71. The current and proposed Alternative geometry and projected Year 2030 average daily traffic volume data within the project limits were entered into *IHSDM* for the freeway segments, ramps, frontage roads, and cross streets. The No Build geometry and proposed Build Alternative modifications are reflected in the *IHSDM* Build Alternative models to the fullest extent of the software's capabilities. For instance

- *IHSDM* cannot explicitly model upper and lower mainlane decks, such as exists currently between Airport Boulevard and Martin Luther King Jr. Boulevard, and the resulting merge and diverge points. As a result, the upper deck was modeled as each a collector-distributor and a freeway, with the results averaged to determine No Build results.
- *IHSDM* cannot explicitly model buffer-separated managed lanes. Separate models were constructed—one with only general purpose (GP) lanes, one with both GP and managed lanes (MLs) as a single facility—with each using combined GP and ML 2030 average daily traffic forecasts. To estimate the predicted crashes on the buffer-separated freeway portion of the study area, the outputs of the two separate models were averaged.

The projected Year 2030 daily traffic volumes are those approved by TxDOT in "Mobility35 Capital Express Central: Traffic Projections Methodology Memorandum," dated March 7, 2022.

Results

Table 1 provides a comparison of total crashes (all severities and types) in 2030 among the No Build and Build Alternatives within the study area. Crashes are separated by road type, which include GP and MLs (buffer- and barrier-separated). As shown, the Build Alternatives are projected to reduce crashes each by approximately 24 percent compared to the No Build Alternative.

Table 1: Predicted Crashes in 2030

Alternative	Road Type					Crashes	
	GP and Buffer-Separated ML	Barrier-Separated ML	Freeway Ramp	ML Ramp	Frontage Road Intersections	Total	% Change
No Build	759.8	n/a	44.1	n/a	242.2	1046.1	n/a
2	436.2	34.1	65.3	4.3	259.7	799.7	-24%
Modified 3	472.5	43.4	55.3	3.6	224.6	799.4	-24%

Note: Calibration factors were unavailable for the analysis. The analysis provides an indication of relative benefits/drawbacks of each Alternative.

Table 2 provides a comparison of the sum of fatal and injury crashes (no property damage only crashes) in 2030 among the No Build and Build Alternatives within the study area. As shown, Modified Build Alternative 3 is projected to reduce crashes by 29 percent compared to the No Build Alternative, while Build Alternative 2 is projected to reduce crashes further—by 34 percent compared to No Build. While the safety benefits of both build alternatives are evident, Build Alternative 2 does provide for a slightly greater decrease in predicted fatal and injury crashes, due in part to:

- Fewer conflict points, especially crossing conflicts that tend to lead to more severe crashes, at frontage road diamond intersections compared to boulevard standard four-way intersections
- Lower frontage road traffic volumes—and thus potential conflicts—at spot locations (e.g., Woodland Avenue)
- No ingress/egress allowed between managed and GP lanes (one location in each direction—near Riverside Drive—is provided under Modified Build Alternative 3)
- Less barrier separation between the managed and GP lanes

Table 2: Predicted Fatal & Injury Crashes in 2030

Alternative	Road Type					Crashes	
	GP and Buffer-Separated ML	Barrier-Separated ML	Freeway Ramp	ML Ramp	Frontage Road Intersections	Total	% Change
No Build	267.0		20.1		51.7	338.9	-
2	125.0	12.8	31.9	2.0	50.7	222.3	-34%
Modified 3	134.6	15.9	26.3	1.7	61.4	239.9	-29%

Note: Calibration factors were unavailable for the analysis. The analysis provides an indication of relative benefits/drawbacks of each Alternative.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment CENTRALEX
Highway Comment: Imported from CENTRALEX.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:01:24 CDT 2021

Minimum Location: 3058+00.000
Maximum Location: 3477+00.000
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 3058+00.000
Evaluation End Location: 3477+00.000
Functional Class: Freeway

Type of Alignment: Divided, Multilane

Model Category: Freeway Segment

Calibration Factor: FI_EN=1.0; FI_EX=1.0; FI_MV=1.0; FI_SV=1.0; PDO_EN=1.0; PDO_EX=1.0; PDO_MV=1.0; PDO_SV=1.0;

Table 3. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Effective Length (mi)	**7.7266**
Average Future Road AADT (vpd)	**175,065**
Predicted Crashes	
Total Crashes	**563.47**
Fatal and Injury Crashes	**145.90**
Property-Damage-Only Crashes	**417.57**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**26**
Percent Property-Damage-Only Crashes (%)	**74**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**72.9257**
FI Crash Rate (crashes/mi/yr)	**18.8832**
PDO Crash Rate (crashes/mi/yr)	**54.0425**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**493.72**
Travel Crash Rate (crashes/million veh-mi)	**1.14**
Travel FI Crash Rate (crashes/million veh-mi)	**0.30**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.85**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.

Table 4. Predicted Freeway Speed Change Lane Crash Rates and Frequencies Summary (Speed Change)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Length (mi)	**0.4081**
Average Future Road AADT (vpd)	**93,643**
Predicted Crashes	
Total Crashes	**10.71**
Fatal and Injury Crashes	**3.47**
Property-Damage-Only Crashes	**7.25**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**32**
Percent Property-Damage-Only Crashes (%)	**68**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**26.2514**
FI Crash Rate (crashes/mi/yr)	**8.5007**
PDO Crash Rate (crashes/mi/yr)	**17.7507**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**13.95**
Travel Crash Rate (crashes/million veh-mi)	**0.77**
Travel FI Crash Rate (crashes/million veh-mi)	**0.25**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.52**

Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 5. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Highway Segment	Total Highway Segment Crashes	1.37	34.1	2.65	65.9	4.02	100.0
	Total Crashes	1.37	34.1	2.65	65.9	4.02	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 14. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
3058+00.000	3065+13.000	for segment #1 (3058+00.000 to 3065+13.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3058+00.000	3065+13.000	for segment #1 (3058+00.000 to 3065+13.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3058+00.000	3065+13.000	for segment #1 (3058+00.000 to 3065+13.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3058+00.000	3065+13.000	for segment #1 (3058+00.000 to 3065+13.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+13.000	3065+38.000	for segment #2 (3065+13.000 to 3065+38.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+13.000	3065+38.000	for segment #2 (3065+13.000 to 3065+38.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+13.000	3065+38.000	for segment #2 (3065+13.000 to 3065+38.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+13.000	3065+38.000	for segment #2 (3065+13.000 to 3065+38.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+38.000	3067+33.000	for segment #3 (3065+38.000 to 3067+33.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+38.000	3067+33.000	for segment #3 (3065+38.000 to 3067+33.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+38.000	3067+33.000	for segment #3 (3065+38.000 to 3067+33.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3065+38.000	3067+33.000	for segment #3 (3065+38.000 to 3067+33.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3067+33.000	3068+88.000	for segment #4 (3067+33.000 to 3068+88.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3067+33.000	3068+88.000	for segment #4 (3067+33.000 to 3068+88.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3067+33.000	3068+88.000	for segment #4 (3067+33.000 to 3068+88.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3067+33.000	3068+88.000	for segment #4 (3067+33.000 to 3068+88.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3068+88.000	3077+84.000	for segment #5 (3068+88.000 to 3077+84.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3068+88.000	3077+84.000	for segment #5 (3068+88.000 to 3077+84.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3068+88.000	3077+84.000	for segment #5 (3068+88.000 to 3077+84.000), Outside barrier distance from edge of outside shoulder to barrier face (0.10 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3077+84.000	3079+00.000	for segment #6 (3077+84.000 to 3079+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3077+84.000	3079+00.000	for segment #6 (3077+84.000 to 3079+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3077+84.000	3079+00.000	for segment #6 (3077+84.000 to 3079+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
3079+00.000	3081+51.000	for segment #7 (3079+00.000 to 3081+51.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3079+00.000	3081+51.000	for segment #7 (3079+00.000 to 3081+51.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3081+51.000	3082+31.000	for segment #8 (3081+51.000 to 3082+31.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3081+51.000	3082+31.000	for segment #8 (3081+51.000 to 3082+31.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3082+31.000	3084+00.000	for segment #9 (3082+31.000 to 3084+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3082+31.000	3084+00.000	for segment #9 (3082+31.000 to 3084+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3084+00.000	3084+73.000	for segment #10 (3084+00.000 to 3084+73.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3084+00.000	3084+73.000	for segment #10 (3084+00.000 to 3084+73.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3084+73.000	3085+07.000	for segment #11 (3084+73.000 to 3085+07.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3084+73.000	3085+07.000	for segment #11 (3084+73.000 to 3085+07.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3085+07.000	3085+84.000	for segment #12 (3085+07.000 to 3085+84.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3085+07.000	3085+84.000	for segment #12 (3085+07.000 to 3085+84.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3085+84.000	3086+81.000	for segment #13 (3085+84.000 to 3086+81.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3085+84.000	3086+81.000	for segment #13 (3085+84.000 to 3086+81.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3085+84.000	3086+81.000	for segment #13 (3085+84.000 to 3086+81.000), Outside barrier offset (3.95 feet) is less than the right outside shoulder width (4.35 feet). This indicates there is problem with the input data.
3086+81.000	3087+80.000	for segment #14 (3086+81.000 to 3087+80.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3086+81.000	3087+80.000	for segment #14 (3086+81.000 to 3087+80.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3086+81.000	3087+80.000	for segment #14 (3086+81.000 to 3087+80.000), Outside barrier offset (4.84 feet) is less than the right outside shoulder width (5.07 feet). This indicates there is problem with the input data.
3087+80.000	3088+10.000	for segment #15 (3087+80.000 to 3088+10.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3087+80.000	3088+10.000	for segment #15 (3087+80.000 to 3088+10.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3087+80.000	3088+10.000	for segment #15 (3087+80.000 to 3088+10.000), Outside barrier offset (5.43 feet) is less than the right outside shoulder width (5.54 feet). This indicates there is problem with the input data.
3087+80.000	3088+10.000	for segment #15 (3087+80.000 to 3088+10.000), Outside barrier offset (9.40 feet) is less than the left outside shoulder width (9.80 feet). This indicates there is problem with the input data.
3088+10.000	3088+58.000	for segment #16 (3088+10.000 to 3088+58.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

3088+10.000	3088+58.000	for segment #16 (3088+10.000 to 3088+58.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3088+10.000	3088+58.000	for segment #16 (3088+10.000 to 3088+58.000), Outside barrier offset (5.78 feet) is less than the right outside shoulder width (5.82 feet). This indicates there is problem with the input data.
3088+10.000	3088+58.000	for segment #16 (3088+10.000 to 3088+58.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3088+58.000	3098+27.000	for segment #17 (3088+58.000 to 3098+27.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3088+58.000	3098+27.000	for segment #17 (3088+58.000 to 3098+27.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3088+58.000	3098+27.000	for segment #17 (3088+58.000 to 3098+27.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3088+58.000	3098+27.000	for segment #17 (3088+58.000 to 3098+27.000), Outside barrier offset (6.00 feet) is less than the right outside shoulder width (10.00 feet). This indicates there is problem with the input data.
3098+27.000	3100+36.000	for segment #18 (3098+27.000 to 3100+36.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3098+27.000	3100+36.000	for segment #18 (3098+27.000 to 3100+36.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3100+36.000	3112+00.000	for segment #19 (3100+36.000 to 3112+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3100+36.000	3112+00.000	for segment #19 (3100+36.000 to 3112+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3100+36.000	3112+00.000	for segment #19 (3100+36.000 to 3112+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3100+36.000	3112+00.000	for segment #19 (3100+36.000 to 3112+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3112+00.000	3113+01.000	for segment #20 (3112+00.000 to 3113+01.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3112+00.000	3113+01.000	for segment #20 (3112+00.000 to 3113+01.000), Median barrier offset (7.50 feet) is less than the left side inside shoulder width (7.50 feet). This indicates there is problem with the input data.
3112+00.000	3113+01.000	for segment #20 (3112+00.000 to 3113+01.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3113+01.000	3115+01.000	for segment #21 (3113+01.000 to 3115+01.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3113+01.000	3115+01.000	for segment #21 (3113+01.000 to 3115+01.000), Median barrier offset (5.99 feet) is less than the left side inside shoulder width (5.99 feet). This indicates there is problem with the input data.
3113+01.000	3115+01.000	for segment #21 (3113+01.000 to 3115+01.000), Median barrier distance from edge of inside shoulder to barrier face (0.40 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3113+01.000	3115+01.000	for segment #21 (3113+01.000 to 3115+01.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3115+01.000	3116+09.000	for segment #22 (3115+01.000 to 3116+09.000), Median barrier offset (4.45 feet) is less than the left side inside shoulder width (4.45 feet). This indicates there is problem with the input data.
3115+01.000	3116+09.000	for segment #22 (3115+01.000 to 3116+09.000), Median barrier offset (3.78 feet) is less than the right side inside shoulder width (3.78 feet). This indicates there is problem with the input data.
3115+01.000	3116+09.000	for segment #22 (3115+01.000 to 3116+09.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

3116+09.000	3116+43.000	for segment #23 (3116+09.000 to 3116+43.000), Median barrier offset (3.74 feet) is less than the left side inside shoulder width (3.74 feet). This indicates there is problem with the input data.
3116+09.000	3116+43.000	for segment #23 (3116+09.000 to 3116+43.000), Median barrier offset (3.50 feet) is less than the right side inside shoulder width (3.50 feet). This indicates there is problem with the input data.
3116+09.000	3116+43.000	for segment #23 (3116+09.000 to 3116+43.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3116+43.000	3117+86.000	for segment #24 (3116+43.000 to 3117+86.000), Median barrier offset (2.86 feet) is less than the left side inside shoulder width (2.86 feet). This indicates there is problem with the input data.
3116+43.000	3117+86.000	for segment #24 (3116+43.000 to 3117+86.000), Median barrier offset (3.14 feet) is less than the right side inside shoulder width (3.14 feet). This indicates there is problem with the input data.
3116+43.000	3117+86.000	for segment #24 (3116+43.000 to 3117+86.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3117+86.000	3118+00.000	for segment #25 (3117+86.000 to 3118+00.000), Median barrier offset (2.07 feet) is less than the left side inside shoulder width (2.07 feet). This indicates there is problem with the input data.
3117+86.000	3118+00.000	for segment #25 (3117+86.000 to 3118+00.000), Median barrier offset (2.83 feet) is less than the right side inside shoulder width (2.83 feet). This indicates there is problem with the input data.
3117+86.000	3118+00.000	for segment #25 (3117+86.000 to 3118+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3118+00.000	3120+00.000	for segment #26 (3118+00.000 to 3120+00.000), Median barrier offset (2.40 feet) is less than the right side inside shoulder width (2.40 feet). This indicates there is problem with the input data.
3118+00.000	3120+00.000	for segment #26 (3118+00.000 to 3120+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3118+00.000	3120+00.000	for segment #26 (3118+00.000 to 3120+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3120+00.000	3120+27.000	for segment #27 (3120+00.000 to 3120+27.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3120+00.000	3120+27.000	for segment #27 (3120+00.000 to 3120+27.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

3131+47.000	3132+20.000	for segment #49 (3131+47.000 to 3132+20.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3131+47.000	3132+20.000	for segment #49 (3131+47.000 to 3132+20.000), Outside barrier distance from edge of outside shoulder to barrier face (0.37 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3132+20.000	3132+54.000	for segment #52 (3132+20.000 to 3132+54.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3132+20.000	3132+54.000	for segment #52 (3132+20.000 to 3132+54.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3132+20.000	3132+54.000	for segment #52 (3132+20.000 to 3132+54.000), Outside barrier offset (3.58 feet) is less than the right outside shoulder width (3.58 feet). This indicates there is problem with the input data.
3132+20.000	3132+54.000	for segment #52 (3132+20.000 to 3132+54.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3132+54.000	3132+82.000	for segment #54 (3132+54.000 to 3132+82.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3132+54.000	3132+82.000	for segment #54 (3132+54.000 to 3132+82.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3132+54.000	3132+82.000	for segment #54 (3132+54.000 to 3132+82.000), Outside barrier offset (2.49 feet) is less than the right outside shoulder width (2.49 feet). This indicates there is problem with the input data.

3327+28.000	3328+81.000	for segment #167 (3327+28.000 to 3328+81.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3327+28.000	3328+81.000	for segment #167 (3327+28.000 to 3328+81.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3328+81.000	3328+89.000	for segment #168 (3328+81.000 to 3328+89.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3328+81.000	3328+89.000	for segment #168 (3328+81.000 to 3328+89.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3328+89.000	3329+17.000	for segment #169 (3328+89.000 to 3329+17.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3328+89.000	3329+17.000	for segment #169 (3328+89.000 to 3329+17.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3329+17.000	3332+62.000	for segment #170 (3329+17.000 to 3332+62.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3329+17.000	3332+62.000	for segment #170 (3329+17.000 to 3332+62.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3329+17.000	3332+62.000	for segment #170 (3329+17.000 to 3332+62.000), Outside barrier offset (7.04 feet) is less than the right outside shoulder width (7.50 feet). This indicates there is problem with the input data.
3332+62.000	3342+00.000	for segment #171 (3332+62.000 to 3342+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3332+62.000	3342+00.000	for segment #171 (3332+62.000 to 3342+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3332+62.000	3342+00.000	for segment #171 (3332+62.000 to 3342+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3332+62.000	3342+00.000	for segment #171 (3332+62.000 to 3342+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3342+00.000	3344+51.000	for segment #172 (3342+00.000 to 3344+51.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3342+00.000	3344+51.000	for segment #172 (3342+00.000 to 3344+51.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3342+00.000	3344+51.000	for segment #172 (3342+00.000 to 3344+51.000), Outside barrier distance from edge of outside shoulder to barrier face (0.11 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3342+00.000	3344+51.000	for segment #172 (3342+00.000 to 3344+51.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3344+51.000	3345+00.000	for segment #173 (3344+51.000 to 3345+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3344+51.000	3345+00.000	for segment #173 (3344+51.000 to 3345+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3344+51.000	3345+00.000	for segment #173 (3344+51.000 to 3345+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3344+51.000	3345+00.000	for segment #173 (3344+51.000 to 3345+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.13 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3345+00.000	3346+24.000	for segment #174 (3345+00.000 to 3346+24.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3345+00.000	3346+24.000	for segment #174 (3345+00.000 to 3346+24.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

3448+72.150	3449+25.000	for segment #227 (3448+72.150 to 3449+25.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3448+72.150	3449+25.000	for segment #227 (3448+72.150 to 3449+25.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3449+25.000	3450+00.000	for segment #229 (3449+25.000 to 3450+00.000), Inside shoulder width (13.86 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
3449+25.000	3450+00.000	for segment #229 (3449+25.000 to 3450+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3449+25.000	3450+00.000	for segment #229 (3449+25.000 to 3450+00.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3449+25.000	3450+00.000	for segment #229 (3449+25.000 to 3450+00.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+00.000	3450+19.000	for segment #231 (3450+00.000 to 3450+19.000), Inside shoulder width (14.36 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
3450+00.000	3450+19.000	for segment #231 (3450+00.000 to 3450+19.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+00.000	3450+19.000	for segment #231 (3450+00.000 to 3450+19.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+00.000	3450+19.000	for segment #231 (3450+00.000 to 3450+19.000), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+19.000	3450+68.980	for segment #233 (3450+19.000 to 3450+68.980), Inside shoulder width (14.91 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
3450+19.000	3450+68.980	for segment #233 (3450+19.000 to 3450+68.980), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+19.000	3450+68.980	for segment #233 (3450+19.000 to 3450+68.980), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+19.000	3450+68.980	for segment #233 (3450+19.000 to 3450+68.980), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+68.980	3450+81.000	for segment #235 (3450+68.980 to 3450+81.000), Inside shoulder width (15.40 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
3450+68.980	3450+81.000	for segment #235 (3450+68.980 to 3450+81.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+68.980	3450+81.000	for segment #235 (3450+68.980 to 3450+81.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+81.000	3451+44.000	for segment #236 (3450+81.000 to 3451+44.000), Inside shoulder width (16.00 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
3450+81.000	3451+44.000	for segment #236 (3450+81.000 to 3451+44.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+81.000	3451+44.000	for segment #236 (3450+81.000 to 3451+44.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3451+44.000	3452+07.000	for segment #237 (3451+44.000 to 3452+07.000), Inside shoulder width (17.01 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
3451+44.000	3452+07.000	for segment #237 (3451+44.000 to 3452+07.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3451+44.000	3452+07.000	for segment #237 (3451+44.000 to 3452+07.000), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

3132+82.000	3133+55.000	for segment #57 (3132+82.000 to 3133+55.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3133+55.000	3134+21.000	for segment #59 (3133+55.000 to 3134+21.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3134+21.000	3134+87.000	for segment #61 (3134+21.000 to 3134+87.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3134+87.000	3135+53.000	for segment #63 (3134+87.000 to 3135+53.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3135+53.000	3136+20.620	for segment #65 (3135+53.000 to 3136+20.620), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3206+78.640	3209+38.640	for segment #81 (3206+78.640 to 3209+38.640), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3215+47.990	3217+52.990	for segment #82 (3215+47.990 to 3217+52.990), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3347+03.140	3347+04.000	for segment #176 (3347+03.140 to 3347+04.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3347+04.000	3347+47.000	for segment #178 (3347+04.000 to 3347+47.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3347+47.000	3348+08.000	for segment #180 (3347+47.000 to 3348+08.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3348+08.000	3348+58.140	for segment #182 (3348+08.000 to 3348+58.140), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3354+67.260	3354+87.000	for segment #188 (3354+67.260 to 3354+87.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3354+87.000	3355+27.000	for segment #190 (3354+87.000 to 3355+27.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
3355+27.000	3355+68.000	for segment #192 (3355+27.000 to 3355+68.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3355+68.000	3355+87.260	for segment #194 (3355+68.000 to 3355+87.260), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3433+36.550	3436+61.550	for segment #221 (3433+36.550 to 3436+61.550), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3447+63.980	3448+17.000	for segment #224 (3447+63.980 to 3448+17.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3448+17.000	3448+72.150	for segment #226 (3448+17.000 to 3448+72.150), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3448+72.150	3449+25.000	for segment #228 (3448+72.150 to 3449+25.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3449+25.000	3450+00.000	for segment #230 (3449+25.000 to 3450+00.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+00.000	3450+19.000	for segment #232 (3450+00.000 to 3450+19.000), For Speed Change Lane the median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3450+19.000	3450+68.980	for segment #234 (3450+19.000 to 3450+68.980), For Speed Change Lane Median barrier offset (17.23 feet) is less than the right side inside shoulder width (17.23 feet). This indicates there is problem with the input data.
3082+31.000	3084+00.000	for segment #9 (3082+31.000 to 3084+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3084+00.000	3084+73.000	for segment #10 (3084+00.000 to 3084+73.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3087+80.000	3088+10.000	for segment #15 (3087+80.000 to 3088+10.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3088+10.000	3088+58.000	for segment #16 (3088+10.000 to 3088+58.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3088+58.000	3098+27.000	for segment #17 (3088+58.000 to 3098+27.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3100+36.000	3112+00.000	for segment #19 (3100+36.000 to 3112+00.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3112+00.000	3113+01.000	for segment #20 (3112+00.000 to 3113+01.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3113+01.000	3115+01.000	for segment #21 (3113+01.000 to 3115+01.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3115+01.000	3116+09.000	for segment #22 (3115+01.000 to 3116+09.000), Freeway Segment of type Nine-lane Freeway is using unbalanced lane processing with types Eight-lane Freeway and Ten-lane Freeway
3137+16.960	3137+43.660	for segment #66 (3137+16.960 to 3137+43.660), traffic volume (177,350 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4F
3137+16.960	3137+43.660	for segment #66 (3137+16.960 to 3137+43.660), Freeway Segment of type Six-lane Freeway is using unbalanced lane processing with types Four-lane Freeway and Eight-lane Freeway
3137+43.660	3144+71.000	for segment #67 (3137+43.660 to 3144+71.000), traffic volume (125,800 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4F
3144+71.000	3148+95.000	for segment #68 (3144+71.000 to 3148+95.000), traffic volume (125,800 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4F
3144+71.000	3148+95.000	for segment #68 (3144+71.000 to 3148+95.000), Freeway Segment of type Five-lane Freeway is using unbalanced lane processing with types Four-lane Freeway and Six-lane Freeway
3148+95.000	3155+00.820	for segment #69 (3148+95.000 to 3155+00.820), traffic volume (125,800 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4F
3155+00.820	3160+76.980	for segment #70 (3155+00.820 to 3160+76.980), traffic volume (122,800 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4F
3160+76.980	3162+67.000	for segment #71 (3160+76.980 to 3162+67.000), traffic volume (126,900 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4F

3450+19.000	3450+68.980	for segment #233 (3450+19.000 to 3450+68.980), Freeway Segment of type Seven-lane Freeway is using unbalanced lane processing with types Six-lane Freeway and Eight-lane Freeway
3467+74.000	3477+00.000	for segment #249 (3467+74.000 to 3477+00.000), Freeway Segment of type Seven-lane Freeway is using unbalanced lane processing with types Six-lane Freeway and Eight-lane Freeway
3206+78.640	3209+38.640	for segment #81 (3206+78.640 to 3209+38.640), traffic volume (124,450 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3215+47.990	3217+52.990	for segment #82 (3215+47.990 to 3217+52.990), traffic volume (124,450 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3347+03.140	3347+04.000	for segment #176 (3347+03.140 to 3347+04.000), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3347+04.000	3347+47.000	for segment #178 (3347+04.000 to 3347+47.000), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3347+47.000	3348+08.000	for segment #180 (3347+47.000 to 3348+08.000), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3348+08.000	3348+58.140	for segment #182 (3348+08.000 to 3348+58.140), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3354+67.260	3354+87.000	for segment #188 (3354+67.260 to 3354+87.000), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3354+87.000	3355+27.000	for segment #190 (3354+87.000 to 3355+27.000), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3355+27.000	3355+68.000	for segment #192 (3355+27.000 to 3355+68.000), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3355+68.000	3355+87.260	for segment #194 (3355+68.000 to 3355+87.260), traffic volume (181,700 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3448+72.150	3449+25.000	for segment #228 (3448+72.150 to 3449+25.000), traffic volume (181,950 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3448+72.150	3449+25.000	for segment #228 (3448+72.150 to 3449+25.000), Speed Change Segment of type Seven-lane Freeway Speed Change is using unbalanced lane processing with types Six-lane Freeway Speed Change and Eight-lane Freeway Speed Change
3449+25.000	3450+00.000	for segment #230 (3449+25.000 to 3450+00.000), traffic volume (181,950 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3449+25.000	3450+00.000	for segment #230 (3449+25.000 to 3450+00.000), Speed Change Segment of type Seven-lane Freeway Speed Change is using unbalanced lane processing with types Six-lane Freeway Speed Change and Eight-lane Freeway Speed Change
3450+00.000	3450+19.000	for segment #232 (3450+00.000 to 3450+19.000), traffic volume (181,950 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3450+00.000	3450+19.000	for segment #232 (3450+00.000 to 3450+19.000), Speed Change Segment of type Seven-lane Freeway Speed Change is using unbalanced lane processing with types Six-lane Freeway Speed Change and Eight-lane Freeway Speed Change
3450+19.000	3450+68.980	for segment #234 (3450+19.000 to 3450+68.980), traffic volume (181,950 vpd) for 2030 is not within the model limit (180,000 vpd) for reliable results for segment type 6SC
3450+19.000	3450+68.980	for segment #234 (3450+19.000 to 3450+68.980), Speed Change Segment of type Seven-lane Freeway Speed Change is using unbalanced lane processing with types Six-lane Freeway Speed Change and Eight-lane Freeway Speed Change

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

August 24, 2022

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0(Copy 1)
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RAISEDEX
Highway Comment: Imported from CENTRALEX - Copy.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu Jul 29 14:13:01 CDT 2021

Minimum Location: 3137+30.310
Maximum Location: 3233+59.950

Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration

First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Section 1 Evaluation

Section: Section 1
Evaluation Start Location: 3137+30.310
Evaluation End Location: 3233+59.950
Functional Class: Freeway
Type of Alignment: Divided, Multilane
Model Category: Freeway Segment
Calibration Factor: FI_EX=1.0; FI_MV=1.0; FI_SV=1.0; PDO_EX=1.0; PDO_MV=1.0; PDO_SV=1.0;

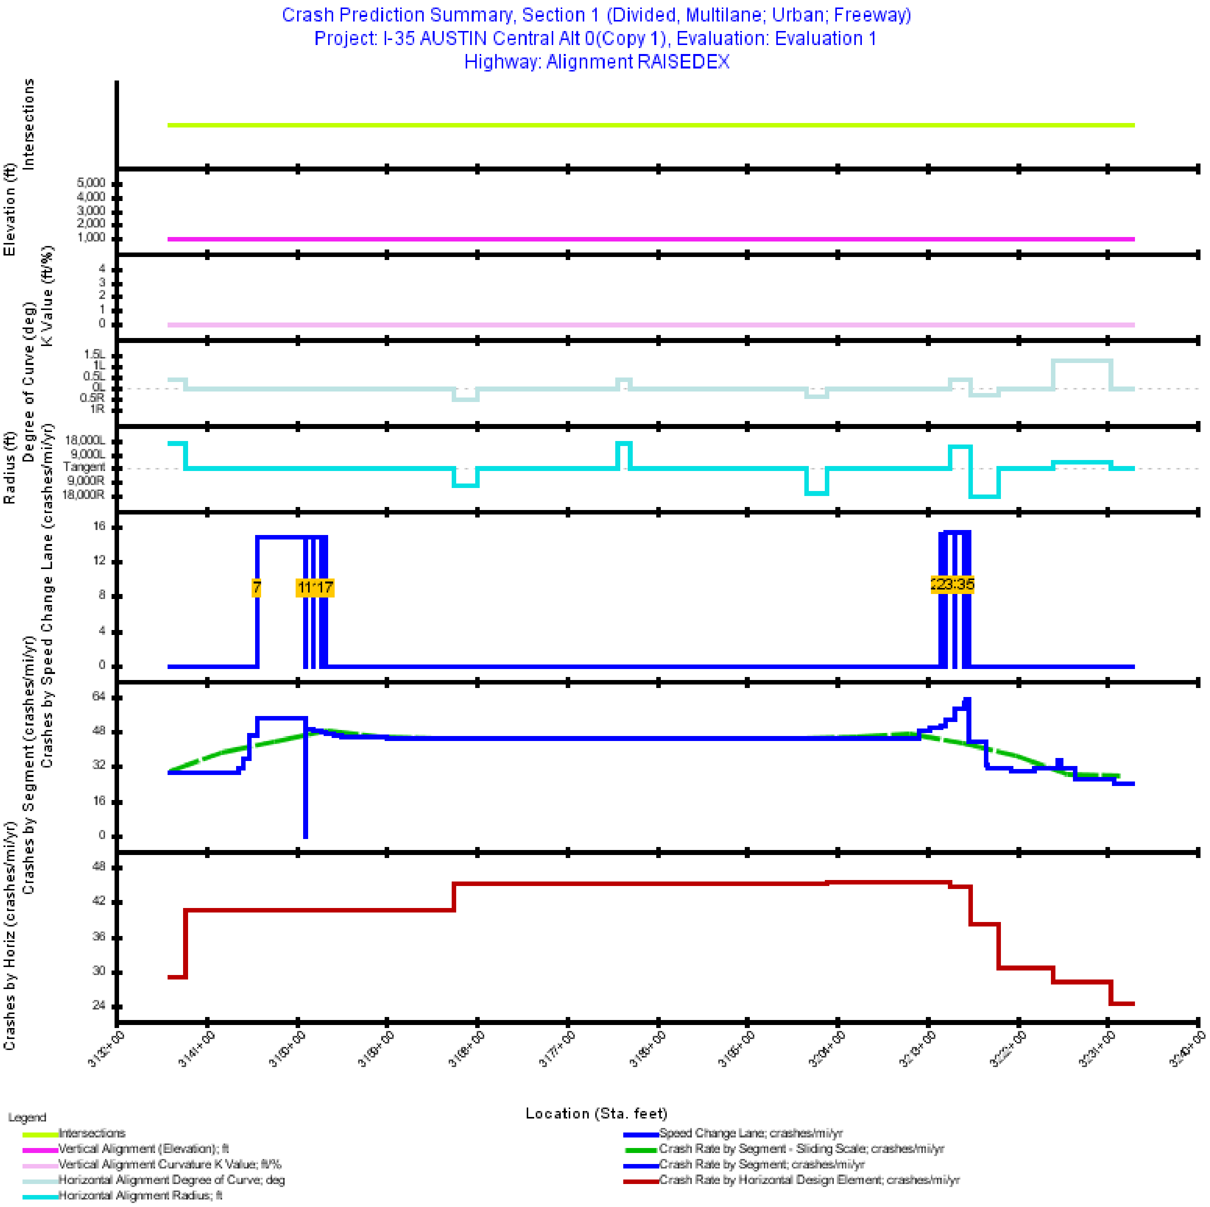

Figure 1. Crash Prediction Summary (Section 1)

Table 1. Evaluation Freeway - Homogeneous Segments (Section 1)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT	Median Width (ft)	Type	Effective Median Width (ft)
1	Four-lane Freeway	Urban	3137+30.310	3144+26.330	696.02	0.1318	2030: 101,600	2.00	Non-Traversable Median	14.00

Table 3. Predicted Freeway Crash Rates and Frequencies Summary (Section 1)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Effective Length (mi)	**1.7314**
Average Future Road AADT (vpd)	**112,032**
Predicted Crashes	
Total Crashes	**72.21**
Fatal and Injury Crashes	**18.20**
Property-Damage-Only Crashes	**54.01**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**25**
Percent Property-Damage-Only Crashes (%)	**75**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**41.7064**
FI Crash Rate (crashes/mi/yr)	**10.5127**
PDO Crash Rate (crashes/mi/yr)	**31.1937**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**70.80**
Travel Crash Rate (crashes/million veh-mi)	**1.02**
Travel FI Crash Rate (crashes/million veh-mi)	**0.26**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.76**

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present.

Table 4. Predicted Freeway Speed Change Lane Crash Rates and Frequencies Summary (Speed Change)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Length (mi)	**0.1837**
Average Future Road AADT (vpd)	**59,150**
Predicted Crashes	
Total Crashes	**2.74**
Fatal and Injury Crashes	**0.78**
Property-Damage-Only Crashes	**1.96**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**29**
Percent Property-Damage-Only Crashes (%)	**71**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**14.9173**
FI Crash Rate (crashes/mi/yr)	**4.2583**
PDO Crash Rate (crashes/mi/yr)	**10.6590**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**3.97**
Travel Crash Rate (crashes/million veh-mi)	**0.69**
Travel FI Crash Rate (crashes/million veh-mi)	**0.20**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.49**

Note: *Total Travel and Crash Rates/Million Vehicle Miles* for *Speed Change Lanes* reflect AADTs that are **half of the Freeway Segment AADTs** based on the assumption of 50/50 directional distribution.

Table 5. Predicted Crash Frequencies and Rates by Freeway Segment/Intersection (Section 1)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Effective Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Highway Segment	Other Single-vehicle Collision	0.04	1.4	0.04	1.6	0.08	3.0
Highway Segment	Collision with Parked Vehicle	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Total Single Vehicle Crashes	0.20	7.5	0.52	19.1	0.73	26.5
Highway Segment	Right-Angle Collision	0.01	0.3	0.02	0.9	0.03	1.2
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.1	0.01	0.3
Highway Segment	Other Multi-vehicle Collision	0.01	0.5	0.03	1.1	0.04	1.6
Highway Segment	Rear-end Collision	0.43	15.7	1.11	40.4	1.54	56.0
Highway Segment	Sideswipe, Same Direction Collision	0.12	4.5	0.27	9.9	0.39	14.4
Highway Segment	Total Multiple Vehicle Crashes	0.58	21.1	1.44	52.4	2.01	73.5
Highway Segment	Total Highway Segment Crashes	0.78	28.5	1.96	71.5	2.74	100.0
	Total Crashes	0.78	28.5	1.96	71.5	2.74	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 13. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
3137+30.310	3144+26.330	for segment #1 (3137+30.310 to 3144+26.330), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3137+30.310	3144+26.330	for segment #1 (3137+30.310 to 3144+26.330), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+26.330	3144+70.310	for segment #2 (3144+26.330 to 3144+70.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+26.330	3144+70.310	for segment #2 (3144+26.330 to 3144+70.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+26.330	3144+70.310	for segment #2 (3144+26.330 to 3144+70.310), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+26.330	3144+70.310	for segment #2 (3144+26.330 to 3144+70.310), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+70.310	3145+27.310	for segment #3 (3144+70.310 to 3145+27.310), Effective median width (92.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
3144+70.310	3145+27.310	for segment #3 (3144+70.310 to 3145+27.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+70.310	3145+27.310	for segment #3 (3144+70.310 to 3145+27.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+70.310	3145+27.310	for segment #3 (3144+70.310 to 3145+27.310), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3144+70.310	3145+27.310	for segment #3 (3144+70.310 to 3145+27.310), Outside barrier offset (6.00 feet) is less than the right outside shoulder width (8.00 feet). This indicates there is problem with the input data.
3145+27.310	3146+14.310	for segment #4 (3145+27.310 to 3146+14.310), Effective median width (92.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
3145+27.310	3146+14.310	for segment #4 (3145+27.310 to 3146+14.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3145+27.310	3146+14.310	for segment #4 (3145+27.310 to 3146+14.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3145+27.310	3146+14.310	for segment #4 (3145+27.310 to 3146+14.310), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3145+27.310	3146+14.310	for segment #4 (3145+27.310 to 3146+14.310), Outside barrier offset (6.00 feet) is less than the left outside shoulder width (8.00 feet). This indicates there is problem with the input data.
3146+14.310	3150+89.310	for segment #6 (3146+14.310 to 3150+89.310), Effective median width (92.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.
3146+14.310	3150+89.310	for segment #6 (3146+14.310 to 3150+89.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3146+14.310	3150+89.310	for segment #6 (3146+14.310 to 3150+89.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3146+14.310	3150+89.310	for segment #6 (3146+14.310 to 3150+89.310), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3146+14.310	3150+89.310	for segment #6 (3146+14.310 to 3150+89.310), Outside barrier offset (6.00 feet) is less than the left outside shoulder width (6.51 feet). This indicates there is problem with the input data.
3146+14.310	3150+89.310	for segment #6 (3146+14.310 to 3150+89.310), Outside barrier offset (3.54 feet) is less than the left outside shoulder width (6.51 feet). This indicates there is problem with the input data.
3150+89.310	3150+95.330	for segment #8 (3150+89.310 to 3150+95.330), Effective median width (92.00 feet) is greater than specified boundaries (90.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
3150+89.310	3150+95.330	for segment #8 (3150+89.310 to 3150+95.330), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3150+89.310	3150+95.330	for segment #8 (3150+89.310 to 3150+95.330), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3150+89.310	3150+95.330	for segment #8 (3150+89.310 to 3150+95.330), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
3212+12.090	3213+33.310	for segment #23 (3212+12.090 to 3213+33.310), Outside barrier offset (9.50 feet) is less than the left outside shoulder width (9.50 feet). This indicates there is problem with the input data.
3213+33.310	3214+31.950	for segment #24 (3213+33.310 to 3214+31.950), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3213+33.310	3214+31.950	for segment #24 (3213+33.310 to 3214+31.950), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3213+33.310	3214+31.950	for segment #24 (3213+33.310 to 3214+31.950), Outside barrier distance from edge of outside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3213+33.310	3214+31.950	for segment #24 (3213+33.310 to 3214+31.950), Outside barrier offset (8.58 feet) is less than the left outside shoulder width (8.58 feet). This indicates there is problem with the input data.
3214+31.950	3214+85.310	for segment #26 (3214+31.950 to 3214+85.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3214+31.950	3214+85.310	for segment #26 (3214+31.950 to 3214+85.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3214+31.950	3214+85.310	for segment #26 (3214+31.950 to 3214+85.310), Outside barrier offset (7.95 feet) is less than the left outside shoulder width (7.95 feet). This indicates there is problem with the input data.
3214+31.950	3214+85.310	for segment #26 (3214+31.950 to 3214+85.310), Outside barrier offset (9.63 feet) is less than the right outside shoulder width (9.63 feet). This indicates there is problem with the input data.
3214+85.310	3215+75.310	for segment #28 (3214+85.310 to 3215+75.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3214+85.310	3215+75.310	for segment #28 (3214+85.310 to 3215+75.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3214+85.310	3215+75.310	for segment #28 (3214+85.310 to 3215+75.310), Outside barrier offset (7.36 feet) is less than the left outside shoulder width (7.36 feet). This indicates there is problem with the input data.
3214+85.310	3215+75.310	for segment #28 (3214+85.310 to 3215+75.310), Outside barrier offset (8.64 feet) is less than the right outside shoulder width (8.64 feet). This indicates there is problem with the input data.
3215+75.310	3216+68.310	for segment #30 (3215+75.310 to 3216+68.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3215+75.310	3216+68.310	for segment #30 (3215+75.310 to 3216+68.310), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3215+75.310	3216+68.310	for segment #30 (3215+75.310 to 3216+68.310), Outside barrier offset (6.60 feet) is less than the left outside shoulder width (6.60 feet). This indicates there is problem with the input data.
3215+75.310	3216+68.310	for segment #30 (3215+75.310 to 3216+68.310), Outside barrier offset (7.37 feet) is less than the right outside shoulder width (7.37 feet). This indicates there is problem with the input data.
3216+68.310	3216+93.460	for segment #32 (3216+68.310 to 3216+93.460), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3216+68.310	3216+93.460	for segment #32 (3216+68.310 to 3216+93.460), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3216+68.310	3216+93.460	for segment #32 (3216+68.310 to 3216+93.460), Outside barrier offset (6.10 feet) is less than the left outside shoulder width (6.10 feet). This indicates there is problem with the input data.
3216+68.310	3216+93.460	for segment #32 (3216+68.310 to 3216+93.460), Outside barrier offset (6.55 feet) is less than the right outside shoulder width (6.55 feet). This indicates there is problem with the input data.
3216+93.460	3217+20.460	for segment #34 (3216+93.460 to 3217+20.460), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.
3216+93.460	3217+20.460	for segment #34 (3216+93.460 to 3217+20.460), Median barrier distance from edge of inside shoulder to barrier face (0.00 feet) is less than specified boundaries (0.75 feet); adjusted in CMF calculations.

3150+89.310	3150+95.330	for segment #9 (3150+89.310 to 3150+95.330), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3150+95.330	3151+69.310	for segment #11 (3150+95.330 to 3151+69.310), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3151+69.310	3152+47.310	for segment #13 (3151+69.310 to 3152+47.310), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3152+47.310	3152+94.100	for segment #15 (3152+47.310 to 3152+94.100), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3152+94.100	3152+94.240	for segment #17 (3152+94.100 to 3152+94.240), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3214+30.460	3214+31.950	for segment #25 (3214+30.460 to 3214+31.950), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3214+31.950	3214+85.310	for segment #27 (3214+31.950 to 3214+85.310), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3214+85.310	3215+75.310	for segment #29 (3214+85.310 to 3215+75.310), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3215+75.310	3216+68.310	for segment #31 (3215+75.310 to 3216+68.310), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3216+68.310	3216+93.460	for segment #33 (3216+68.310 to 3216+93.460), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC
3216+93.460	3217+20.460	for segment #35 (3216+93.460 to 3217+20.460), traffic volume (118,300 vpd) for 2030 is not within the model limit (110,000 vpd) for reliable results for segment type 4SC

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment CDNB0
Highway Comment: Imported from CDNB0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:02:47 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1095+66.446
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1095+66.446
Functional Class: Freeway C-D Road & System Ramp

Type of Alignment: One Direction

Model Category: C-D Road & System Ramp

Calibration Factor: CD_MV_FI=1.0; CD_MV_PDO=1.0; CD_SV_FI=1.0; CD_SV_PDO=1.0;

Highway Segment	Rear-end Collision	80.39	53.7	24.57	16.4	104.96	70.1
Highway Segment	Sideswipe, Same Direction Collision	19.29	12.9	9.47	6.3	28.77	19.2
Highway Segment	Total Multiple Vehicle Crashes	107.19	71.6	35.61	23.8	142.80	95.4
Highway Segment	Total Highway Segment Crashes	110.01	73.5	39.71	26.5	149.72	100.0
	Total Crashes	110.01	73.5	39.71	26.5	149.72	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+85.000	for segment #1 (1000+00.000 to 1000+85.000), traffic volume (44,000 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1000+85.000	1002+55.000	for segment #2 (1000+85.000 to 1002+55.000), traffic volume (44,000 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1002+55.000	1003+39.000	for segment #3 (1002+55.000 to 1003+39.000), traffic volume (44,000 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1003+39.000	1014+21.000	for segment #4 (1003+39.000 to 1014+21.000), traffic volume (44,000 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1014+21.000	1016+77.000	for segment #5 (1014+21.000 to 1016+77.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1016+77.000	1017+97.000	for segment #6 (1016+77.000 to 1017+97.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1017+97.000	1019+17.000	for segment #7 (1017+97.000 to 1019+17.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1019+17.000	1020+37.000	for segment #8 (1019+17.000 to 1020+37.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1020+37.000	1080+51.000	for segment #9 (1020+37.000 to 1080+51.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1080+51.000	1081+19.000	for segment #10 (1080+51.000 to 1081+19.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1081+19.000	1081+88.000	for segment #11 (1081+19.000 to 1081+88.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1081+88.000	1082+56.000	for segment #12 (1081+88.000 to 1082+56.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1082+56.000	1086+96.000	for segment #13 (1082+56.000 to 1086+96.000), traffic volume (59,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1086+96.000	1095+66.446	for segment #14 (1086+96.000 to 1095+66.446), traffic volume (51,550 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment CDSB0
Highway Comment: Imported from CDSB0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:04:46 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1096+93.896
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1096+93.896
Functional Class: Freeway C-D Road & System Ramp
Type of Alignment: One Direction
Model Category: C-D Road & System Ramp
Calibration Factor: CD_MV_FI=1.0; CD_MV_PDO=1.0; CD_SV_FI=1.0; CD_SV_PDO=1.0;

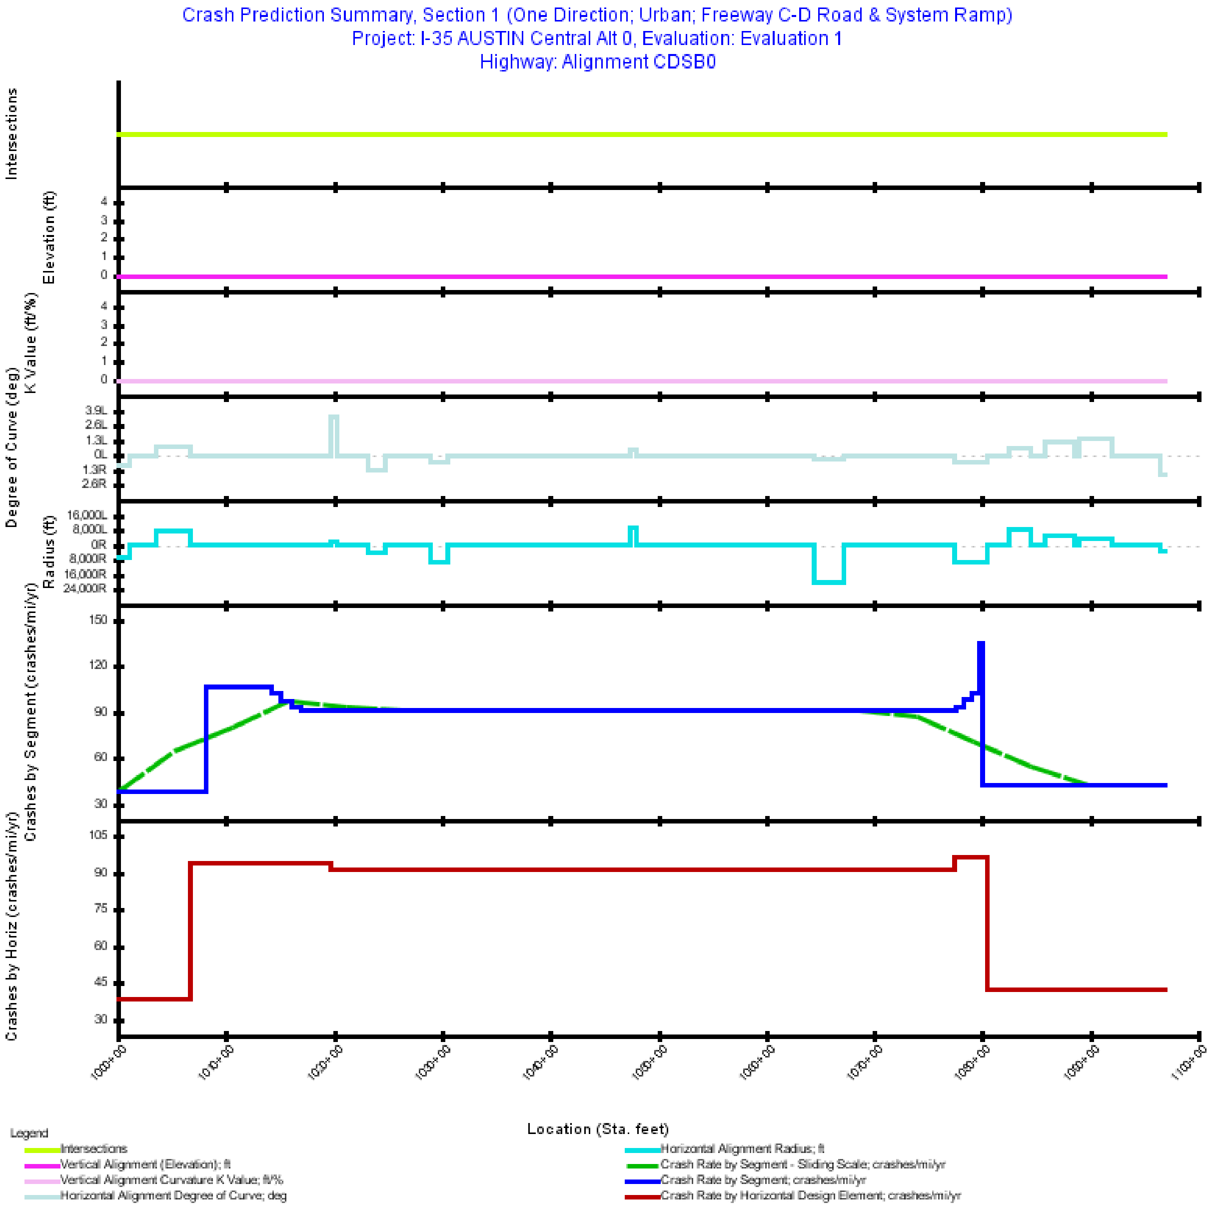

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road Two-lane C-D Ramp	Urban	1000+00.000	1008+11.000	811.00	0.1536	2030: 50,050
2	Freeway Ramp and C-D Road Two-lane C-D Ramp	Urban	1008+11.000	1014+24.000	613.00	0.1161	2030: 58,750
3	Freeway Ramp and C-D Road Two-lane C-D Ramp	Urban	1014+24.000	1015+14.000	90.00	0.0170	2030: 58,750
4	Freeway Ramp and C-D Road Two-lane C-D Ramp	Urban	1015+14.000	1016+04.000	90.00	0.0170	2030: 58,750
5	Freeway Ramp and C-D Road Two-lane C-D Ramp	Urban	1016+04.000	1016+94.000	90.00	0.0170	2030: 58,750

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.01	0.0	0.09	0.1	0.10	0.1
Highway Segment	Collision with Fixed Object	2.11	1.4	3.00	2.0	5.11	3.5
Highway Segment	Collision with Other Object	0.15	0.1	0.58	0.4	0.73	0.5
Highway Segment	Other Single-vehicle Collision	0.61	0.4	0.45	0.3	1.06	0.7
Highway Segment	Collision with Parked Vehicle	0.04	0.0	0.07	0.0	0.11	0.1
Highway Segment	Total Single Vehicle Crashes	2.92	2.0	4.19	2.9	7.11	4.9
Highway Segment	Right-Angle Collision	3.20	2.2	0.65	0.4	3.85	2.6
Highway Segment	Head-on Collision	0.83	0.6	0.07	0.0	0.90	0.6
Highway Segment	Other Multi-vehicle Collision	3.20	2.2	0.86	0.6	4.07	2.8
Highway Segment	Rear-end Collision	77.52	52.9	24.86	17.0	102.38	69.9
Highway Segment	Sideswipe, Same Direction Collision	18.60	12.7	9.58	6.5	28.19	19.2
Highway Segment	Total Multiple Vehicle Crashes	103.36	70.6	36.03	24.6	139.38	95.1
Highway Segment	Total Highway Segment Crashes	106.28	72.5	40.22	27.5	146.50	100.0
	Total Crashes	106.28	72.5	40.22	27.5	146.50	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1008+11.000	for segment #1 (1000+00.000 to 1008+11.000), traffic volume (50,050 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1008+11.000	1014+24.000	for segment #2 (1008+11.000 to 1014+24.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1014+24.000	1015+14.000	for segment #3 (1014+24.000 to 1015+14.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1015+14.000	1016+04.000	for segment #4 (1015+14.000 to 1016+04.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1016+04.000	1016+94.000	for segment #5 (1016+04.000 to 1016+94.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1016+94.000	1077+52.000	for segment #6 (1016+94.000 to 1077+52.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1077+52.000	1078+24.000	for segment #7 (1077+52.000 to 1078+24.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1078+24.000	1078+97.000	for segment #8 (1078+24.000 to 1078+97.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1078+97.000	1079+69.000	for segment #9 (1078+97.000 to 1079+69.000), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1079+69.000	1080+05.130	for segment #10 (1079+69.000 to 1080+05.130), traffic volume (58,750 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD
1080+05.130	1096+93.896	for segment #11 (1080+05.130 to 1096+93.896), traffic volume (46,300 vpd) for 2030 is not within the model limit (32,000 vpd) for reliable results for segment type 2CD

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBX2900
Highway Comment: Imported from RGPNBX2900.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:25:02 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1022+06.001
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1022+06.001
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

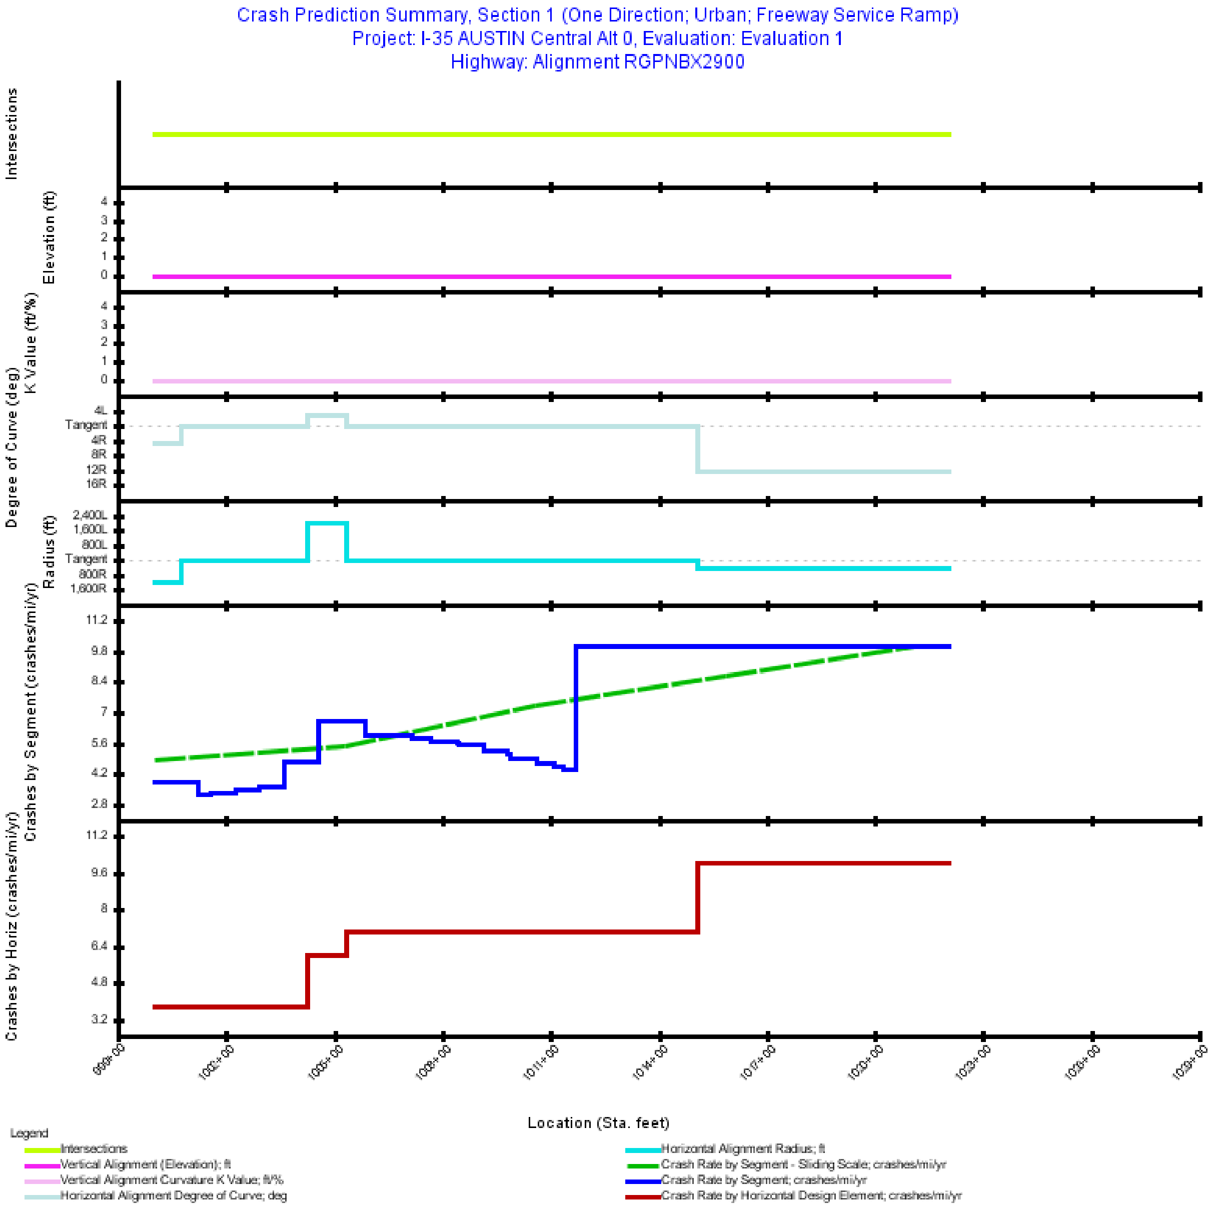

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1001+25.000	125.00	0.0237	2030: 12,850
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+25.000	1001+59.000	34.00	0.0064	2030: 12,850
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+59.000	1002+26.000	67.00	0.0127	2030: 12,850
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+26.000	1002+93.000	67.00	0.0127	2030: 12,850
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+93.000	1003+60.000	67.00	0.0127	2030: 12,850
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+60.000	1004+58.000	98.00	0.0186	2030: 12,850

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.01	0.2	0.03	1.1	0.04	1.3
Highway Segment	Collision with Fixed Object	0.97	31.7	1.08	35.4	2.05	67.2
Highway Segment	Collision with Other Object	0.07	2.2	0.21	6.9	0.28	9.1
Highway Segment	Other Single-vehicle Collision	0.28	9.1	0.16	5.3	0.44	14.4
Highway Segment	Collision with Parked Vehicle	0.02	0.7	0.02	0.8	0.04	1.5
Highway Segment	Total Single Vehicle Crashes	1.34	44.0	1.51	49.5	2.85	93.5
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.01	0.2
Highway Segment	Rear-end Collision	0.04	1.4	0.10	3.3	0.14	4.6
Highway Segment	Sideswipe, Same Direction Collision	0.01	0.3	0.04	1.3	0.05	1.6
Highway Segment	Total Multiple Vehicle Crashes	0.06	1.8	0.14	4.7	0.20	6.5
Highway Segment	Total Highway Segment Crashes	1.40	45.8	1.65	54.2	3.05	100.0
	Total Crashes	1.40	45.8	1.65	54.2	3.05	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1001+25.000	for segment #1 (1000+00.000 to 1001+25.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1001+25.000	for segment #1 (1000+00.000 to 1001+25.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+25.000	1001+59.000	for segment #2 (1001+25.000 to 1001+59.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+25.000	1001+59.000	for segment #2 (1001+25.000 to 1001+59.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+59.000	1002+26.000	for segment #3 (1001+59.000 to 1002+26.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+59.000	1002+26.000	for segment #3 (1001+59.000 to 1002+26.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+26.000	1002+93.000	for segment #4 (1002+26.000 to 1002+93.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+26.000	1002+93.000	for segment #4 (1002+26.000 to 1002+93.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+93.000	1003+60.000	for segment #5 (1002+93.000 to 1003+60.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+93.000	1003+60.000	for segment #5 (1002+93.000 to 1003+60.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+60.000	1004+58.000	for segment #6 (1003+60.000 to 1004+58.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+60.000	1004+58.000	for segment #6 (1003+60.000 to 1004+58.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+58.000	1005+88.000	for segment #7 (1004+58.000 to 1005+88.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+58.000	1005+88.000	for segment #7 (1004+58.000 to 1005+88.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+88.000	1007+18.000	for segment #8 (1005+88.000 to 1007+18.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+88.000	1007+18.000	for segment #8 (1005+88.000 to 1007+18.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+18.000	1007+30.000	for segment #9 (1007+18.000 to 1007+30.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+18.000	1007+30.000	for segment #9 (1007+18.000 to 1007+30.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+30.000	1007+67.000	for segment #10 (1007+30.000 to 1007+67.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+30.000	1007+67.000	for segment #10 (1007+30.000 to 1007+67.000), Left shoulder width (0.25 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+67.000	1008+41.000	for segment #11 (1007+67.000 to 1008+41.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+67.000	1008+41.000	for segment #11 (1007+67.000 to 1008+41.000), Left shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+41.000	1008+48.000	for segment #12 (1008+41.000 to 1008+48.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+41.000	1008+48.000	for segment #12 (1008+41.000 to 1008+48.000), Left shoulder width (1.55 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+48.000	1009+15.000	for segment #13 (1008+48.000 to 1009+15.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1009+15.000	1009+78.000	for segment #14 (1009+15.000 to 1009+78.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1009+78.000	1009+88.000	for segment #15 (1009+78.000 to 1009+88.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1009+88.000	1010+62.000	for segment #16 (1009+88.000 to 1010+62.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1010+62.000	1011+08.000	for segment #17 (1010+62.000 to 1011+08.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1011+08.000	1011+36.000	for segment #18 (1011+08.000 to 1011+36.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1011+36.000	1011+72.000	for segment #19 (1011+36.000 to 1011+72.000), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1011+72.000	1022+06.001	for segment #20 (1011+72.000 to 1022+06.001), The ramp type for Ramp Alignment RGPNBX2900 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBXKNG0
Highway Comment: Imported from RGPNBXKNG0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:29:52 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1004+36.175
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1004+36.175
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

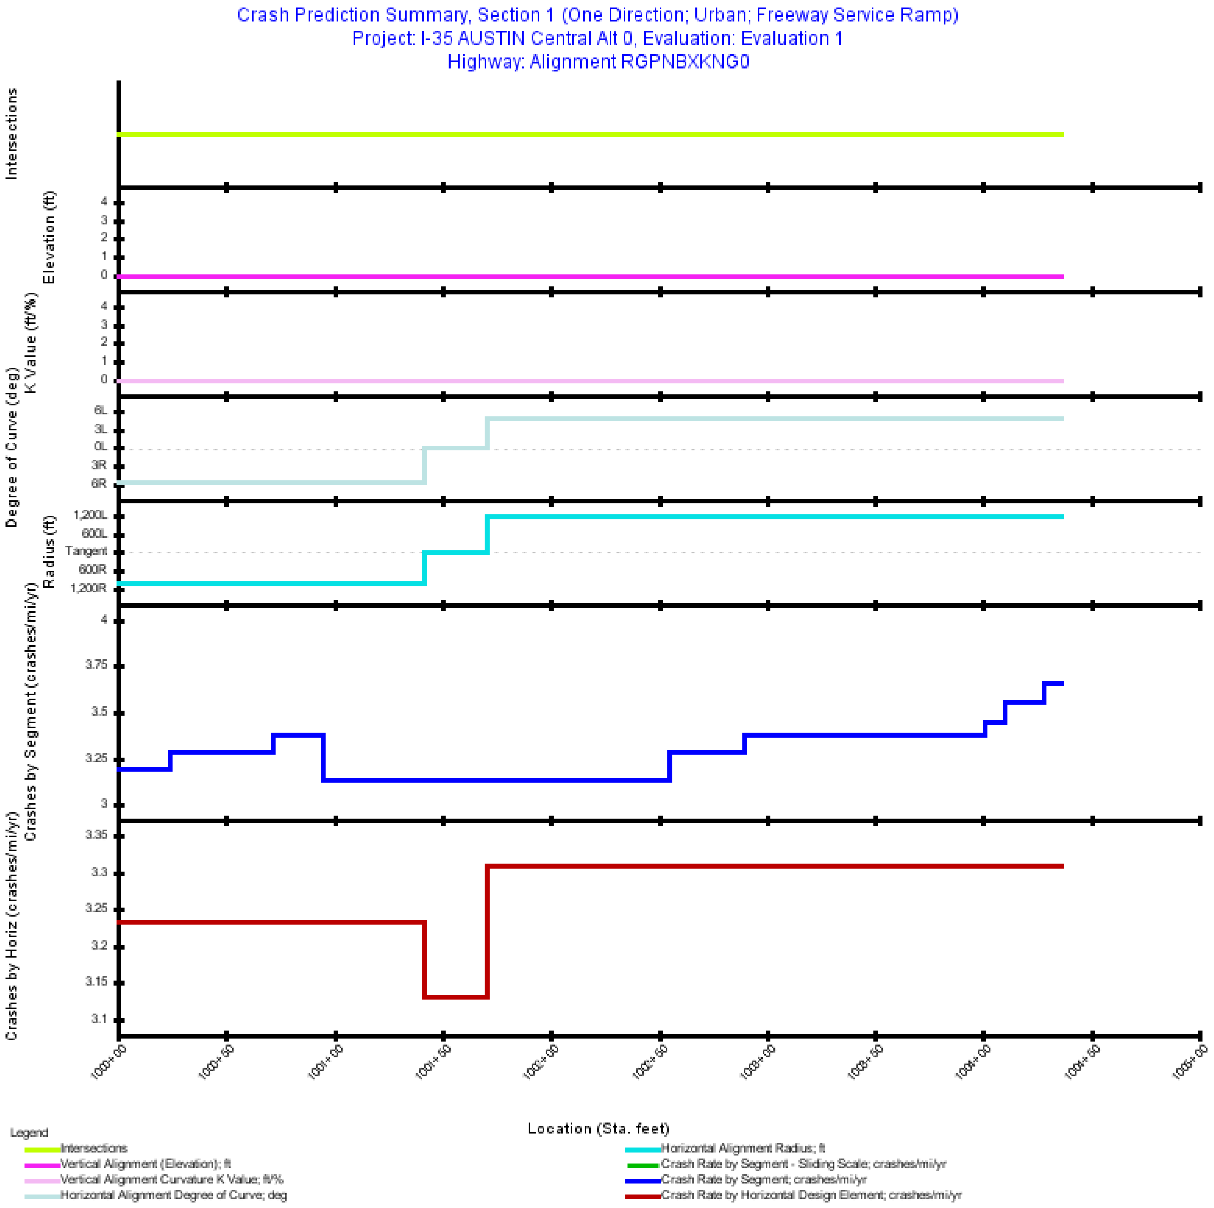

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+24.000	24.00	0.0045	2030: 9,500
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+24.000	1000+72.000	48.00	0.0091	2030: 9,500
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+72.000	1000+95.000	23.00	0.0044	2030: 9,500
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+95.000	1002+55.000	160.00	0.0303	2030: 9,500
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+55.000	1002+90.000	35.00	0.0066	2030: 9,500
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+90.000	1004+01.000	111.00	0.0210	2030: 9,500
7	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+01.000	1004+10.000	9.00	0.0017	2030: 9,500
8	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+10.000	1004+28.000	18.00	0.0034	2030: 9,500
9	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+28.000	1004+36.175	8.18	0.0015	2030: 9,500

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.0826**
Average Future Road AADT (vpd)	**9,500**
Predicted Crashes

Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.00	1.3	0.01	3.2	0.01	4.5
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.3	0.00	1.2	0.00	1.5
Highway Segment	Total Multiple Vehicle Crashes	0.01	1.8	0.01	4.6	0.02	6.4
Highway Segment	Total Highway Segment Crashes	0.13	48.2	0.14	51.8	0.27	100.0
	Total Crashes	0.13	48.2	0.14	51.8	0.27	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+24.000	for segment #1 (1000+00.000 to 1000+24.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+24.000	1000+72.000	for segment #2 (1000+24.000 to 1000+72.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+72.000	1000+95.000	for segment #3 (1000+72.000 to 1000+95.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+95.000	1002+55.000	for segment #4 (1000+95.000 to 1002+55.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+55.000	1002+90.000	for segment #5 (1002+55.000 to 1002+90.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+90.000	1004+01.000	for segment #6 (1002+90.000 to 1004+01.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+01.000	1004+10.000	for segment #7 (1004+01.000 to 1004+10.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+10.000	1004+28.000	for segment #8 (1004+10.000 to 1004+28.000), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+28.000	1004+36.175	for segment #9 (1004+28.000 to 1004+36.175), The ramp type for Ramp Alignment RGPNBXKNG0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBNAIR0
Highway Comment: Imported from RGPNBNAIR0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:20:11 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1004+39.705
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1004+39.705
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

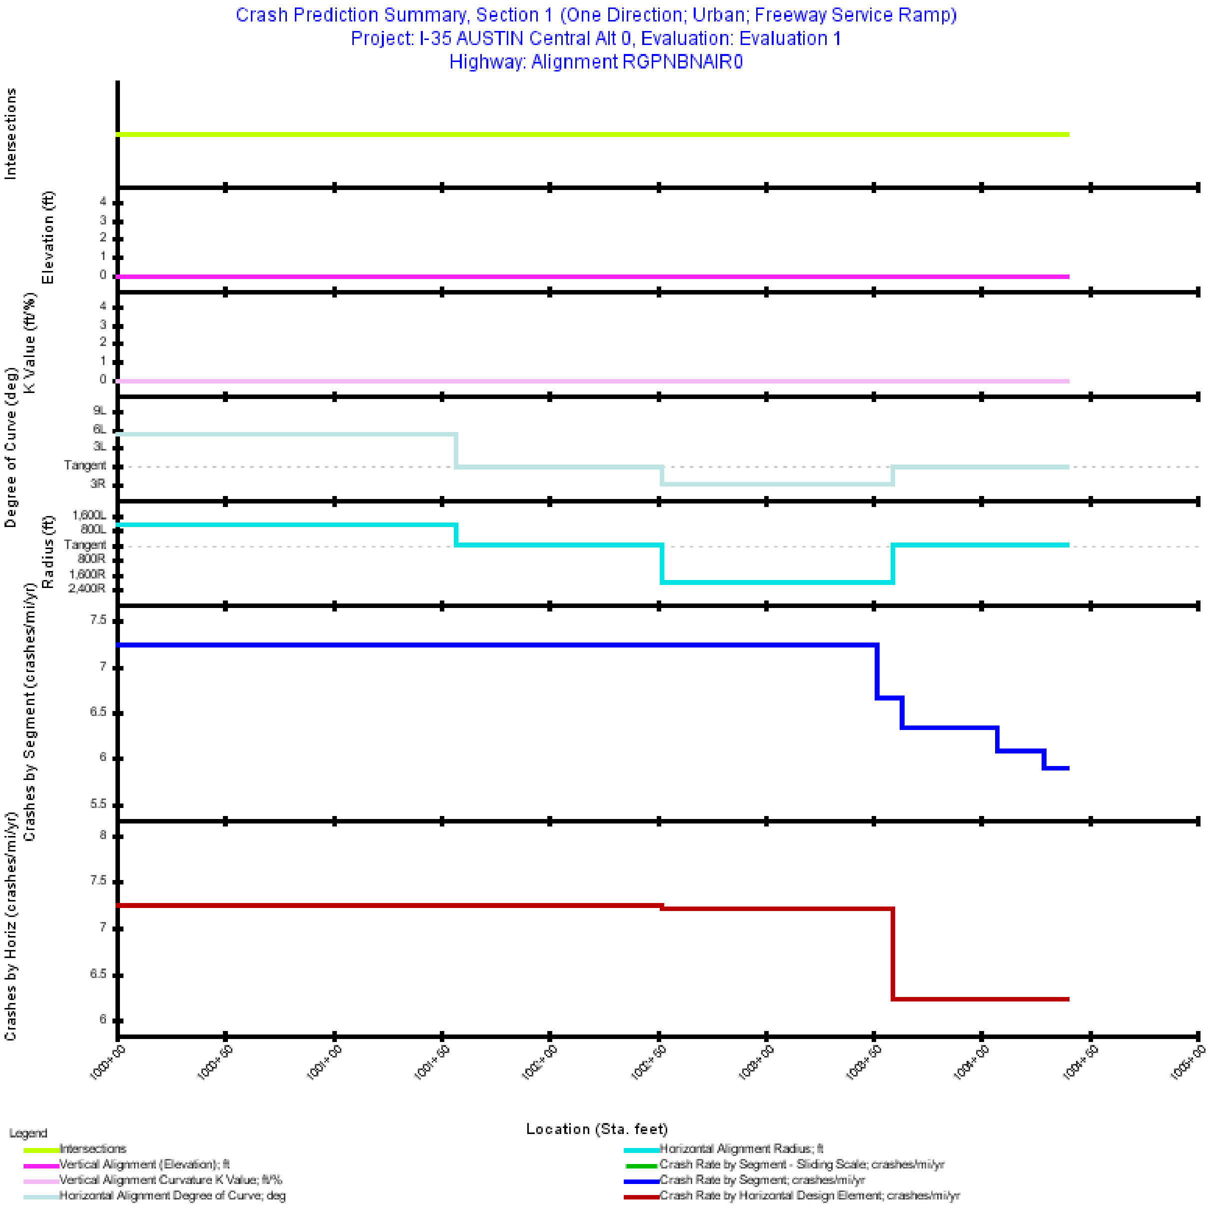

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1003+52.000	352.00	0.0667	2030: 21,350
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1003+52.000	1003+63.000	11.00	0.0021	2030: 21,350

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1003+52.000	for segment #1 (1000+00.000 to 1003+52.000), The ramp type for Ramp Alignment RGPNBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1003+52.000	for segment #1 (1000+00.000 to 1003+52.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1003+52.000	for segment #1 (1000+00.000 to 1003+52.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+52.000	1003+63.000	for segment #2 (1003+52.000 to 1003+63.000), The ramp type for Ramp Alignment RGPNBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+52.000	1003+63.000	for segment #2 (1003+52.000 to 1003+63.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+52.000	1003+63.000	for segment #2 (1003+52.000 to 1003+63.000), Right shoulder width (0.25 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+63.000	1003+85.000	for segment #3 (1003+63.000 to 1003+85.000), The ramp type for Ramp Alignment RGPNBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+63.000	1003+85.000	for segment #3 (1003+63.000 to 1003+85.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+63.000	1003+85.000	for segment #3 (1003+63.000 to 1003+85.000), Right shoulder width (1.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+85.000	1004+07.000	for segment #4 (1003+85.000 to 1004+07.000), The ramp type for Ramp Alignment RGPNBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+85.000	1004+07.000	for segment #4 (1003+85.000 to 1004+07.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+07.000	1004+29.000	for segment #5 (1004+07.000 to 1004+29.000), The ramp type for Ramp Alignment RGPNBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+07.000	1004+29.000	for segment #5 (1004+07.000 to 1004+29.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+29.000	1004+39.705	for segment #6 (1004+29.000 to 1004+39.705), The ramp type for Ramp Alignment RGPNBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+29.000	1004+39.705	for segment #6 (1004+29.000 to 1004+39.705), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1003+52.000	for segment #1 (1000+00.000 to 1003+52.000), traffic volume (21,350 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1003+52.000	1003+63.000	for segment #2 (1003+52.000 to 1003+63.000), traffic volume (21,350 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1003+63.000	1003+85.000	for segment #3 (1003+63.000 to 1003+85.000), traffic volume (21,350 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1003+85.000	1004+07.000	for segment #4 (1003+85.000 to 1004+07.000), traffic volume (21,350 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1004+07.000	1004+29.000	for segment #5 (1004+07.000 to 1004+29.000), traffic volume (21,350 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1004+29.000	1004+39.705	for segment #6 (1004+29.000 to 1004+39.705), traffic volume (21,350 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1002+33.535
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1002+73.820
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.2366**
Average Future Road AADT (vpd)	**10,500**
Predicted Crashes	
Total Crashes	**0.86**
Fatal and Injury Crashes	**0.35**
Property-Damage-Only Crashes	**0.51**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**41**
Percent Property-Damage-Only Crashes (%)	**59**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**3.6249**
FI Crash Rate (crashes/mi/yr)	**1.4907**
PDO Crash Rate (crashes/mi/yr)	**2.1342**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.91**
Travel Crash Rate (crashes/million veh-mi)	**0.95**
Travel FI Crash Rate (crashes/million veh-mi)	**0.39**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.56**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.1	0.01	0.9	0.01	1.0
Highway Segment	Collision with Fixed Object	0.20	23.3	0.25	29.2	0.45	52.4
Highway Segment	Collision with Other Object	0.01	1.6	0.05	5.7	0.06	7.3
Highway Segment	Other Single-vehicle Collision	0.06	6.7	0.04	4.4	0.10	11.1
Highway Segment	Collision with Parked Vehicle	0.00	0.5	0.01	0.7	0.01	1.1
Highway Segment	Total Single Vehicle Crashes	0.28	32.2	0.35	40.7	0.63	72.9
Highway Segment	Right-Angle Collision	0.00	0.3	0.00	0.3	0.01	0.6
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.3	0.00	0.4	0.01	0.7
Highway Segment	Rear-end Collision	0.06	6.7	0.11	12.5	0.17	19.2
Highway Segment	Sideswipe, Same Direction Collision	0.01	1.6	0.04	4.8	0.06	6.4
Highway Segment	Total Multiple Vehicle Crashes	0.08	8.9	0.16	18.1	0.23	27.1
Highway Segment	Total Highway Segment Crashes	0.35	41.1	0.51	58.9	0.86	100.0
	Total Crashes	0.35	41.1	0.51	58.9	0.86	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+50.000	for segment #1 (1000+00.000 to 1000+50.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1000+50.000	for segment #1 (1000+00.000 to 1000+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+50.000	1001+50.000	for segment #2 (1000+50.000 to 1001+50.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+50.000	1001+50.000	for segment #2 (1000+50.000 to 1001+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+50.000	1002+50.000	for segment #3 (1001+50.000 to 1002+50.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+50.000	1002+50.000	for segment #3 (1001+50.000 to 1002+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+50.000	1003+49.000	for segment #4 (1002+50.000 to 1003+49.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+50.000	1003+49.000	for segment #4 (1002+50.000 to 1003+49.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+49.000	1004+49.000	for segment #5 (1003+49.000 to 1004+49.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+49.000	1004+49.000	for segment #5 (1003+49.000 to 1004+49.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+49.000	1005+48.000	for segment #6 (1004+49.000 to 1005+48.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+49.000	1005+48.000	for segment #6 (1004+49.000 to 1005+48.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+48.000	1006+48.000	for segment #7 (1005+48.000 to 1006+48.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+48.000	1006+48.000	for segment #7 (1005+48.000 to 1006+48.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+48.000	1007+48.000	for segment #8 (1006+48.000 to 1007+48.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1006+48.000	1007+48.000	for segment #8 (1006+48.000 to 1007+48.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+48.000	1007+97.000	for segment #9 (1007+48.000 to 1007+97.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1007+48.000	1007+97.000	for segment #9 (1007+48.000 to 1007+97.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+97.000	1009+47.000	for segment #10 (1007+97.000 to 1009+47.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1007+97.000	1009+47.000	for segment #10 (1007+97.000 to 1009+47.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+47.000	1009+74.000	for segment #11 (1009+47.000 to 1009+74.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1009+47.000	1009+74.000	for segment #11 (1009+47.000 to 1009+74.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+74.000	1010+28.000	for segment #12 (1009+74.000 to 1010+28.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1009+74.000	1010+28.000	for segment #12 (1009+74.000 to 1010+28.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1010+28.000	1012+20.000	for segment #13 (1010+28.000 to 1012+20.000), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+28.000	1012+20.000	for segment #13 (1010+28.000 to 1012+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1012+20.000	1012+49.425	for segment #14 (1012+20.000 to 1012+49.425), The ramp type for Ramp Alignment RGPNBN120 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1012+20.000	1012+49.425	for segment #14 (1012+20.000 to 1012+49.425), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1007+02.360
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+48.000	48.00	0.0091	2030: 13,350
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+48.000	1001+43.000	95.00	0.0180	2030: 13,350
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+43.000	1001+90.000	47.00	0.0089	2030: 13,350
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+90.000	1002+28.000	38.00	0.0072	2030: 13,350
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+28.000	1002+58.000	30.00	0.0057	2030: 13,350
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+58.000	1002+89.000	31.00	0.0059	2030: 13,350
7	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+89.000	1003+20.000	31.00	0.0059	2030: 13,350
8	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+20.000	1003+50.000	30.00	0.0057	2030: 13,350
9	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+50.000	1003+81.000	31.00	0.0059	2030: 13,350
10	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+81.000	1004+12.000	31.00	0.0059	2030: 13,350
11	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+12.000	1004+42.000	30.00	0.0057	2030: 13,350
12	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+42.000	1004+73.000	31.00	0.0059	2030: 13,350
13	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+73.000	1005+04.000	31.00	0.0059	2030: 13,350
14	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1005+04.000	1005+34.000	30.00	0.0057	2030: 13,350
15	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1005+34.000	1005+65.000	31.00	0.0059	2030: 13,350
16	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1005+65.000	1005+96.000	31.00	0.0059	2030: 13,350
17	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1005+96.000	1006+26.000	30.00	0.0057	2030: 13,350
18	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1006+26.000	1006+57.000	31.00	0.0059	2030: 13,350
19	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1006+57.000	1006+88.000	31.00	0.0059	2030: 13,350
20	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1006+88.000	1007+02.360	14.36	0.0027	2030: 13,350

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.1330**
Average Future Road AADT (vpd)	**13,350**
Predicted Crashes	
Total Crashes	**0.60**
Fatal and Injury Crashes	**0.29**
Property-Damage-Only Crashes	**0.31**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**48**
Percent Property-Damage-Only Crashes (%)	**52**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**4.4904**
FI Crash Rate (crashes/mi/yr)	**2.1624**
PDO Crash Rate (crashes/mi/yr)	**2.3280**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.65**
Travel Crash Rate (crashes/million veh-mi)	**0.92**
Travel FI Crash Rate (crashes/million veh-mi)	**0.44**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.48**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)
1	1000+00.000	1000+48.000	0.0091	0.038	0.0378	0.0201	0.0177	4.1581	0.85

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.20	33.0	0.19	32.3	0.39	65.3
Highway Segment	Collision with Other Object	0.01	2.3	0.04	6.3	0.05	8.6
Highway Segment	Other Single-vehicle Collision	0.06	9.5	0.03	4.8	0.09	14.3
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.7	0.01	1.4
Highway Segment	Total Single Vehicle Crashes	0.27	45.7	0.27	45.1	0.54	90.8
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.2	0.00	0.2
Highway Segment	Rear-end Collision	0.01	1.9	0.03	4.7	0.04	6.5
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.4	0.01	1.8	0.01	2.2
Highway Segment	Total Multiple Vehicle Crashes	0.01	2.5	0.04	6.8	0.06	9.2
Highway Segment	Total Highway Segment Crashes	0.29	48.2	0.31	51.8	0.60	100.0
	Total Crashes	0.29	48.2	0.31	51.8	0.60	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+48.000	for segment #1 (1000+00.000 to 1000+48.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+48.000	for segment #1 (1000+00.000 to 1000+48.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+48.000	1001+43.000	for segment #2 (1000+48.000 to 1001+43.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+48.000	1001+43.000	for segment #2 (1000+48.000 to 1001+43.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+43.000	1001+90.000	for segment #3 (1001+43.000 to 1001+90.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+43.000	1001+90.000	for segment #3 (1001+43.000 to 1001+90.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+90.000	1002+28.000	for segment #4 (1001+90.000 to 1002+28.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+90.000	1002+28.000	for segment #4 (1001+90.000 to 1002+28.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+90.000	1002+28.000	for segment #4 (1001+90.000 to 1002+28.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+28.000	1002+58.000	for segment #5 (1002+28.000 to 1002+58.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+28.000	1002+58.000	for segment #5 (1002+28.000 to 1002+58.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+28.000	1002+58.000	for segment #5 (1002+28.000 to 1002+58.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+58.000	1002+89.000	for segment #6 (1002+58.000 to 1002+89.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+58.000	1002+89.000	for segment #6 (1002+58.000 to 1002+89.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+58.000	1002+89.000	for segment #6 (1002+58.000 to 1002+89.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+89.000	1003+20.000	for segment #7 (1002+89.000 to 1003+20.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+89.000	1003+20.000	for segment #7 (1002+89.000 to 1003+20.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+89.000	1003+20.000	for segment #7 (1002+89.000 to 1003+20.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+20.000	1003+50.000	for segment #8 (1003+20.000 to 1003+50.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+20.000	1003+50.000	for segment #8 (1003+20.000 to 1003+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+20.000	1003+50.000	for segment #8 (1003+20.000 to 1003+50.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+50.000	1003+81.000	for segment #9 (1003+50.000 to 1003+81.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+50.000	1003+81.000	for segment #9 (1003+50.000 to 1003+81.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+50.000	1003+81.000	for segment #9 (1003+50.000 to 1003+81.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+81.000	1004+12.000	for segment #10 (1003+81.000 to 1004+12.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+81.000	1004+12.000	for segment #10 (1003+81.000 to 1004+12.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+81.000	1004+12.000	for segment #10 (1003+81.000 to 1004+12.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+12.000	1004+42.000	for segment #11 (1004+12.000 to 1004+42.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1004+12.000	1004+42.000	for segment #11 (1004+12.000 to 1004+42.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+12.000	1004+42.000	for segment #11 (1004+12.000 to 1004+42.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+42.000	1004+73.000	for segment #12 (1004+42.000 to 1004+73.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+42.000	1004+73.000	for segment #12 (1004+42.000 to 1004+73.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+42.000	1004+73.000	for segment #12 (1004+42.000 to 1004+73.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+73.000	1005+04.000	for segment #13 (1004+73.000 to 1005+04.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+73.000	1005+04.000	for segment #13 (1004+73.000 to 1005+04.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+73.000	1005+04.000	for segment #13 (1004+73.000 to 1005+04.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+04.000	1005+34.000	for segment #14 (1005+04.000 to 1005+34.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+04.000	1005+34.000	for segment #14 (1005+04.000 to 1005+34.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+04.000	1005+34.000	for segment #14 (1005+04.000 to 1005+34.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+34.000	1005+65.000	for segment #15 (1005+34.000 to 1005+65.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+34.000	1005+65.000	for segment #15 (1005+34.000 to 1005+65.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+34.000	1005+65.000	for segment #15 (1005+34.000 to 1005+65.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+65.000	1005+96.000	for segment #16 (1005+65.000 to 1005+96.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+65.000	1005+96.000	for segment #16 (1005+65.000 to 1005+96.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+65.000	1005+96.000	for segment #16 (1005+65.000 to 1005+96.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+96.000	1006+26.000	for segment #17 (1005+96.000 to 1006+26.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+96.000	1006+26.000	for segment #17 (1005+96.000 to 1006+26.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+96.000	1006+26.000	for segment #17 (1005+96.000 to 1006+26.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+26.000	1006+57.000	for segment #18 (1006+26.000 to 1006+57.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+26.000	1006+57.000	for segment #18 (1006+26.000 to 1006+57.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+26.000	1006+57.000	for segment #18 (1006+26.000 to 1006+57.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+57.000	1006+88.000	for segment #19 (1006+57.000 to 1006+88.000), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+57.000	1006+88.000	for segment #19 (1006+57.000 to 1006+88.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+57.000	1006+88.000	for segment #19 (1006+57.000 to 1006+88.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+88.000	1007+02.360	for segment #20 (1006+88.000 to 1007+02.360), The ramp type for Ramp Alignment RGPNBX150 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+88.000	1007+02.360	for segment #20 (1006+88.000 to 1007+02.360), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+88.000	1007+02.360	for segment #20 (1006+88.000 to 1007+02.360), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBN70
Highway Comment: Imported from RGPNBN70.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:18:48 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1003+76.312
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1003+76.312
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

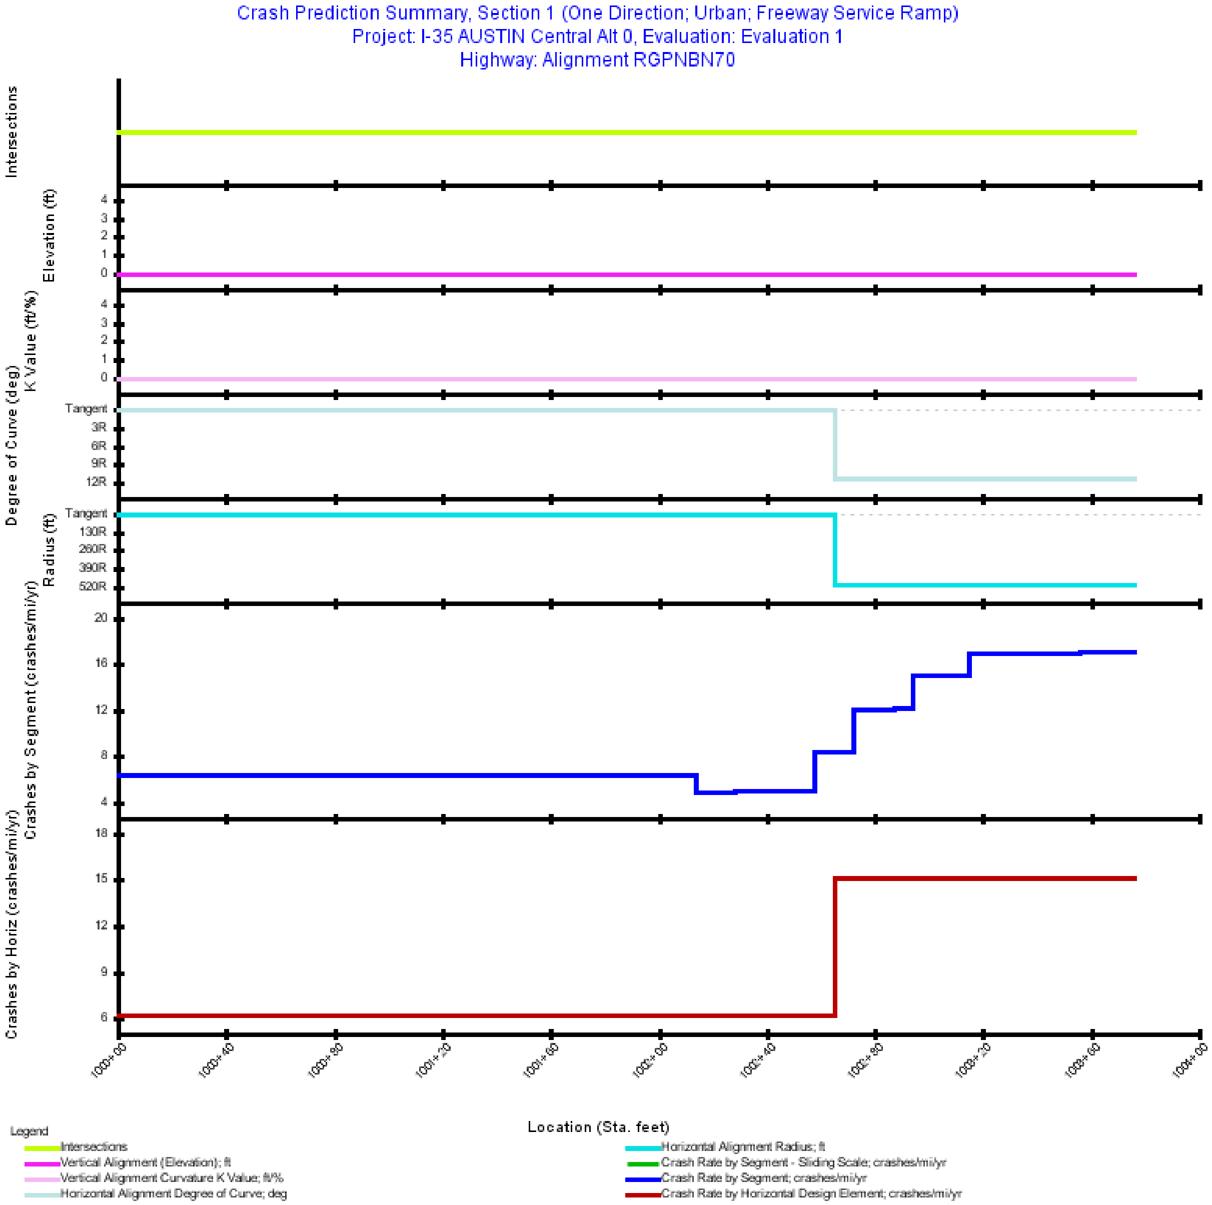

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1002+14.000	214.00	0.0405	2030: 18,400
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+14.000	1002+28.000	14.00	0.0027	2030: 18,400
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+28.000	1002+43.000	15.00	0.0028	2030: 18,400
4	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+43.000	1002+58.000	15.00	0.0028	2030: 18,400
5	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+58.000	1002+72.000	14.00	0.0027	2030: 18,400
6	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+72.000	1002+87.000	15.00	0.0028	2030: 18,400
7	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+87.000	1002+94.000	7.00	0.0013	2030: 18,400
8	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+94.000	1003+15.000	21.00	0.0040	2030: 18,400
9	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1003+15.000	1003+56.000	41.00	0.0078	2030: 18,400
10	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1003+56.000	1003+76.312	20.31	0.0038	2030: 18,400

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.0713**
Average Future Road AADT (vpd)	**18,400**
Predicted Crashes	
Total Crashes	**0.63**
Fatal and Injury Crashes	**0.30**
Property-Damage-Only Crashes	**0.33**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**47**
Percent Property-Damage-Only Crashes (%)	**53**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**8.8028**
FI Crash Rate (crashes/mi/yr)	**4.1777**
PDO Crash Rate (crashes/mi/yr)	**4.6251**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.48**
Travel Crash Rate (crashes/million veh-mi)	**1.31**
Travel FI Crash Rate (crashes/million veh-mi)	**0.62**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.69**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Total	0.0057	0.0174	0.1127	0.1619	0.3296

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.1	0.01	0.8	0.01	0.9
Highway Segment	Collision with Fixed Object	0.16	25.6	0.16	26.2	0.33	51.8
Highway Segment	Collision with Other Object	0.01	1.8	0.03	5.1	0.04	6.9
Highway Segment	Other Single-vehicle Collision	0.05	7.4	0.03	3.9	0.07	11.3
Highway Segment	Collision with Parked Vehicle	0.00	0.5	0.00	0.6	0.01	1.1
Highway Segment	Total Single Vehicle Crashes	0.22	35.5	0.23	36.6	0.45	72.1
Highway Segment	Right-Angle Collision	0.00	0.4	0.00	0.3	0.00	0.7
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.4	0.00	0.4	0.01	0.8
Highway Segment	Rear-end Collision	0.06	9.0	0.07	11.0	0.12	20.0
Highway Segment	Sideswipe, Same Direction Collision	0.01	2.2	0.03	4.3	0.04	6.4
Highway Segment	Total Multiple Vehicle Crashes	0.07	12.0	0.10	16.0	0.17	27.9
Highway Segment	Total Highway Segment Crashes	0.30	47.5	0.33	52.5	0.63	100.0
	Total Crashes	0.30	47.5	0.33	52.5	0.63	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1002+14.000	for segment #1 (1000+00.000 to 1002+14.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1002+14.000	for segment #1 (1000+00.000 to 1002+14.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1002+14.000	for segment #1 (1000+00.000 to 1002+14.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+14.000	1002+28.000	for segment #2 (1002+14.000 to 1002+28.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+14.000	1002+28.000	for segment #2 (1002+14.000 to 1002+28.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+14.000	1002+28.000	for segment #2 (1002+14.000 to 1002+28.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+28.000	1002+43.000	for segment #3 (1002+28.000 to 1002+43.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+28.000	1002+43.000	for segment #3 (1002+28.000 to 1002+43.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+28.000	1002+43.000	for segment #3 (1002+28.000 to 1002+43.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+43.000	1002+58.000	for segment #4 (1002+43.000 to 1002+58.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+43.000	1002+58.000	for segment #4 (1002+43.000 to 1002+58.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+43.000	1002+58.000	for segment #4 (1002+43.000 to 1002+58.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+58.000	1002+72.000	for segment #5 (1002+58.000 to 1002+72.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+58.000	1002+72.000	for segment #5 (1002+58.000 to 1002+72.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+58.000	1002+72.000	for segment #5 (1002+58.000 to 1002+72.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+72.000	1002+87.000	for segment #6 (1002+72.000 to 1002+87.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+72.000	1002+87.000	for segment #6 (1002+72.000 to 1002+87.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+72.000	1002+87.000	for segment #6 (1002+72.000 to 1002+87.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+87.000	1002+94.000	for segment #7 (1002+87.000 to 1002+94.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+87.000	1002+94.000	for segment #7 (1002+87.000 to 1002+94.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+87.000	1002+94.000	for segment #7 (1002+87.000 to 1002+94.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+94.000	1003+15.000	for segment #8 (1002+94.000 to 1003+15.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+94.000	1003+15.000	for segment #8 (1002+94.000 to 1003+15.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+94.000	1003+15.000	for segment #8 (1002+94.000 to 1003+15.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+15.000	1003+56.000	for segment #9 (1003+15.000 to 1003+56.000), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+15.000	1003+56.000	for segment #9 (1003+15.000 to 1003+56.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+15.000	1003+56.000	for segment #9 (1003+15.000 to 1003+56.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+56.000	1003+76.312	for segment #10 (1003+56.000 to 1003+76.312), The ramp type for Ramp Alignment RGPNBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+56.000	1003+76.312	for segment #10 (1003+56.000 to 1003+76.312), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1003+56.000	1003+76.312	for segment #10 (1003+56.000 to 1003+76.312), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1002+14.000	for segment #1 (1000+00.000 to 1002+14.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+14.000	1002+28.000	for segment #2 (1002+14.000 to 1002+28.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+28.000	1002+43.000	for segment #3 (1002+28.000 to 1002+43.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+43.000	1002+58.000	for segment #4 (1002+43.000 to 1002+58.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+58.000	1002+72.000	for segment #5 (1002+58.000 to 1002+72.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+72.000	1002+87.000	for segment #6 (1002+72.000 to 1002+87.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+87.000	1002+94.000	for segment #7 (1002+87.000 to 1002+94.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+94.000	1003+15.000	for segment #8 (1002+94.000 to 1003+15.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1003+15.000	1003+56.000	for segment #9 (1003+15.000 to 1003+56.000), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1003+56.000	1003+76.312	for segment #10 (1003+56.000 to 1003+76.312), traffic volume (18,400 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBX70
Highway Comment: Imported from RGPNBX70.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:27:07 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1004+39.198
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1004+39.198
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

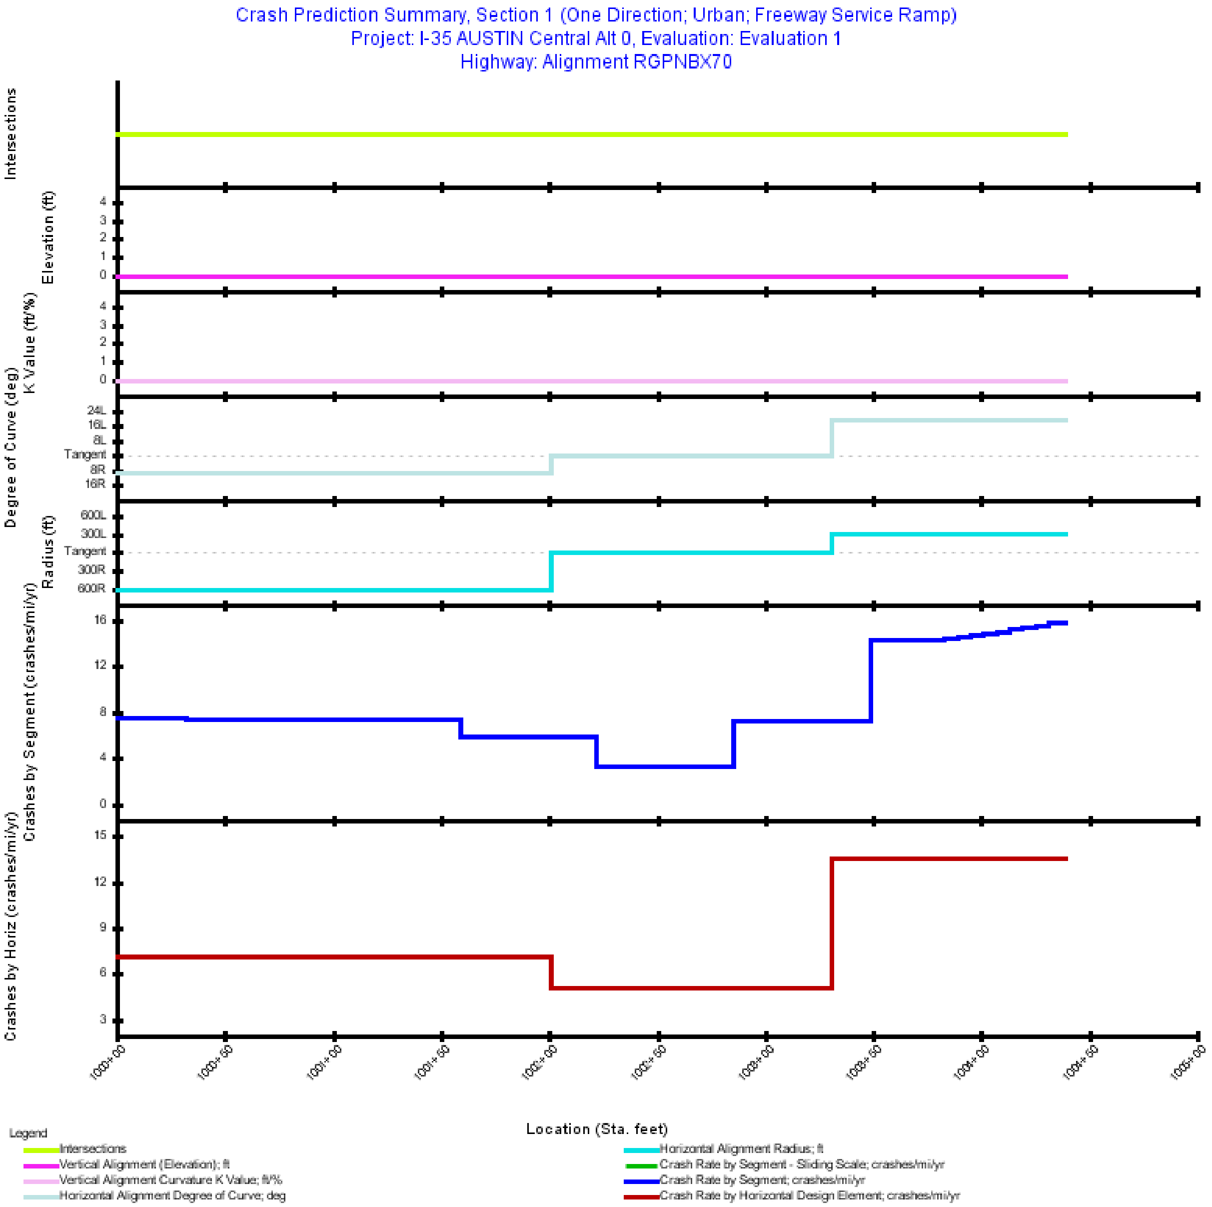

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+32.000	32.00	0.0061	2030: 7,850
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+32.000	1000+95.000	63.00	0.0119	2030: 7,850
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+95.000	1001+59.000	64.00	0.0121	2030: 7,850
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+59.000	1002+22.000	63.00	0.0119	2030: 7,850
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+22.000	1002+85.000	63.00	0.0119	2030: 7,850
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+85.000	1003+49.000	64.00	0.0121	2030: 7,850
7	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+49.000	1003+83.000	34.00	0.0064	2030: 7,850
8	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+83.000	1003+89.000	6.00	0.0011	2030: 7,850
9	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+89.000	1003+95.000	6.00	0.0011	2030: 7,850
10	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+95.000	1004+01.000	6.00	0.0011	2030: 7,850
11	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+01.000	1004+07.000	6.00	0.0011	2030: 7,850
12	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+07.000	1004+13.000	6.00	0.0011	2030: 7,850
13	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+13.000	1004+19.000	6.00	0.0011	2030: 7,850
14	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+19.000	1004+25.000	6.00	0.0011	2030: 7,850
15	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+25.000	1004+31.000	6.00	0.0011	2030: 7,850
16	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+31.000	1004+39.198	8.20	0.0016	2030: 7,850

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.0832**
Average Future Road AADT (vpd)	**7,850**
Predicted Crashes	
Total Crashes	**0.67**
Fatal and Injury Crashes	**0.32**
Property-Damage-Only Crashes	**0.35**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**48**
Percent Property-Damage-Only Crashes (%)	**52**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**8.1060**
FI Crash Rate (crashes/mi/yr)	**3.8698**
PDO Crash Rate (crashes/mi/yr)	**4.2362**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.24**
Travel Crash Rate (crashes/million veh-mi)	**2.83**
Travel FI Crash Rate (crashes/million veh-mi)	**1.35**
Travel PDO Crash Rate (crashes/million veh-mi)	**1.48**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.1	0.01	1.3
Highway Segment	Collision with Fixed Object	0.23	33.6	0.24	35.6	0.47	69.2
Highway Segment	Collision with Other Object	0.02	2.4	0.05	6.9	0.06	9.3
Highway Segment	Other Single-vehicle Collision	0.07	9.7	0.04	5.3	0.10	15.0
Highway Segment	Collision with Parked Vehicle	0.01	0.7	0.01	0.8	0.01	1.5
Highway Segment	Total Single Vehicle Crashes	0.31	46.6	0.34	49.7	0.65	96.3
Highway Segment	Right-Angle Collision	0.00	0.0	0.00	0.0	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.0	0.00	0.1	0.00	0.1
Highway Segment	Rear-end Collision	0.01	0.9	0.01	1.8	0.02	2.6
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.2	0.01	0.7	0.01	0.9
Highway Segment	Total Multiple Vehicle Crashes	0.01	1.2	0.02	2.6	0.03	3.7
Highway Segment	Total Highway Segment Crashes	0.32	47.7	0.35	52.3	0.67	100.0
	Total Crashes	0.32	47.7	0.35	52.3	0.67	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+32.000	for segment #1 (1000+00.000 to 1000+32.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+32.000	for segment #1 (1000+00.000 to 1000+32.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1000+32.000	for segment #1 (1000+00.000 to 1000+32.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+32.000	1000+95.000	for segment #2 (1000+32.000 to 1000+95.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+32.000	1000+95.000	for segment #2 (1000+32.000 to 1000+95.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+32.000	1000+95.000	for segment #2 (1000+32.000 to 1000+95.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+95.000	1001+59.000	for segment #3 (1000+95.000 to 1001+59.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+95.000	1001+59.000	for segment #3 (1000+95.000 to 1001+59.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+95.000	1001+59.000	for segment #3 (1000+95.000 to 1001+59.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+59.000	1002+22.000	for segment #4 (1001+59.000 to 1002+22.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+59.000	1002+22.000	for segment #4 (1001+59.000 to 1002+22.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+59.000	1002+22.000	for segment #4 (1001+59.000 to 1002+22.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+22.000	1002+85.000	for segment #5 (1002+22.000 to 1002+85.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+22.000	1002+85.000	for segment #5 (1002+22.000 to 1002+85.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+22.000	1002+85.000	for segment #5 (1002+22.000 to 1002+85.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+85.000	1003+49.000	for segment #6 (1002+85.000 to 1003+49.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+85.000	1003+49.000	for segment #6 (1002+85.000 to 1003+49.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+85.000	1003+49.000	for segment #6 (1002+85.000 to 1003+49.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+49.000	1003+83.000	for segment #7 (1003+49.000 to 1003+83.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+49.000	1003+83.000	for segment #7 (1003+49.000 to 1003+83.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+49.000	1003+83.000	for segment #7 (1003+49.000 to 1003+83.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+83.000	1003+89.000	for segment #8 (1003+83.000 to 1003+89.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+83.000	1003+89.000	for segment #8 (1003+83.000 to 1003+89.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+83.000	1003+89.000	for segment #8 (1003+83.000 to 1003+89.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+89.000	1003+95.000	for segment #9 (1003+89.000 to 1003+95.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+89.000	1003+95.000	for segment #9 (1003+89.000 to 1003+95.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+89.000	1003+95.000	for segment #9 (1003+89.000 to 1003+95.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+95.000	1004+01.000	for segment #10 (1003+95.000 to 1004+01.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+95.000	1004+01.000	for segment #10 (1003+95.000 to 1004+01.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1003+95.000	1004+01.000	for segment #10 (1003+95.000 to 1004+01.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+01.000	1004+07.000	for segment #11 (1004+01.000 to 1004+07.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+01.000	1004+07.000	for segment #11 (1004+01.000 to 1004+07.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+01.000	1004+07.000	for segment #11 (1004+01.000 to 1004+07.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+07.000	1004+13.000	for segment #12 (1004+07.000 to 1004+13.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+07.000	1004+13.000	for segment #12 (1004+07.000 to 1004+13.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+07.000	1004+13.000	for segment #12 (1004+07.000 to 1004+13.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+13.000	1004+19.000	for segment #13 (1004+13.000 to 1004+19.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+13.000	1004+19.000	for segment #13 (1004+13.000 to 1004+19.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+13.000	1004+19.000	for segment #13 (1004+13.000 to 1004+19.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+19.000	1004+25.000	for segment #14 (1004+19.000 to 1004+25.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+19.000	1004+25.000	for segment #14 (1004+19.000 to 1004+25.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+19.000	1004+25.000	for segment #14 (1004+19.000 to 1004+25.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+25.000	1004+31.000	for segment #15 (1004+25.000 to 1004+31.000), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+25.000	1004+31.000	for segment #15 (1004+25.000 to 1004+31.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+25.000	1004+31.000	for segment #15 (1004+25.000 to 1004+31.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+31.000	1004+39.198	for segment #16 (1004+31.000 to 1004+39.198), The ramp type for Ramp Alignment RGPNBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+31.000	1004+39.198	for segment #16 (1004+31.000 to 1004+39.198), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+31.000	1004+39.198	for segment #16 (1004+31.000 to 1004+39.198), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBNCHZ0
Highway Comment: Imported from RGPNBNCHZ0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:20:53 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1006+80.239
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1006+80.239
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

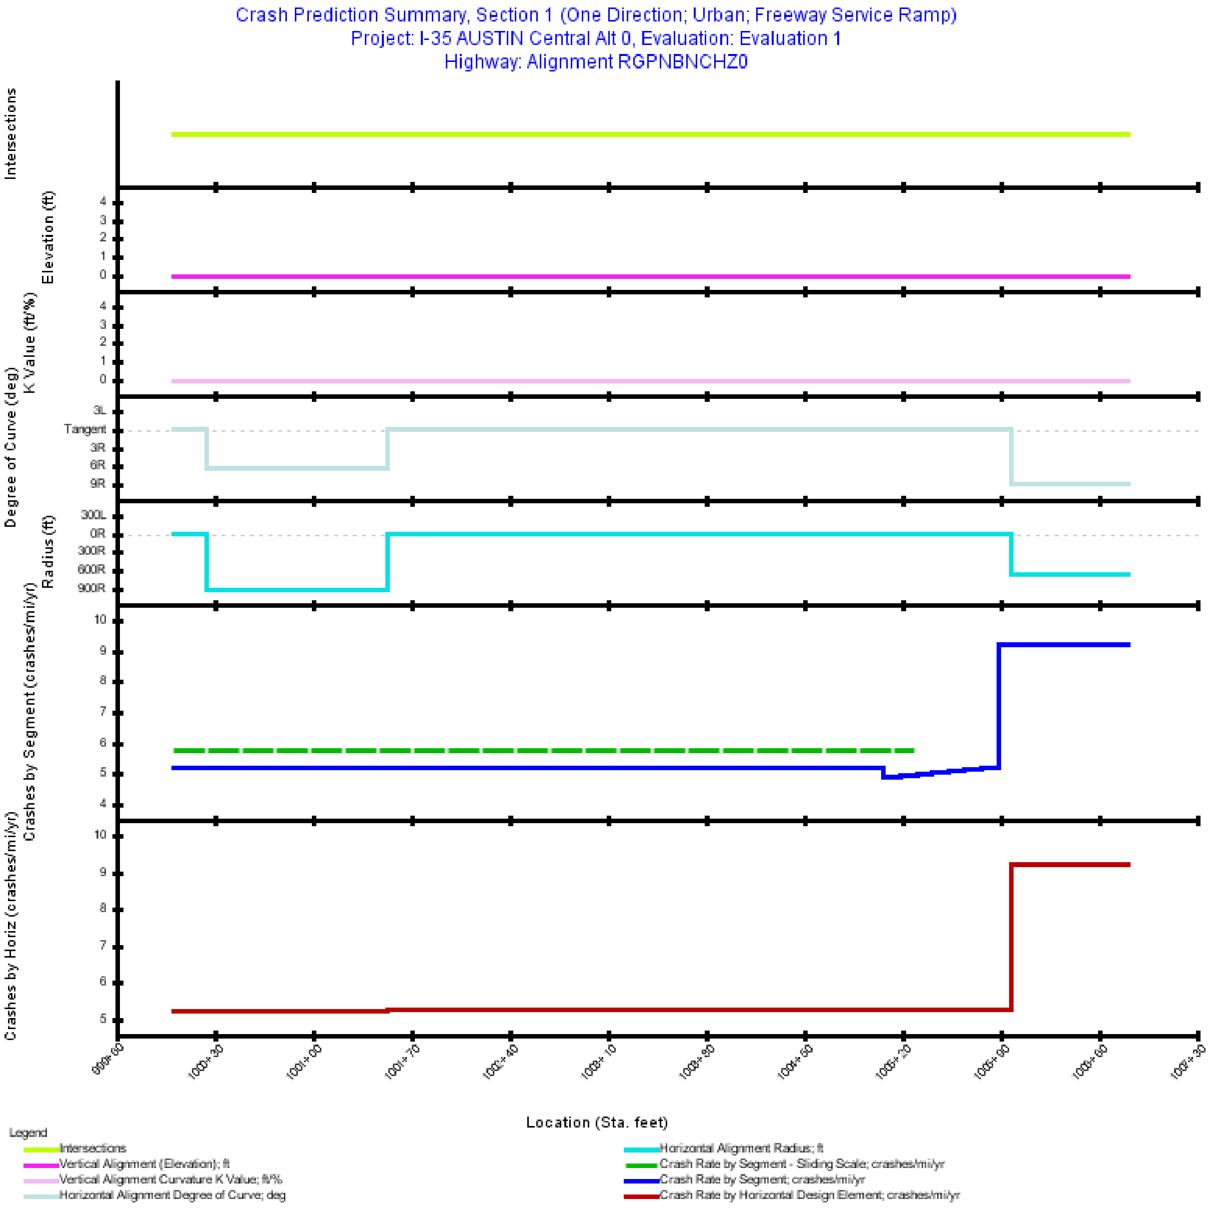

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1005+06.000	506.00	0.0958	2030: 13,300
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1005+06.000	1005+18.000	12.00	0.0023	2030: 13,300
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1005+18.000	1005+30.000	12.00	0.0023	2030: 13,300

Highway Segment	Total Multiple Vehicle Crashes	0.08	10.5	0.12	16.1	0.20	26.6
Highway Segment	Total Highway Segment Crashes	0.34	46.7	0.39	53.3	0.74	100.0
	Total Crashes	0.34	46.7	0.39	53.3	0.74	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1005+06.000	for segment #1 (1000+00.000 to 1005+06.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1005+06.000	for segment #1 (1000+00.000 to 1005+06.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1005+06.000	for segment #1 (1000+00.000 to 1005+06.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+06.000	1005+18.000	for segment #2 (1005+06.000 to 1005+18.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+06.000	1005+18.000	for segment #2 (1005+06.000 to 1005+18.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+06.000	1005+18.000	for segment #2 (1005+06.000 to 1005+18.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+18.000	1005+30.000	for segment #3 (1005+18.000 to 1005+30.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+18.000	1005+30.000	for segment #3 (1005+18.000 to 1005+30.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+18.000	1005+30.000	for segment #3 (1005+18.000 to 1005+30.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+30.000	1005+41.000	for segment #4 (1005+30.000 to 1005+41.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+30.000	1005+41.000	for segment #4 (1005+30.000 to 1005+41.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+30.000	1005+41.000	for segment #4 (1005+30.000 to 1005+41.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+41.000	1005+53.000	for segment #5 (1005+41.000 to 1005+53.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+41.000	1005+53.000	for segment #5 (1005+41.000 to 1005+53.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+41.000	1005+53.000	for segment #5 (1005+41.000 to 1005+53.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+53.000	1005+64.000	for segment #6 (1005+53.000 to 1005+64.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+53.000	1005+64.000	for segment #6 (1005+53.000 to 1005+64.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+53.000	1005+64.000	for segment #6 (1005+53.000 to 1005+64.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+64.000	1005+76.000	for segment #7 (1005+64.000 to 1005+76.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+64.000	1005+76.000	for segment #7 (1005+64.000 to 1005+76.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+64.000	1005+76.000	for segment #7 (1005+64.000 to 1005+76.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+76.000	1005+88.000	for segment #8 (1005+76.000 to 1005+88.000), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+76.000	1005+88.000	for segment #8 (1005+76.000 to 1005+88.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+76.000	1005+88.000	for segment #8 (1005+76.000 to 1005+88.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+88.000	1006+80.239	for segment #9 (1005+88.000 to 1006+80.239), The ramp type for Ramp Alignment RGPNBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+88.000	1006+80.239	for segment #9 (1005+88.000 to 1006+80.239), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+88.000	1006+80.239	for segment #9 (1005+88.000 to 1006+80.239), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1006+20.152
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

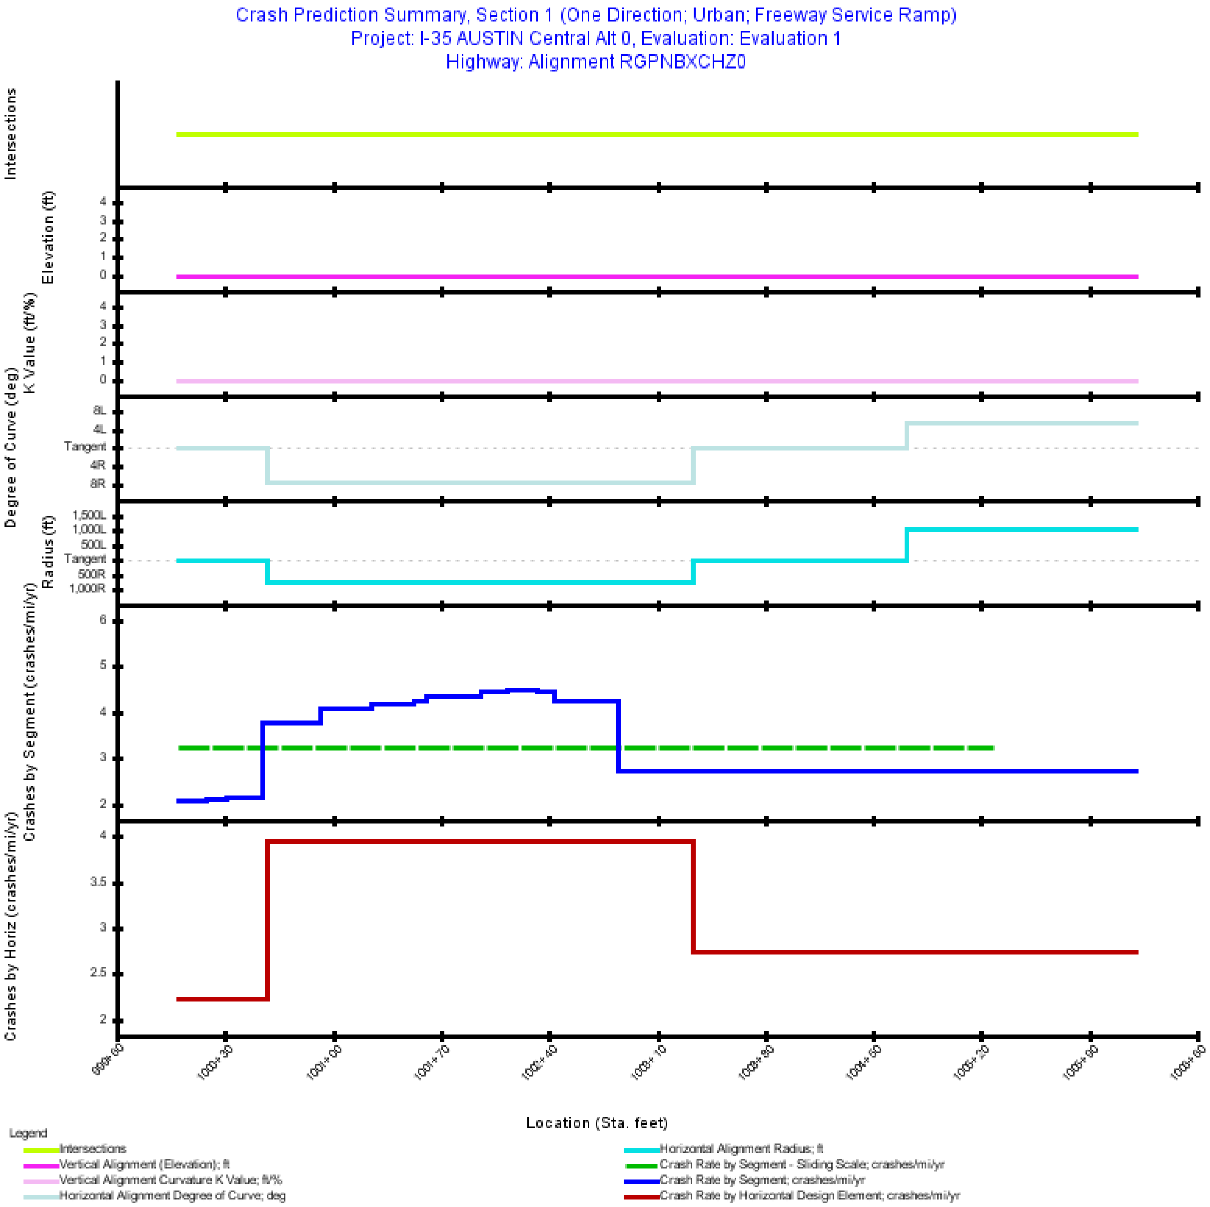

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+18.000	18.00	0.0034	2030: 5,150

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.1175**
Average Future Road AADT (vpd)	**5,150**
Predicted Crashes	
Total Crashes	**0.38**
Fatal and Injury Crashes	**0.19**
Property-Damage-Only Crashes	**0.19**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**49**
Percent Property-Damage-Only Crashes (%)	**51**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**3.2238**
FI Crash Rate (crashes/mi/yr)	**1.5913**
PDO Crash Rate (crashes/mi/yr)	**1.6326**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.22**
Travel Crash Rate (crashes/million veh-mi)	**1.72**
Travel FI Crash Rate (crashes/million veh-mi)	**0.85**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.87**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)
1	1000+00.000	1000+18.000	0.0034	0.007	0.0071	0.0036	0.0035	2.0828	1.11

13	0.0002	0.0005	0.0023	0.0035	0.0071
14	0.0025	0.0075	0.0317	0.0430	0.0885
Total	0.0053	0.0160	0.0679	0.0977	0.1917

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.00	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.13	34.6	0.13	34.1	0.26	68.7
Highway Segment	Collision with Other Object	0.01	2.4	0.03	6.6	0.03	9.1
Highway Segment	Other Single-vehicle Collision	0.04	10.0	0.02	5.1	0.06	15.1
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.8	0.01	1.5
Highway Segment	Total Single Vehicle Crashes	0.18	47.9	0.18	47.6	0.36	95.5
Highway Segment	Right-Angle Collision	0.00	0.0	0.00	0.1	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.0	0.00	0.1	0.00	0.1
Highway Segment	Rear-end Collision	0.00	1.1	0.01	2.1	0.01	3.2
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.3	0.00	0.8	0.00	1.1
Highway Segment	Total Multiple Vehicle Crashes	0.01	1.4	0.01	3.0	0.02	4.5
Highway Segment	Total Highway Segment Crashes	0.19	49.4	0.19	50.6	0.38	100.0
	Total Crashes	0.19	49.4	0.19	50.6	0.38	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+18.000	for segment #1 (1000+00.000 to 1000+18.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+18.000	for segment #1 (1000+00.000 to 1000+18.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+18.000	1000+31.000	for segment #2 (1000+18.000 to 1000+31.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+18.000	1000+31.000	for segment #2 (1000+18.000 to 1000+31.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+31.000	1000+54.000	for segment #3 (1000+31.000 to 1000+54.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+31.000	1000+54.000	for segment #3 (1000+31.000 to 1000+54.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+54.000	1000+92.000	for segment #4 (1000+54.000 to 1000+92.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+54.000	1000+92.000	for segment #4 (1000+54.000 to 1000+92.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+92.000	1001+25.000	for segment #5 (1000+92.000 to 1001+25.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+92.000	1001+25.000	for segment #5 (1000+92.000 to 1001+25.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+25.000	1001+52.000	for segment #6 (1001+25.000 to 1001+52.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+25.000	1001+52.000	for segment #6 (1001+25.000 to 1001+52.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+52.000	1001+61.000	for segment #7 (1001+52.000 to 1001+61.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+52.000	1001+61.000	for segment #7 (1001+52.000 to 1001+61.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+61.000	1001+96.000	for segment #8 (1001+61.000 to 1001+96.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+61.000	1001+96.000	for segment #8 (1001+61.000 to 1001+96.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+96.000	1002+13.000	for segment #9 (1001+96.000 to 1002+13.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+96.000	1002+13.000	for segment #9 (1001+96.000 to 1002+13.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+13.000	1002+32.000	for segment #10 (1002+13.000 to 1002+32.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+13.000	1002+32.000	for segment #10 (1002+13.000 to 1002+32.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+13.000	1002+32.000	for segment #10 (1002+13.000 to 1002+32.000), Right shoulder width (1.75 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+32.000	1002+43.000	for segment #11 (1002+32.000 to 1002+43.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+32.000	1002+43.000	for segment #11 (1002+32.000 to 1002+43.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+32.000	1002+43.000	for segment #11 (1002+32.000 to 1002+43.000), Right shoulder width (1.33 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+43.000	1002+68.000	for segment #12 (1002+43.000 to 1002+68.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+43.000	1002+68.000	for segment #12 (1002+43.000 to 1002+68.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+43.000	1002+68.000	for segment #12 (1002+43.000 to 1002+68.000), Right shoulder width (0.83 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1002+68.000	1002+85.000	for segment #13 (1002+68.000 to 1002+85.000), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+68.000	1002+85.000	for segment #13 (1002+68.000 to 1002+85.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+68.000	1002+85.000	for segment #13 (1002+68.000 to 1002+85.000), Right shoulder width (0.24 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+85.000	1006+20.152	for segment #14 (1002+85.000 to 1006+20.152), The ramp type for Ramp Alignment RGPNBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+85.000	1006+20.152	for segment #14 (1002+85.000 to 1006+20.152), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+85.000	1006+20.152	for segment #14 (1002+85.000 to 1006+20.152), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Highway Title: Alignment RGPNBNRVS0
Highway Comment: Imported from RGPNBNRVS0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:22:57 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1003+51.925
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1003+51.925
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

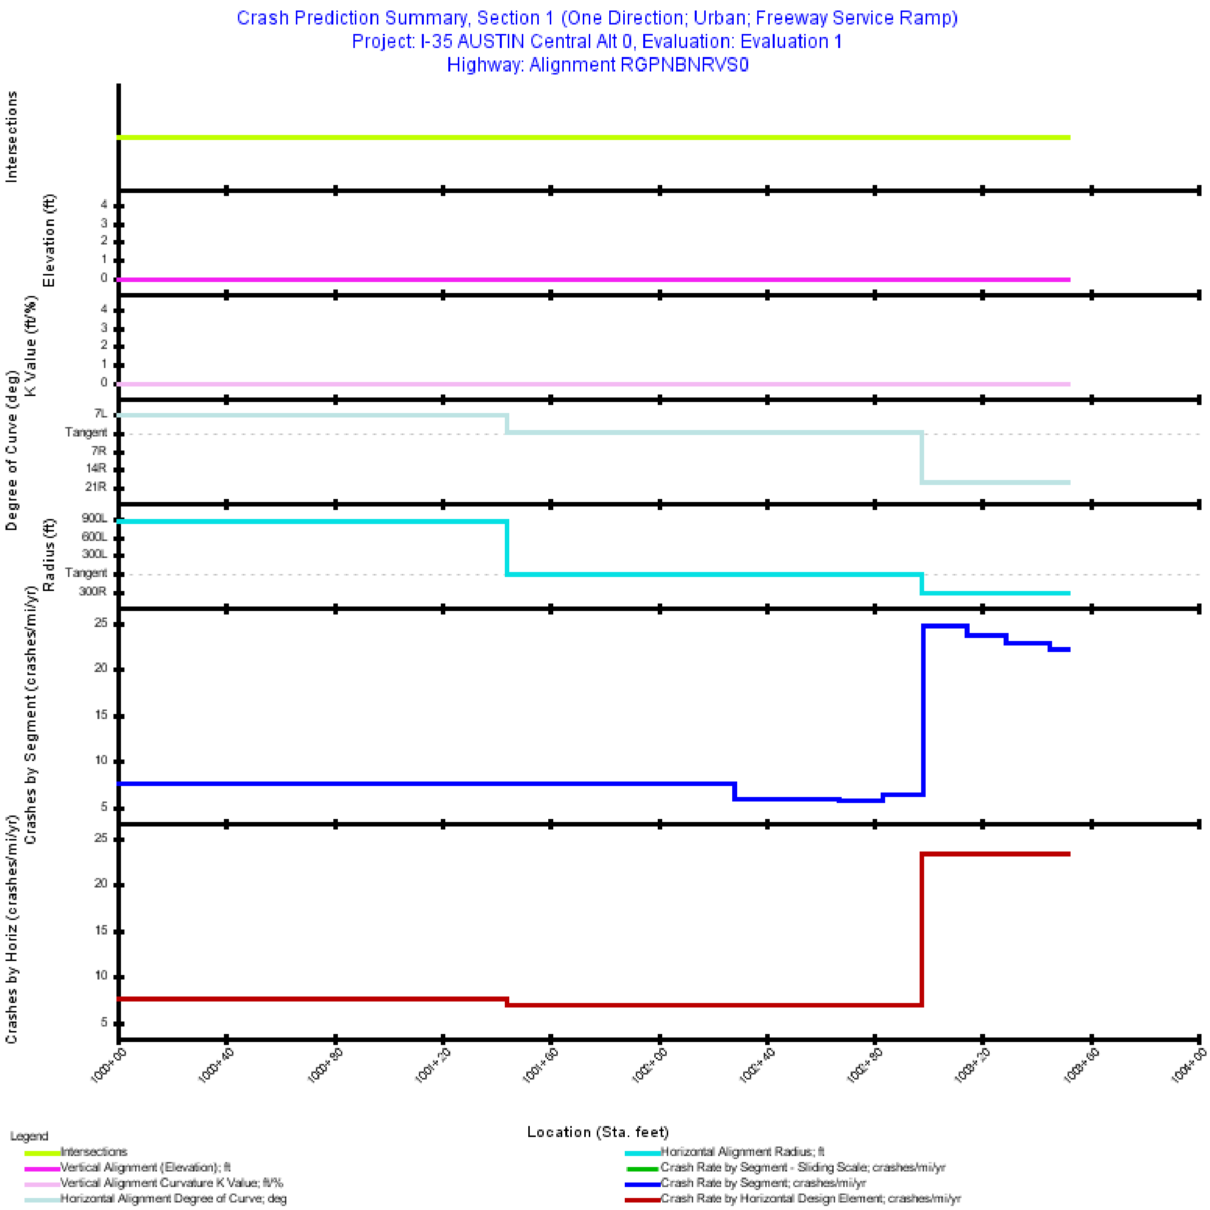

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1002+28.000	228.00	0.0432	2030: 21,050
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+28.000	1002+36.000	8.00	0.0015	2030: 21,050
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+36.000	1002+52.000	16.00	0.0030	2030: 21,050
4	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+52.000	1002+67.000	15.00	0.0028	2030: 21,050
5	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+67.000	1002+83.000	16.00	0.0030	2030: 21,050

Total	0.0065	0.0196	0.1246	0.1521	0.3473

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.1	0.01	0.8	0.01	1.0
Highway Segment	Collision with Fixed Object	0.16	24.7	0.18	27.6	0.34	52.3
Highway Segment	Collision with Other Object	0.01	1.7	0.04	5.4	0.05	7.1
Highway Segment	Other Single-vehicle Collision	0.05	7.1	0.03	4.1	0.07	11.2
Highway Segment	Collision with Parked Vehicle	0.00	0.5	0.00	0.6	0.01	1.1
Highway Segment	Total Single Vehicle Crashes	0.22	34.2	0.25	38.5	0.47	72.7
Highway Segment	Right-Angle Collision	0.00	0.4	0.00	0.3	0.00	0.7
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.4	0.00	0.4	0.01	0.7
Highway Segment	Rear-end Collision	0.06	9.3	0.07	10.3	0.13	19.6
Highway Segment	Sideswipe, Same Direction Collision	0.01	2.2	0.03	4.0	0.04	6.2
Highway Segment	Total Multiple Vehicle Crashes	0.08	12.4	0.10	14.9	0.18	27.3
Highway Segment	Total Highway Segment Crashes	0.30	46.6	0.35	53.4	0.65	100.0
	Total Crashes	0.30	46.6	0.35	53.4	0.65	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1002+28.000	for segment #1 (1000+00.000 to 1002+28.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1002+28.000	for segment #1 (1000+00.000 to 1002+28.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1002+28.000	for segment #1 (1000+00.000 to 1002+28.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+28.000	1002+36.000	for segment #2 (1002+28.000 to 1002+36.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+28.000	1002+36.000	for segment #2 (1002+28.000 to 1002+36.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+28.000	1002+36.000	for segment #2 (1002+28.000 to 1002+36.000), Right shoulder width (0.26 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+36.000	1002+52.000	for segment #3 (1002+36.000 to 1002+52.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+36.000	1002+52.000	for segment #3 (1002+36.000 to 1002+52.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+36.000	1002+52.000	for segment #3 (1002+36.000 to 1002+52.000), Right shoulder width (1.03 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+52.000	1002+67.000	for segment #4 (1002+52.000 to 1002+67.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+52.000	1002+67.000	for segment #4 (1002+52.000 to 1002+67.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+67.000	1002+83.000	for segment #5 (1002+67.000 to 1002+83.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+67.000	1002+83.000	for segment #5 (1002+67.000 to 1002+83.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+83.000	1002+98.000	for segment #6 (1002+83.000 to 1002+98.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+83.000	1002+98.000	for segment #6 (1002+83.000 to 1002+98.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+98.000	1003+14.000	for segment #7 (1002+98.000 to 1003+14.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+98.000	1003+14.000	for segment #7 (1002+98.000 to 1003+14.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+14.000	1003+29.000	for segment #8 (1003+14.000 to 1003+29.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+14.000	1003+29.000	for segment #8 (1003+14.000 to 1003+29.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+29.000	1003+45.000	for segment #9 (1003+29.000 to 1003+45.000), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+29.000	1003+45.000	for segment #9 (1003+29.000 to 1003+45.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+45.000	1003+51.925	for segment #10 (1003+45.000 to 1003+51.925), The ramp type for Ramp Alignment RGPNBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+45.000	1003+51.925	for segment #10 (1003+45.000 to 1003+51.925), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1002+28.000	for segment #1 (1000+00.000 to 1002+28.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+28.000	1002+36.000	for segment #2 (1002+28.000 to 1002+36.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+36.000	1002+52.000	for segment #3 (1002+36.000 to 1002+52.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+52.000	1002+67.000	for segment #4 (1002+52.000 to 1002+67.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+67.000	1002+83.000	for segment #5 (1002+67.000 to 1002+83.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1002+83.000	1002+98.000	for segment #6 (1002+83.000 to 1002+98.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1002+98.000	1003+14.000	for segment #7 (1002+98.000 to 1003+14.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

1003+29.000	1003+45.000	for segment #9 (1003+29.000 to 1003+45.000), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1003+45.000	1003+51.925	for segment #10 (1003+45.000 to 1003+51.925), traffic volume (21,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Highway Segment	Total Highway Segment Crashes	0.10	47.7	0.11	52.3	0.21	100.0
	Total Crashes	0.10	47.7	0.11	52.3	0.21	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+15.000	for segment #1 (1000+00.000 to 1000+15.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+15.000	1000+45.000	for segment #2 (1000+15.000 to 1000+45.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+45.000	1000+75.000	for segment #3 (1000+45.000 to 1000+75.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+75.000	1001+05.000	for segment #4 (1000+75.000 to 1001+05.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+05.000	1001+19.000	for segment #5 (1001+05.000 to 1001+19.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+19.000	1001+88.000	for segment #6 (1001+19.000 to 1001+88.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+88.000	1001+93.000	for segment #7 (1001+88.000 to 1001+93.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+93.000	1002+01.000	for segment #8 (1001+93.000 to 1002+01.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+01.000	1002+09.000	for segment #9 (1002+01.000 to 1002+09.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+09.000	1002+17.000	for segment #10 (1002+09.000 to 1002+17.000), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+17.000	1003+18.866	for segment #11 (1002+17.000 to 1003+18.866), The ramp type for Ramp Alignment RGPNBXHLY0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.1177**
Average Future Road AADT (vpd)	**10,800**
Predicted Crashes	
Total Crashes	**0.52**
Fatal and Injury Crashes	**0.25**
Property-Damage-Only Crashes	**0.28**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**48**
Percent Property-Damage-Only Crashes (%)	**52**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**4.4544**
FI Crash Rate (crashes/mi/yr)	**2.1229**
PDO Crash Rate (crashes/mi/yr)	**2.3316**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.46**
Travel Crash Rate (crashes/million veh-mi)	**1.13**
Travel FI Crash Rate (crashes/million veh-mi)	**0.54**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.59**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)
1	1000+00.000	1000+24.000	0.0045	0.013	0.0128	0.0059	0.0069	2.8114	0.71

Total	0.0069	0.0208	0.0886	0.1337	0.2745

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.17	33.1	0.18	34.0	0.35	67.1
Highway Segment	Collision with Other Object	0.01	2.3	0.04	6.6	0.05	8.9
Highway Segment	Other Single-vehicle Collision	0.05	9.5	0.03	5.1	0.08	14.6
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.8	0.01	1.4
Highway Segment	Total Single Vehicle Crashes	0.24	45.8	0.25	47.5	0.49	93.3
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.01	1.4	0.02	3.4	0.03	4.7
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.3	0.01	1.3	0.01	1.6
Highway Segment	Total Multiple Vehicle Crashes	0.01	1.8	0.03	4.9	0.04	6.7
Highway Segment	Total Highway Segment Crashes	0.25	47.7	0.28	52.3	0.52	100.0
	Total Crashes	0.25	47.7	0.28	52.3	0.52	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+24.000	for segment #1 (1000+00.000 to 1000+24.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+24.000	for segment #1 (1000+00.000 to 1000+24.000), Right shoulder width (13.75 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
1000+24.000	1000+34.000	for segment #2 (1000+24.000 to 1000+34.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+24.000	1000+34.000	for segment #2 (1000+24.000 to 1000+34.000), Right shoulder width (13.39 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
1000+34.000	1000+72.000	for segment #3 (1000+34.000 to 1000+72.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+34.000	1000+72.000	for segment #3 (1000+34.000 to 1000+72.000), Right shoulder width (12.88 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
1000+72.000	1001+02.000	for segment #4 (1000+72.000 to 1001+02.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+72.000	1001+02.000	for segment #4 (1000+72.000 to 1001+02.000), Right shoulder width (12.16 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
1001+02.000	1001+19.000	for segment #5 (1001+02.000 to 1001+19.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+19.000	1001+69.000	for segment #6 (1001+19.000 to 1001+69.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+69.000	1002+14.000	for segment #7 (1001+69.000 to 1002+14.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+14.000	1002+37.000	for segment #8 (1002+14.000 to 1002+37.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+37.000	1002+61.000	for segment #9 (1002+37.000 to 1002+61.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+61.000	1003+08.000	for segment #10 (1002+61.000 to 1003+08.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+08.000	1003+56.000	for segment #11 (1003+08.000 to 1003+56.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+56.000	1003+79.000	for segment #12 (1003+56.000 to 1003+79.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+79.000	1004+02.000	for segment #13 (1003+79.000 to 1004+02.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+02.000	1004+10.000	for segment #14 (1004+02.000 to 1004+10.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+10.000	1004+48.000	for segment #15 (1004+10.000 to 1004+48.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+48.000	1004+71.000	for segment #16 (1004+48.000 to 1004+71.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+71.000	1004+95.000	for segment #17 (1004+71.000 to 1004+95.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+71.000	1004+95.000	for segment #17 (1004+71.000 to 1004+95.000), Left shoulder width (1.74 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+95.000	1005+31.000	for segment #18 (1004+95.000 to 1005+31.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+95.000	1005+31.000	for segment #18 (1004+95.000 to 1005+31.000), Left shoulder width (1.10 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1005+31.000	1005+41.000	for segment #19 (1005+31.000 to 1005+41.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+31.000	1005+41.000	for segment #19 (1005+31.000 to 1005+41.000), Left shoulder width (0.60 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+41.000	1005+64.000	for segment #20 (1005+41.000 to 1005+64.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+41.000	1005+64.000	for segment #20 (1005+41.000 to 1005+64.000), Left shoulder width (0.25 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+64.000	1005+92.000	for segment #21 (1005+64.000 to 1005+92.000), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+64.000	1005+92.000	for segment #21 (1005+64.000 to 1005+92.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+92.000	1006+21.668	for segment #22 (1005+92.000 to 1006+21.668), The ramp type for Ramp Alignment RGPNBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+92.000	1006+21.668	for segment #22 (1005+92.000 to 1006+21.668), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.1186**
Average Future Road AADT (vpd)	**9,650**
Predicted Crashes	
Total Crashes	**0.52**
Fatal and Injury Crashes	**0.26**
Property-Damage-Only Crashes	**0.26**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**50**
Percent Property-Damage-Only Crashes (%)	**50**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**4.4052**
FI Crash Rate (crashes/mi/yr)	**2.1834**
PDO Crash Rate (crashes/mi/yr)	**2.2219**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.42**
Travel Crash Rate (crashes/million veh-mi)	**1.25**
Travel FI Crash Rate (crashes/million veh-mi)	**0.62**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.63**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)
1	1000+00.000	1000+27.000	0.0051	0.011	0.0109	0.0051	0.0058	2.1363	0.61

Total	0.0081	0.0245	0.1019	0.1243	0.2634

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.18	34.6	0.17	33.3	0.35	67.9
Highway Segment	Collision with Other Object	0.01	2.4	0.03	6.5	0.05	8.9
Highway Segment	Other Single-vehicle Collision	0.05	10.0	0.03	5.0	0.08	14.9
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.7	0.01	1.5
Highway Segment	Total Single Vehicle Crashes	0.25	47.9	0.24	46.5	0.49	94.4
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.1
Highway Segment	Rear-end Collision	0.01	1.3	0.01	2.7	0.02	4.0
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.3	0.01	1.1	0.01	1.4
Highway Segment	Total Multiple Vehicle Crashes	0.01	1.7	0.02	4.0	0.03	5.6
Highway Segment	Total Highway Segment Crashes	0.26	49.6	0.26	50.4	0.52	100.0
	Total Crashes	0.26	49.6	0.26	50.4	0.52	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+27.000	for segment #1 (1000+00.000 to 1000+27.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+27.000	for segment #1 (1000+00.000 to 1000+27.000), Right shoulder width (22.00 feet) is greater than specified boundaries (12.00 feet); adjusted in CMF calculations.
1000+27.000	1000+33.000	for segment #2 (1000+27.000 to 1000+33.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+33.000	1000+98.000	for segment #3 (1000+33.000 to 1000+98.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+98.000	1001+11.000	for segment #4 (1000+98.000 to 1001+11.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+11.000	1001+31.000	for segment #5 (1001+11.000 to 1001+31.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+31.000	1001+51.000	for segment #6 (1001+31.000 to 1001+51.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+51.000	1001+63.000	for segment #7 (1001+51.000 to 1001+63.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+63.000	1001+71.000	for segment #8 (1001+63.000 to 1001+71.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+71.000	1001+91.000	for segment #9 (1001+71.000 to 1001+91.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+91.000	1002+11.000	for segment #10 (1001+91.000 to 1002+11.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+11.000	1002+31.000	for segment #11 (1002+11.000 to 1002+31.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+31.000	1002+51.000	for segment #12 (1002+31.000 to 1002+51.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+51.000	1004+55.000	for segment #13 (1002+51.000 to 1004+55.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+55.000	1005+04.000	for segment #14 (1004+55.000 to 1005+04.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+04.000	1005+53.000	for segment #15 (1005+04.000 to 1005+53.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+53.000	1006+02.000	for segment #16 (1005+53.000 to 1006+02.000), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+02.000	1006+25.967	for segment #17 (1006+02.000 to 1006+25.967), The ramp type for Ramp Alignment RGPNBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPNBNWODW0
Highway Comment: Imported from RGPNBNWODW0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:23:38 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1023+34.056
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

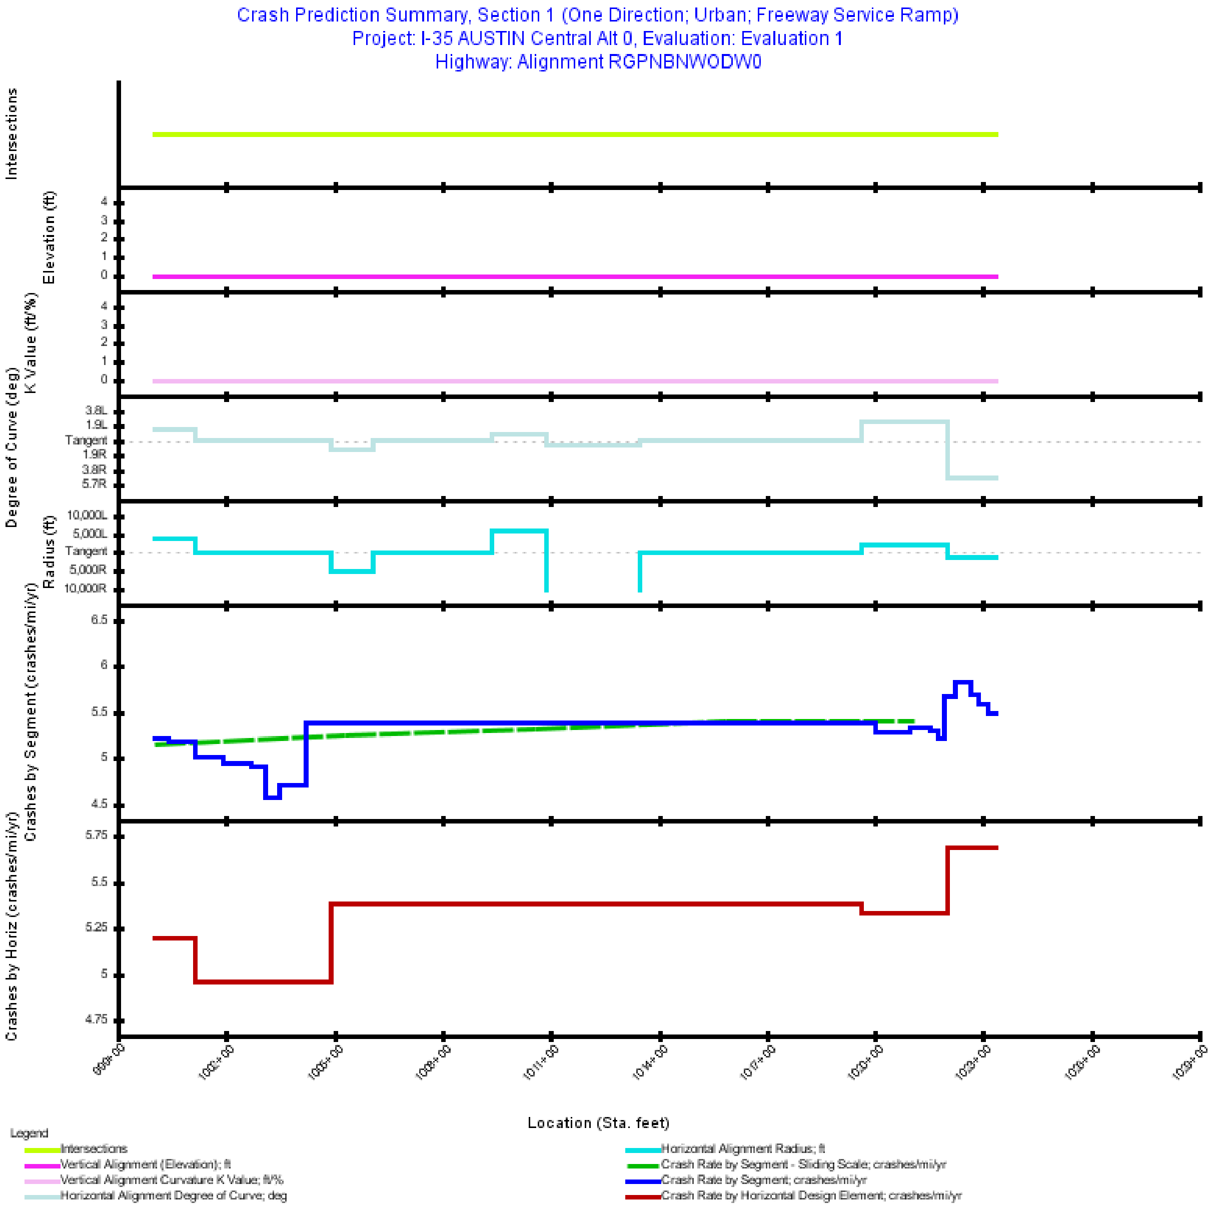
Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1023+34.056
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;



Crash Prediction Summary, Section 1 (One Direction; Urban; Freeway Service Ramp)
Project: I-35 AUSTIN Central Alt 0, Evaluation: Evaluation 1
Highway: Alignment RGPNBNWODW0

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+39.000	39.00	0.0074	2030: 14,100
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+39.000	1001+16.000	77.00	0.0146	2030: 14,100

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.4421**
Average Future Road AADT (vpd)	**14,100**
Predicted Crashes	
Total Crashes	**2.35**
Fatal and Injury Crashes	**1.11**
Property-Damage-Only Crashes	**1.24**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**47**
Percent Property-Damage-Only Crashes (%)	**53**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**5.3185**
FI Crash Rate (crashes/mi/yr)	**2.5033**
PDO Crash Rate (crashes/mi/yr)	**2.8151**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**2.27**
Travel Crash Rate (crashes/million veh-mi)	**1.03**
Travel FI Crash Rate (crashes/million veh-mi)	**0.49**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.55**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)
1	1000+00.000	1000+39.000	0.0074	0.039	0.0386	0.0189	0.0197	5.2232	1.01

11	0.0002	0.0006	0.0041	0.0062	0.0121
12	0.0001	0.0004	0.0028	0.0042	0.0083
13	0.0003	0.0008	0.0054	0.0082	0.0165
14	0.0004	0.0013	0.0087	0.0132	0.0271
15	0.0002	0.0006	0.0037	0.0056	0.0116
16	0.0002	0.0007	0.0045	0.0068	0.0143
17	0.0002	0.0006	0.0039	0.0059	0.0124
Total	0.0199	0.0604	0.3963	0.6300	1.2444

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.1	0.02	0.8	0.02	0.9
Highway Segment	Collision with Fixed Object	0.60	25.4	0.58	24.7	1.18	50.1
Highway Segment	Collision with Other Object	0.04	1.8	0.11	4.8	0.15	6.6
Highway Segment	Other Single-vehicle Collision	0.17	7.3	0.09	3.7	0.26	11.0
Highway Segment	Collision with Parked Vehicle	0.01	0.5	0.01	0.6	0.03	1.1
Highway Segment	Total Single Vehicle Crashes	0.83	35.2	0.81	34.5	1.64	69.7
Highway Segment	Right-Angle Collision	0.01	0.4	0.01	0.3	0.02	0.7
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.01	0.4	0.01	0.4	0.02	0.8
Highway Segment	Rear-end Collision	0.21	8.9	0.30	12.7	0.51	21.6
Highway Segment	Sideswipe, Same Direction Collision	0.05	2.1	0.12	4.9	0.17	7.0
Highway Segment	Total Multiple Vehicle Crashes	0.28	11.9	0.43	18.4	0.71	30.3
Highway Segment	Total Highway Segment Crashes	1.11	47.1	1.24	52.9	2.35	100.0
	Total Crashes	1.11	47.1	1.24	52.9	2.35	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+39.000	for segment #1 (1000+00.000 to 1000+39.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1000+39.000	for segment #1 (1000+00.000 to 1000+39.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+39.000	1001+16.000	for segment #2 (1000+39.000 to 1001+16.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+39.000	1001+16.000	for segment #2 (1000+39.000 to 1001+16.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+16.000	1001+94.000	for segment #3 (1001+16.000 to 1001+94.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+16.000	1001+94.000	for segment #3 (1001+16.000 to 1001+94.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+94.000	1002+71.000	for segment #4 (1001+94.000 to 1002+71.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+94.000	1002+71.000	for segment #4 (1001+94.000 to 1002+71.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+71.000	1003+08.000	for segment #5 (1002+71.000 to 1003+08.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+71.000	1003+08.000	for segment #5 (1002+71.000 to 1003+08.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+08.000	1003+46.000	for segment #6 (1003+08.000 to 1003+46.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+46.000	1004+22.000	for segment #7 (1003+46.000 to 1004+22.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+22.000	1020+02.000	for segment #8 (1004+22.000 to 1020+02.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1020+02.000	1020+97.000	for segment #9 (1020+02.000 to 1020+97.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1020+97.000	1021+53.000	for segment #10 (1020+97.000 to 1021+53.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1021+53.000	1021+76.000	for segment #11 (1021+53.000 to 1021+76.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1021+76.000	1021+92.000	for segment #12 (1021+76.000 to 1021+92.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1021+92.000	1022+21.000	for segment #13 (1021+92.000 to 1022+21.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1022+21.000	1022+67.000	for segment #14 (1022+21.000 to 1022+67.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1022+67.000	1022+87.000	for segment #15 (1022+67.000 to 1022+87.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1022+87.000	1023+12.000	for segment #16 (1022+87.000 to 1023+12.000), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1023+12.000	1023+34.056	for segment #17 (1023+12.000 to 1023+34.056), The ramp type for Ramp Alignment RGPNBNWODW0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1008+27.000	for segment #1 (1000+00.000 to 1008+27.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1008+27.000	1009+13.000	for segment #2 (1008+27.000 to 1009+13.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1009+13.000	1009+23.000	for segment #3 (1009+13.000 to 1009+23.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1009+23.000	1010+82.000	for segment #4 (1009+23.000 to 1010+82.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+82.000	1011+13.000	for segment #5 (1010+82.000 to 1011+13.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1011+13.000	1013+03.000	for segment #6 (1011+13.000 to 1013+03.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1013+03.000	1014+19.000	for segment #7 (1013+03.000 to 1014+19.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1014+19.000	1014+93.000	for segment #8 (1014+19.000 to 1014+93.000), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1014+93.000	1015+87.612	for segment #9 (1014+93.000 to 1015+87.612), The ramp type for Ramp Alignment RGPNBN710 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1008+27.000	1009+13.000	for segment #2 (1008+27.000 to 1009+13.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1009+13.000	1009+23.000	for segment #3 (1009+13.000 to 1009+23.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1009+23.000	1010+82.000	for segment #4 (1009+23.000 to 1010+82.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1010+82.000	1011+13.000	for segment #5 (1010+82.000 to 1011+13.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1011+13.000	1013+03.000	for segment #6 (1011+13.000 to 1013+03.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1013+03.000	1014+19.000	for segment #7 (1013+03.000 to 1014+19.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1014+19.000	1014+93.000	for segment #8 (1014+19.000 to 1014+93.000), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1014+93.000	1015+87.612	for segment #9 (1014+93.000 to 1015+87.612), traffic volume (21,000 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBN2900
Highway Comment: Imported from RGPSBN2900.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:32:37 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1015+34.407
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1015+34.407
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

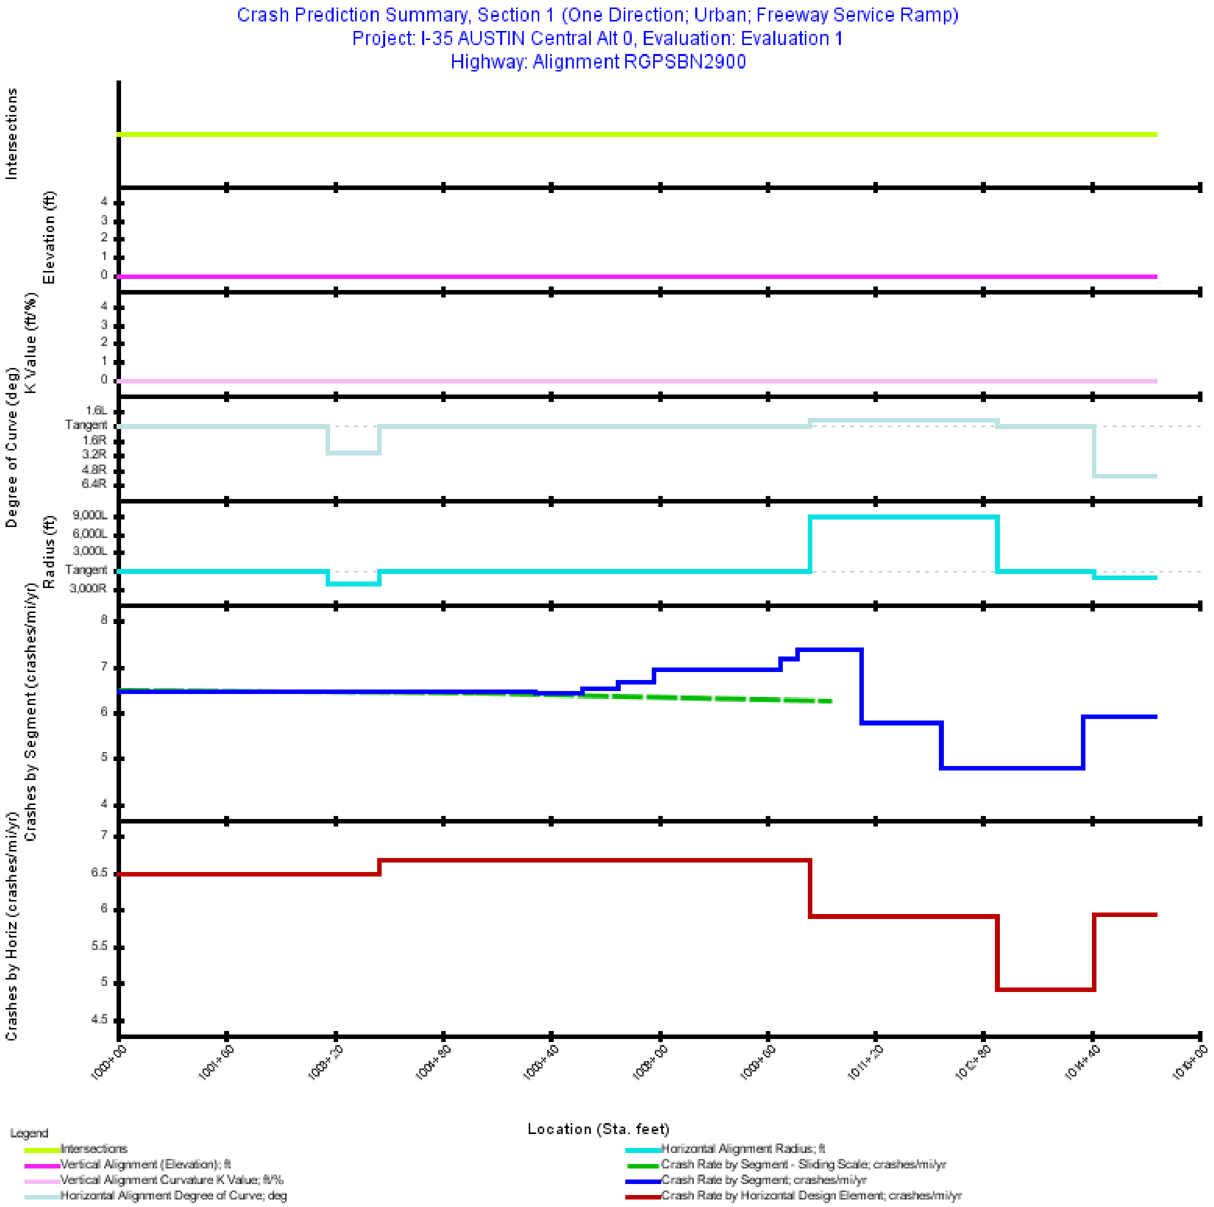

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1006+18.000	618.00	0.1170	2030: 18,050
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1006+18.000	1006+87.000	69.00	0.0131	2030: 18,050
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1006+87.000	1007+39.000	52.00	0.0098	2030: 18,050
4	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1007+39.000	1007+93.000	54.00	0.0102	2030: 18,050
5	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1007+93.000	1009+80.000	187.00	0.0354	2030: 18,050
6	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1009+80.000	1010+05.000	25.00	0.0047	2030: 18,050
7	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1010+05.000	1011+00.000	95.00	0.0180	2030: 18,050
8	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1011+00.000	1012+17.000	117.00	0.0222	2030: 18,050
9	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1012+17.000	1014+29.000	212.00	0.0402	2030: 18,050

Highway Segment	Collision with Parked Vehicle	0.01	0.5	0.01	0.5	0.02	1.0
Highway Segment	Total Single Vehicle Crashes	0.57	31.4	0.62	34.2	1.20	65.6
Highway Segment	Right-Angle Collision	0.01	0.4	0.01	0.4	0.01	0.8
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.01	0.4	0.01	0.5	0.02	0.9
Highway Segment	Rear-end Collision	0.18	10.0	0.27	14.5	0.45	24.5
Highway Segment	Sideswipe, Same Direction Collision	0.04	2.4	0.10	5.6	0.15	8.0
Highway Segment	Total Multiple Vehicle Crashes	0.24	13.4	0.38	21.0	0.63	34.4
Highway Segment	Total Highway Segment Crashes	0.82	44.8	1.01	55.2	1.82	100.0
	Total Crashes	0.82	44.8	1.01	55.2	1.82	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1006+18.000	for segment #1 (1000+00.000 to 1006+18.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1006+18.000	1006+87.000	for segment #2 (1006+18.000 to 1006+87.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1006+87.000	1007+39.000	for segment #3 (1006+87.000 to 1007+39.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1007+39.000	1007+93.000	for segment #4 (1007+39.000 to 1007+93.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1007+93.000	1009+80.000	for segment #5 (1007+93.000 to 1009+80.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1009+80.000	1010+05.000	for segment #6 (1009+80.000 to 1010+05.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+05.000	1011+00.000	for segment #7 (1010+05.000 to 1011+00.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1011+00.000	1012+17.000	for segment #8 (1011+00.000 to 1012+17.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1012+17.000	1014+29.000	for segment #9 (1012+17.000 to 1014+29.000), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1014+29.000	1015+34.407	for segment #10 (1014+29.000 to 1015+34.407), The ramp type for Ramp Alignment RGPSBN2900 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1006+18.000	for segment #1 (1000+00.000 to 1006+18.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1006+18.000	1006+87.000	for segment #2 (1006+18.000 to 1006+87.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1006+87.000	1007+39.000	for segment #3 (1006+87.000 to 1007+39.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1007+39.000	1007+93.000	for segment #4 (1007+39.000 to 1007+93.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1007+93.000	1009+80.000	for segment #5 (1007+93.000 to 1009+80.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1009+80.000	1010+05.000	for segment #6 (1009+80.000 to 1010+05.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1010+05.000	1011+00.000	for segment #7 (1010+05.000 to 1011+00.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1011+00.000	1012+17.000	for segment #8 (1011+00.000 to 1012+17.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1012+17.000	1014+29.000	for segment #9 (1012+17.000 to 1014+29.000), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN
1014+29.000	1015+34.407	for segment #10 (1014+29.000 to 1015+34.407), traffic volume (18,050 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EN

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1002+59.867
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

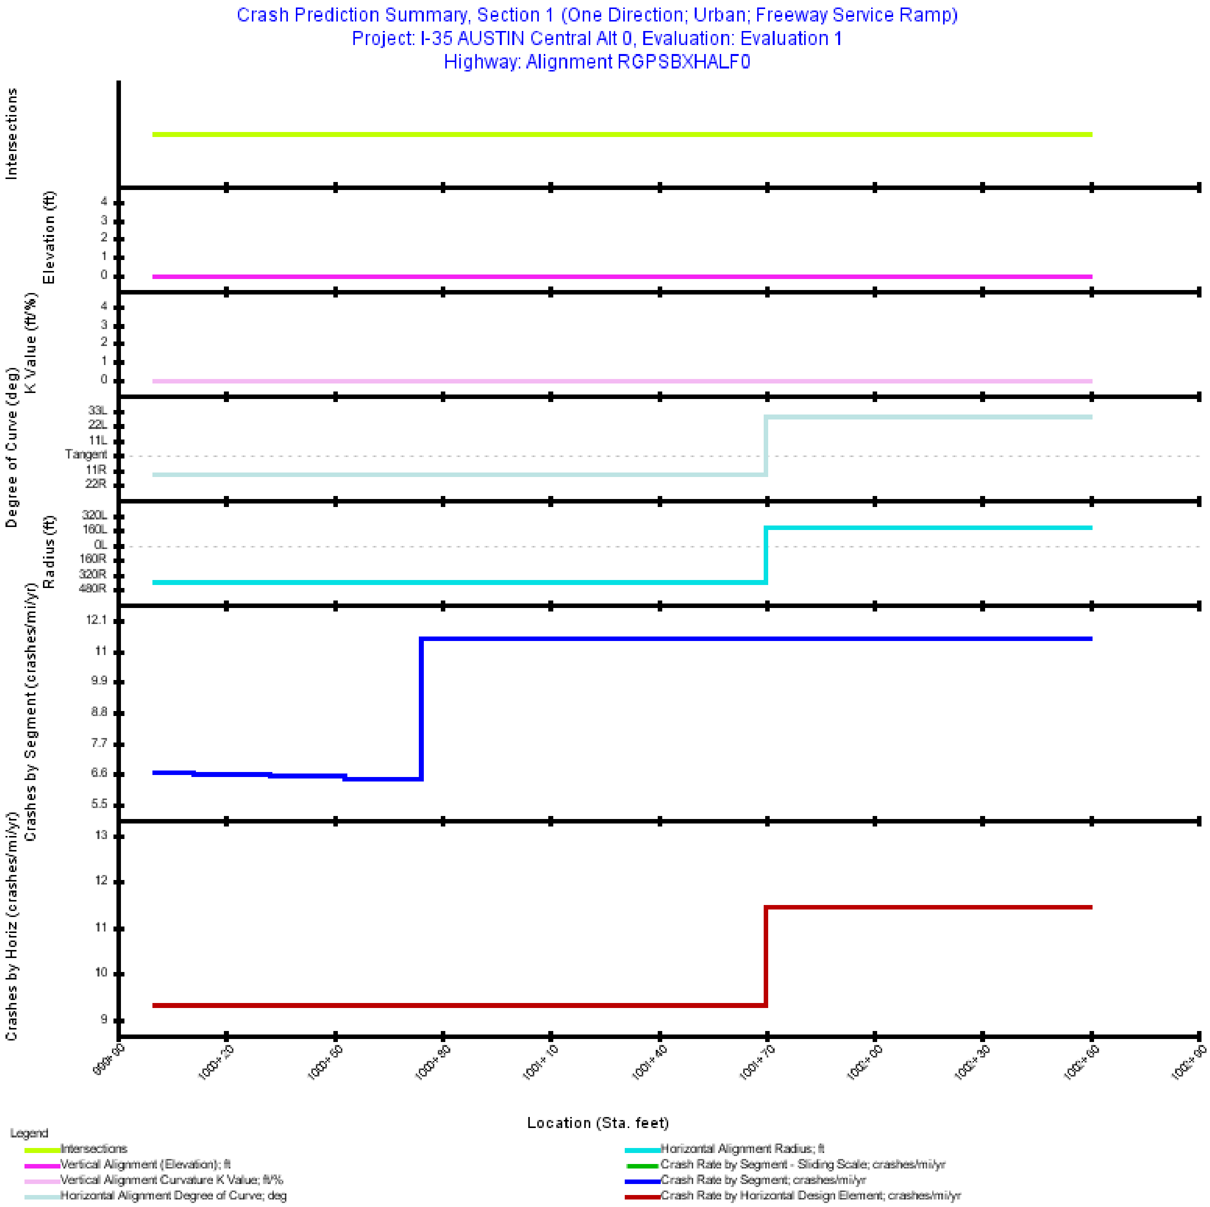

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1001+74.687
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1001+91.584
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.8	0.01	1.5
Highway Segment	Total Single Vehicle Crashes	0.14	47.1	0.15	49.4	0.29	96.5
Highway Segment	Right-Angle Collision	0.00	0.0	0.00	0.0	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.0	0.00	0.1	0.00	0.1
Highway Segment	Rear-end Collision	0.00	1.0	0.01	1.5	0.01	2.5
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.2	0.00	0.6	0.00	0.8
Highway Segment	Total Multiple Vehicle Crashes	0.00	1.3	0.01	2.2	0.01	3.5
Highway Segment	Total Highway Segment Crashes	0.15	48.3	0.16	51.7	0.30	100.0
	Total Crashes	0.15	48.3	0.16	51.7	0.30	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1005+25.000	for segment #1 (1000+00.000 to 1005+25.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1005+25.000	for segment #1 (1000+00.000 to 1005+25.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1005+25.000	for segment #1 (1000+00.000 to 1005+25.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+25.000	1005+43.000	for segment #2 (1005+25.000 to 1005+43.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+25.000	1005+43.000	for segment #2 (1005+25.000 to 1005+43.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+25.000	1005+43.000	for segment #2 (1005+25.000 to 1005+43.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+43.000	1005+61.000	for segment #3 (1005+43.000 to 1005+61.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+43.000	1005+61.000	for segment #3 (1005+43.000 to 1005+61.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+43.000	1005+61.000	for segment #3 (1005+43.000 to 1005+61.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+61.000	1005+78.000	for segment #4 (1005+61.000 to 1005+78.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+61.000	1005+78.000	for segment #4 (1005+61.000 to 1005+78.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+61.000	1005+78.000	for segment #4 (1005+61.000 to 1005+78.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+78.000	1005+96.000	for segment #5 (1005+78.000 to 1005+96.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+78.000	1005+96.000	for segment #5 (1005+78.000 to 1005+96.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+78.000	1005+96.000	for segment #5 (1005+78.000 to 1005+96.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+96.000	1006+13.000	for segment #6 (1005+96.000 to 1006+13.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+96.000	1006+13.000	for segment #6 (1005+96.000 to 1006+13.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+96.000	1006+13.000	for segment #6 (1005+96.000 to 1006+13.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+13.000	1006+31.000	for segment #7 (1006+13.000 to 1006+31.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+13.000	1006+31.000	for segment #7 (1006+13.000 to 1006+31.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+13.000	1006+31.000	for segment #7 (1006+13.000 to 1006+31.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+31.000	1006+49.000	for segment #8 (1006+31.000 to 1006+49.000), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+31.000	1006+49.000	for segment #8 (1006+31.000 to 1006+49.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+31.000	1006+49.000	for segment #8 (1006+31.000 to 1006+49.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+49.000	1006+57.044	for segment #9 (1006+49.000 to 1006+57.044), The ramp type for Ramp Alignment RGPSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+49.000	1006+57.044	for segment #9 (1006+49.000 to 1006+57.044), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+49.000	1006+57.044	for segment #9 (1006+49.000 to 1006+57.044), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Phone:
E-Mail:

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBX120
Highway Comment: Imported from RGPSBX120.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:38:10 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1009+48.591
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1009+48.591
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

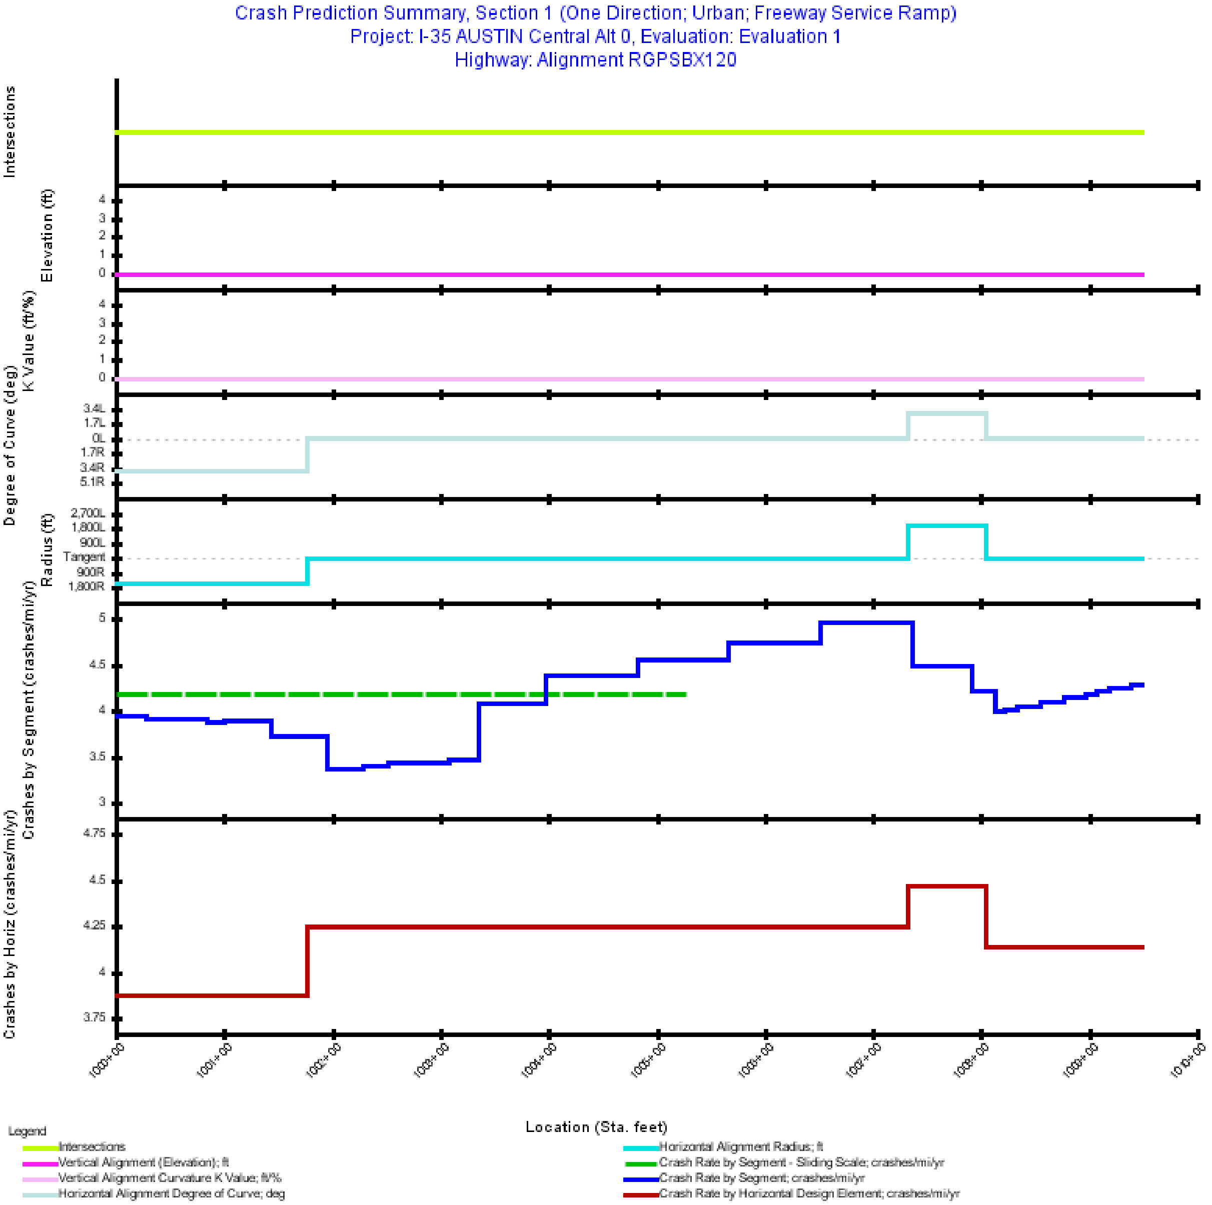

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+28.000	28.00	0.0053	2030: 10,650
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+28.000	1000+84.000	56.00	0.0106	2030: 10,650
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+84.000	1001+00.000	16.00	0.0030	2030: 10,650
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+00.000	1001+43.000	43.00	0.0081	2030: 10,650
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+43.000	1001+96.000	53.00	0.0100	2030: 10,650
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+96.000	1002+28.000	32.00	0.0061	2030: 10,650
7	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+28.000	1002+52.000	24.00	0.0045	2030: 10,650
8	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+52.000	1003+08.000	56.00	0.0106	2030: 10,650
9	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+08.000	1003+13.000	5.00	0.0009	2030: 10,650
10	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+13.000	1003+36.000	23.00	0.0044	2030: 10,650
11	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+36.000	1003+98.000	62.00	0.0117	2030: 10,650
12	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+98.000	1004+82.000	84.00	0.0159	2030: 10,650
13	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+82.000	1005+67.000	85.00	0.0161	2030: 10,650

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.25	33.0	0.25	33.0	0.49	66.0
Highway Segment	Collision with Other Object	0.02	2.3	0.05	6.4	0.07	8.7
Highway Segment	Other Single-vehicle Collision	0.07	9.5	0.04	4.9	0.11	14.5
Highway Segment	Collision with Parked Vehicle	0.01	0.7	0.01	0.7	0.01	1.4
Highway Segment	Total Single Vehicle Crashes	0.34	45.8	0.35	46.1	0.69	91.8
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.01	1.6	0.03	4.1	0.04	5.8
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.4	0.01	1.6	0.01	2.0
Highway Segment	Total Multiple Vehicle Crashes	0.02	2.1	0.04	6.0	0.06	8.2
Highway Segment	Total Highway Segment Crashes	0.36	47.9	0.39	52.1	0.75	100.0
	Total Crashes	0.36	47.9	0.39	52.1	0.75	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+28.000	for segment #1 (1000+00.000 to 1000+28.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+28.000	1000+84.000	for segment #2 (1000+28.000 to 1000+84.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+84.000	1001+00.000	for segment #3 (1000+84.000 to 1001+00.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+00.000	1001+43.000	for segment #4 (1001+00.000 to 1001+43.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+43.000	1001+96.000	for segment #5 (1001+43.000 to 1001+96.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+96.000	1002+28.000	for segment #6 (1001+96.000 to 1002+28.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+28.000	1002+52.000	for segment #7 (1002+28.000 to 1002+52.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+52.000	1003+08.000	for segment #8 (1002+52.000 to 1003+08.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+08.000	1003+13.000	for segment #9 (1003+08.000 to 1003+13.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+13.000	1003+36.000	for segment #10 (1003+13.000 to 1003+36.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+36.000	1003+98.000	for segment #11 (1003+36.000 to 1003+98.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+36.000	1003+98.000	for segment #11 (1003+36.000 to 1003+98.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+98.000	1004+82.000	for segment #12 (1003+98.000 to 1004+82.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+98.000	1004+82.000	for segment #12 (1003+98.000 to 1004+82.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+82.000	1005+67.000	for segment #13 (1004+82.000 to 1005+67.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+82.000	1005+67.000	for segment #13 (1004+82.000 to 1005+67.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+67.000	1006+52.000	for segment #14 (1005+67.000 to 1006+52.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+67.000	1006+52.000	for segment #14 (1005+67.000 to 1006+52.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1006+52.000	1007+37.000	for segment #15 (1006+52.000 to 1007+37.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1006+52.000	1007+37.000	for segment #15 (1006+52.000 to 1007+37.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+37.000	1007+92.000	for segment #16 (1007+37.000 to 1007+92.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+37.000	1007+92.000	for segment #16 (1007+37.000 to 1007+92.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+92.000	1008+13.000	for segment #17 (1007+92.000 to 1008+13.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+92.000	1008+13.000	for segment #17 (1007+92.000 to 1008+13.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+92.000	1008+13.000	for segment #17 (1007+92.000 to 1008+13.000), Right shoulder width (1.72 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1008+13.000	1008+22.000	for segment #18 (1008+13.000 to 1008+22.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+13.000	1008+22.000	for segment #18 (1008+13.000 to 1008+22.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+13.000	1008+22.000	for segment #18 (1008+13.000 to 1008+22.000), Right shoulder width (1.54 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+22.000	1008+34.000	for segment #19 (1008+22.000 to 1008+34.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+22.000	1008+34.000	for segment #19 (1008+22.000 to 1008+34.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+22.000	1008+34.000	for segment #19 (1008+22.000 to 1008+34.000), Right shoulder width (1.42 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+34.000	1008+55.000	for segment #20 (1008+34.000 to 1008+55.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+34.000	1008+55.000	for segment #20 (1008+34.000 to 1008+55.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+34.000	1008+55.000	for segment #20 (1008+34.000 to 1008+55.000), Right shoulder width (1.23 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+55.000	1008+76.000	for segment #21 (1008+55.000 to 1008+76.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+55.000	1008+76.000	for segment #21 (1008+55.000 to 1008+76.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+55.000	1008+76.000	for segment #21 (1008+55.000 to 1008+76.000), Right shoulder width (0.98 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+76.000	1008+97.000	for segment #22 (1008+76.000 to 1008+97.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+76.000	1008+97.000	for segment #22 (1008+76.000 to 1008+97.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+76.000	1008+97.000	for segment #22 (1008+76.000 to 1008+97.000), Right shoulder width (0.73 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+97.000	1009+07.000	for segment #23 (1008+97.000 to 1009+07.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+97.000	1009+07.000	for segment #23 (1008+97.000 to 1009+07.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+97.000	1009+07.000	for segment #23 (1008+97.000 to 1009+07.000), Right shoulder width (0.55 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+07.000	1009+18.000	for segment #24 (1009+07.000 to 1009+18.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1009+07.000	1009+18.000	for segment #24 (1009+07.000 to 1009+18.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+07.000	1009+18.000	for segment #24 (1009+07.000 to 1009+18.000), Right shoulder width (0.43 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+18.000	1009+39.000	for segment #25 (1009+18.000 to 1009+39.000), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1009+18.000	1009+39.000	for segment #25 (1009+18.000 to 1009+39.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+18.000	1009+39.000	for segment #25 (1009+18.000 to 1009+39.000), Right shoulder width (0.24 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+39.000	1009+48.591	for segment #26 (1009+39.000 to 1009+48.591), The ramp type for Ramp Alignment RGPSBX120 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1009+39.000	1009+48.591	for segment #26 (1009+39.000 to 1009+48.591), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1009+39.000	1009+48.591	for segment #26 (1009+39.000 to 1009+48.591), Right shoulder width (0.06 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.18	34.9	0.17	32.7	0.34	67.5
Highway Segment	Collision with Other Object	0.01	2.5	0.03	6.3	0.04	8.8
Highway Segment	Other Single-vehicle Collision	0.05	10.0	0.03	4.9	0.08	14.9
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.7	0.01	1.5
Highway Segment	Total Single Vehicle Crashes	0.24	48.3	0.23	45.6	0.47	93.9
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.1
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.01	1.4	0.01	2.9	0.02	4.3
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.3	0.01	1.1	0.01	1.5
Highway Segment	Total Multiple Vehicle Crashes	0.01	1.8	0.02	4.2	0.03	6.1
Highway Segment	Total Highway Segment Crashes	0.25	50.1	0.25	49.9	0.51	100.0
	Total Crashes	0.25	50.1	0.25	49.9	0.51	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1001+00.000	for segment #1 (1000+00.000 to 1001+00.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+00.000	1001+16.000	for segment #2 (1001+00.000 to 1001+16.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+16.000	1001+47.000	for segment #3 (1001+16.000 to 1001+47.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+47.000	1001+71.000	for segment #4 (1001+47.000 to 1001+71.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+71.000	1001+79.000	for segment #5 (1001+71.000 to 1001+79.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+71.000	1001+79.000	for segment #5 (1001+71.000 to 1001+79.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+71.000	1001+79.000	for segment #5 (1001+71.000 to 1001+79.000), Right shoulder width (1.60 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+79.000	1002+10.000	for segment #6 (1001+79.000 to 1002+10.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+79.000	1002+10.000	for segment #6 (1001+79.000 to 1002+10.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+79.000	1002+10.000	for segment #6 (1001+79.000 to 1002+10.000), Right shoulder width (0.98 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+10.000	1002+25.000	for segment #7 (1002+10.000 to 1002+25.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+10.000	1002+25.000	for segment #7 (1002+10.000 to 1002+25.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+10.000	1002+25.000	for segment #7 (1002+10.000 to 1002+25.000), Right shoulder width (0.24 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+25.000	1003+70.000	for segment #8 (1002+25.000 to 1003+70.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+25.000	1003+70.000	for segment #8 (1002+25.000 to 1003+70.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+25.000	1003+70.000	for segment #8 (1002+25.000 to 1003+70.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+70.000	1003+89.000	for segment #9 (1003+70.000 to 1003+89.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+70.000	1003+89.000	for segment #9 (1003+70.000 to 1003+89.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+70.000	1003+89.000	for segment #9 (1003+70.000 to 1003+89.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+89.000	1004+08.000	for segment #10 (1003+89.000 to 1004+08.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+89.000	1004+08.000	for segment #10 (1003+89.000 to 1004+08.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+89.000	1004+08.000	for segment #10 (1003+89.000 to 1004+08.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+08.000	1004+27.000	for segment #11 (1004+08.000 to 1004+27.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+08.000	1004+27.000	for segment #11 (1004+08.000 to 1004+27.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+08.000	1004+27.000	for segment #11 (1004+08.000 to 1004+27.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+27.000	1004+46.000	for segment #12 (1004+27.000 to 1004+46.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+27.000	1004+46.000	for segment #12 (1004+27.000 to 1004+46.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+27.000	1004+46.000	for segment #12 (1004+27.000 to 1004+46.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1004+46.000	1004+65.000	for segment #13 (1004+46.000 to 1004+65.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+46.000	1004+65.000	for segment #13 (1004+46.000 to 1004+65.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+46.000	1004+65.000	for segment #13 (1004+46.000 to 1004+65.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+65.000	1004+84.000	for segment #14 (1004+65.000 to 1004+84.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+65.000	1004+84.000	for segment #14 (1004+65.000 to 1004+84.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+65.000	1004+84.000	for segment #14 (1004+65.000 to 1004+84.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+84.000	1005+03.000	for segment #15 (1004+84.000 to 1005+03.000), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+84.000	1005+03.000	for segment #15 (1004+84.000 to 1005+03.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+84.000	1005+03.000	for segment #15 (1004+84.000 to 1005+03.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+03.000	1005+11.673	for segment #16 (1005+03.000 to 1005+11.673), The ramp type for Ramp Alignment RGPSBX70 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+03.000	1005+11.673	for segment #16 (1005+03.000 to 1005+11.673), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+03.000	1005+11.673	for segment #16 (1005+03.000 to 1005+11.673), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBN70
Highway Comment: Imported from RGPSBN70.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:34:41 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1005+49.425
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1005+49.425
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

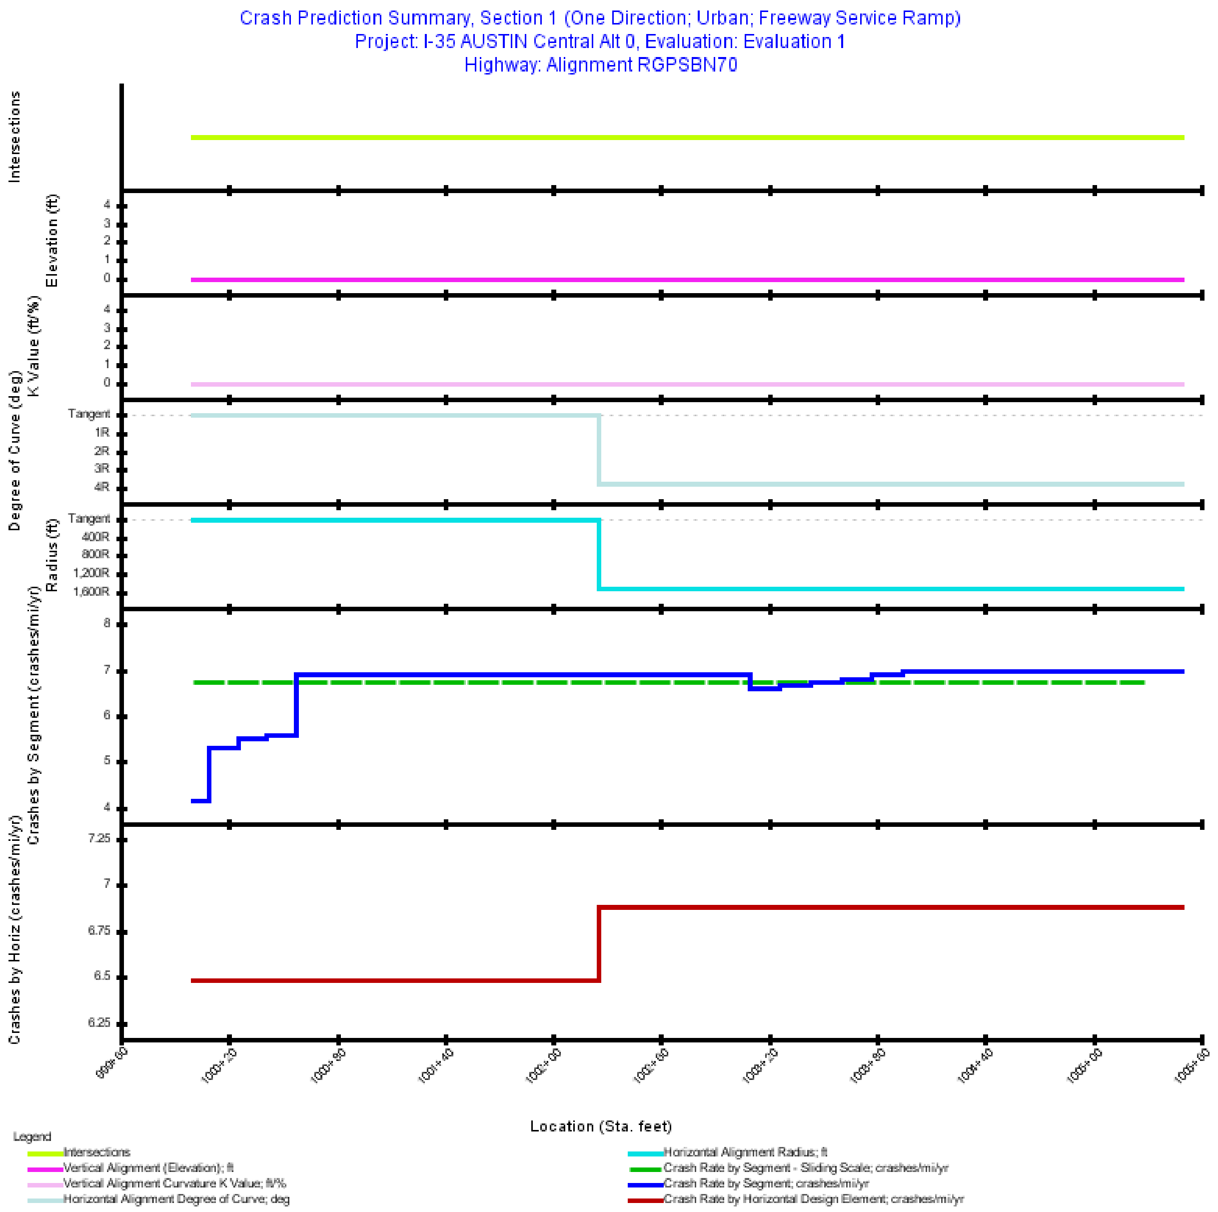

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+09.000	9.00	0.0017	2030: 15,050
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+09.000	1000+25.000	16.00	0.0030	2030: 15,050

Highway Segment	Collision with Parked Vehicle	0.00	0.6	0.00	0.5	0.01	1.1
Highway Segment	Total Single Vehicle Crashes	0.26	36.9	0.23	33.4	0.49	70.3
Highway Segment	Right-Angle Collision	0.00	0.4	0.00	0.3	0.01	0.7
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.4	0.00	0.4	0.01	0.8
Highway Segment	Rear-end Collision	0.07	9.4	0.08	11.8	0.15	21.2
Highway Segment	Sideswipe, Same Direction Collision	0.02	2.3	0.03	4.6	0.05	6.8
Highway Segment	Total Multiple Vehicle Crashes	0.09	12.5	0.12	17.1	0.21	29.7
Highway Segment	Total Highway Segment Crashes	0.35	49.5	0.35	50.5	0.70	100.0
	Total Crashes	0.35	49.5	0.35	50.5	0.70	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+09.000	for segment #1 (1000+00.000 to 1000+09.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+09.000	1000+25.000	for segment #2 (1000+09.000 to 1000+25.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+25.000	1000+41.000	for segment #3 (1000+25.000 to 1000+41.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+41.000	1000+57.000	for segment #4 (1000+41.000 to 1000+57.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+57.000	1003+09.000	for segment #5 (1000+57.000 to 1003+09.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+09.000	1003+26.000	for segment #6 (1003+09.000 to 1003+26.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+26.000	1003+43.000	for segment #7 (1003+26.000 to 1003+43.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+43.000	1003+60.000	for segment #8 (1003+43.000 to 1003+60.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+60.000	1003+77.000	for segment #9 (1003+60.000 to 1003+77.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+77.000	1003+94.000	for segment #10 (1003+77.000 to 1003+94.000), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+94.000	1005+49.425	for segment #11 (1003+94.000 to 1005+49.425), The ramp type for Ramp Alignment RGPSBN70 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Highway Comment: Imported from RGPSBXCHZ0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:48:46 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1002+04.366
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1002+04.366
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Total	0.0282	0.0855	0.3623	0.5222	1.0809

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.02	1.1	0.03	1.3
Highway Segment	Collision with Fixed Object	0.71	34.1	0.76	36.3	1.47	70.4
Highway Segment	Collision with Other Object	0.05	2.4	0.15	7.0	0.20	9.5
Highway Segment	Other Single-vehicle Collision	0.20	9.8	0.11	5.4	0.32	15.3
Highway Segment	Collision with Parked Vehicle	0.01	0.7	0.02	0.8	0.03	1.5
Highway Segment	Total Single Vehicle Crashes	0.98	47.3	1.05	50.7	2.04	98.0
Highway Segment	Right-Angle Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.0	0.00	0.0	0.00	0.1
Highway Segment	Rear-end Collision	0.01	0.6	0.02	0.9	0.03	1.4
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.1	0.01	0.3	0.01	0.5
Highway Segment	Total Multiple Vehicle Crashes	0.01	0.7	0.03	1.3	0.04	2.0
Highway Segment	Total Highway Segment Crashes	1.00	48.0	1.08	52.0	2.08	100.0
	Total Crashes	1.00	48.0	1.08	52.0	2.08	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+08.000	for segment #1 (1000+00.000 to 1000+08.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+08.000	for segment #1 (1000+00.000 to 1000+08.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1000+08.000	for segment #1 (1000+00.000 to 1000+08.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+08.000	1000+22.000	for segment #2 (1000+08.000 to 1000+22.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+08.000	1000+22.000	for segment #2 (1000+08.000 to 1000+22.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+08.000	1000+22.000	for segment #2 (1000+08.000 to 1000+22.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+22.000	1000+37.000	for segment #3 (1000+22.000 to 1000+37.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+22.000	1000+37.000	for segment #3 (1000+22.000 to 1000+37.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+22.000	1000+37.000	for segment #3 (1000+22.000 to 1000+37.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+37.000	1000+51.000	for segment #4 (1000+37.000 to 1000+51.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+37.000	1000+51.000	for segment #4 (1000+37.000 to 1000+51.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+37.000	1000+51.000	for segment #4 (1000+37.000 to 1000+51.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+51.000	1000+66.000	for segment #5 (1000+51.000 to 1000+66.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+51.000	1000+66.000	for segment #5 (1000+51.000 to 1000+66.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+51.000	1000+66.000	for segment #5 (1000+51.000 to 1000+66.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+66.000	1000+80.000	for segment #6 (1000+66.000 to 1000+80.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+66.000	1000+80.000	for segment #6 (1000+66.000 to 1000+80.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+66.000	1000+80.000	for segment #6 (1000+66.000 to 1000+80.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+80.000	1000+95.000	for segment #7 (1000+80.000 to 1000+95.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+80.000	1000+95.000	for segment #7 (1000+80.000 to 1000+95.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+80.000	1000+95.000	for segment #7 (1000+80.000 to 1000+95.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+95.000	1001+09.000	for segment #8 (1000+95.000 to 1001+09.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+95.000	1001+09.000	for segment #8 (1000+95.000 to 1001+09.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+95.000	1001+09.000	for segment #8 (1000+95.000 to 1001+09.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+09.000	1001+57.000	for segment #9 (1001+09.000 to 1001+57.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+09.000	1001+57.000	for segment #9 (1001+09.000 to 1001+57.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+09.000	1001+57.000	for segment #9 (1001+09.000 to 1001+57.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+57.000	1001+61.000	for segment #10 (1001+57.000 to 1001+61.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+57.000	1001+61.000	for segment #10 (1001+57.000 to 1001+61.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1001+57.000	1001+61.000	for segment #10 (1001+57.000 to 1001+61.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+61.000	1001+65.000	for segment #11 (1001+61.000 to 1001+65.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+61.000	1001+65.000	for segment #11 (1001+61.000 to 1001+65.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+61.000	1001+65.000	for segment #11 (1001+61.000 to 1001+65.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+65.000	1001+69.000	for segment #12 (1001+65.000 to 1001+69.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+65.000	1001+69.000	for segment #12 (1001+65.000 to 1001+69.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+65.000	1001+69.000	for segment #12 (1001+65.000 to 1001+69.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+69.000	1001+73.000	for segment #13 (1001+69.000 to 1001+73.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+69.000	1001+73.000	for segment #13 (1001+69.000 to 1001+73.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+69.000	1001+73.000	for segment #13 (1001+69.000 to 1001+73.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+73.000	1001+78.000	for segment #14 (1001+73.000 to 1001+78.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+73.000	1001+78.000	for segment #14 (1001+73.000 to 1001+78.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+73.000	1001+78.000	for segment #14 (1001+73.000 to 1001+78.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+78.000	1001+82.000	for segment #15 (1001+78.000 to 1001+82.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+78.000	1001+82.000	for segment #15 (1001+78.000 to 1001+82.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+78.000	1001+82.000	for segment #15 (1001+78.000 to 1001+82.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+82.000	1001+86.000	for segment #16 (1001+82.000 to 1001+86.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+82.000	1001+86.000	for segment #16 (1001+82.000 to 1001+86.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+82.000	1001+86.000	for segment #16 (1001+82.000 to 1001+86.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+86.000	1001+90.000	for segment #17 (1001+86.000 to 1001+90.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+86.000	1001+90.000	for segment #17 (1001+86.000 to 1001+90.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+86.000	1001+90.000	for segment #17 (1001+86.000 to 1001+90.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+90.000	1001+94.000	for segment #18 (1001+90.000 to 1001+94.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+90.000	1001+94.000	for segment #18 (1001+90.000 to 1001+94.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+90.000	1001+94.000	for segment #18 (1001+90.000 to 1001+94.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+94.000	1001+99.000	for segment #19 (1001+94.000 to 1001+99.000), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+94.000	1001+99.000	for segment #19 (1001+94.000 to 1001+99.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+94.000	1001+99.000	for segment #19 (1001+94.000 to 1001+99.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+99.000	1002+04.366	for segment #20 (1001+99.000 to 1002+04.366), The ramp type for Ramp Alignment RGPSBXCHZ0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+99.000	1002+04.366	for segment #20 (1001+99.000 to 1002+04.366), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+99.000	1002+04.366	for segment #20 (1001+99.000 to 1002+04.366), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Report Overview

Report Generated: May 27, 2021 1:35 PM
Report Template: System: Single Page, 508 Compliant [System] (mlcpm5, Nov 11, 2020 4:35 PM)

Evaluation Date: Thu May 27 13:35:33 CDT 2021
IHSDM Version: v16.0.0 (Sep 30, 2020)
Crash Prediction Module: v11.0.0 (Sep 30, 2020)

User Name: chmeyer
Organization Name:
Phone:
E-Mail:

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBNCHZ0
Highway Comment: Imported from RGPSBNCHZ0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:35:23 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1006+33.651
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1006+33.651
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

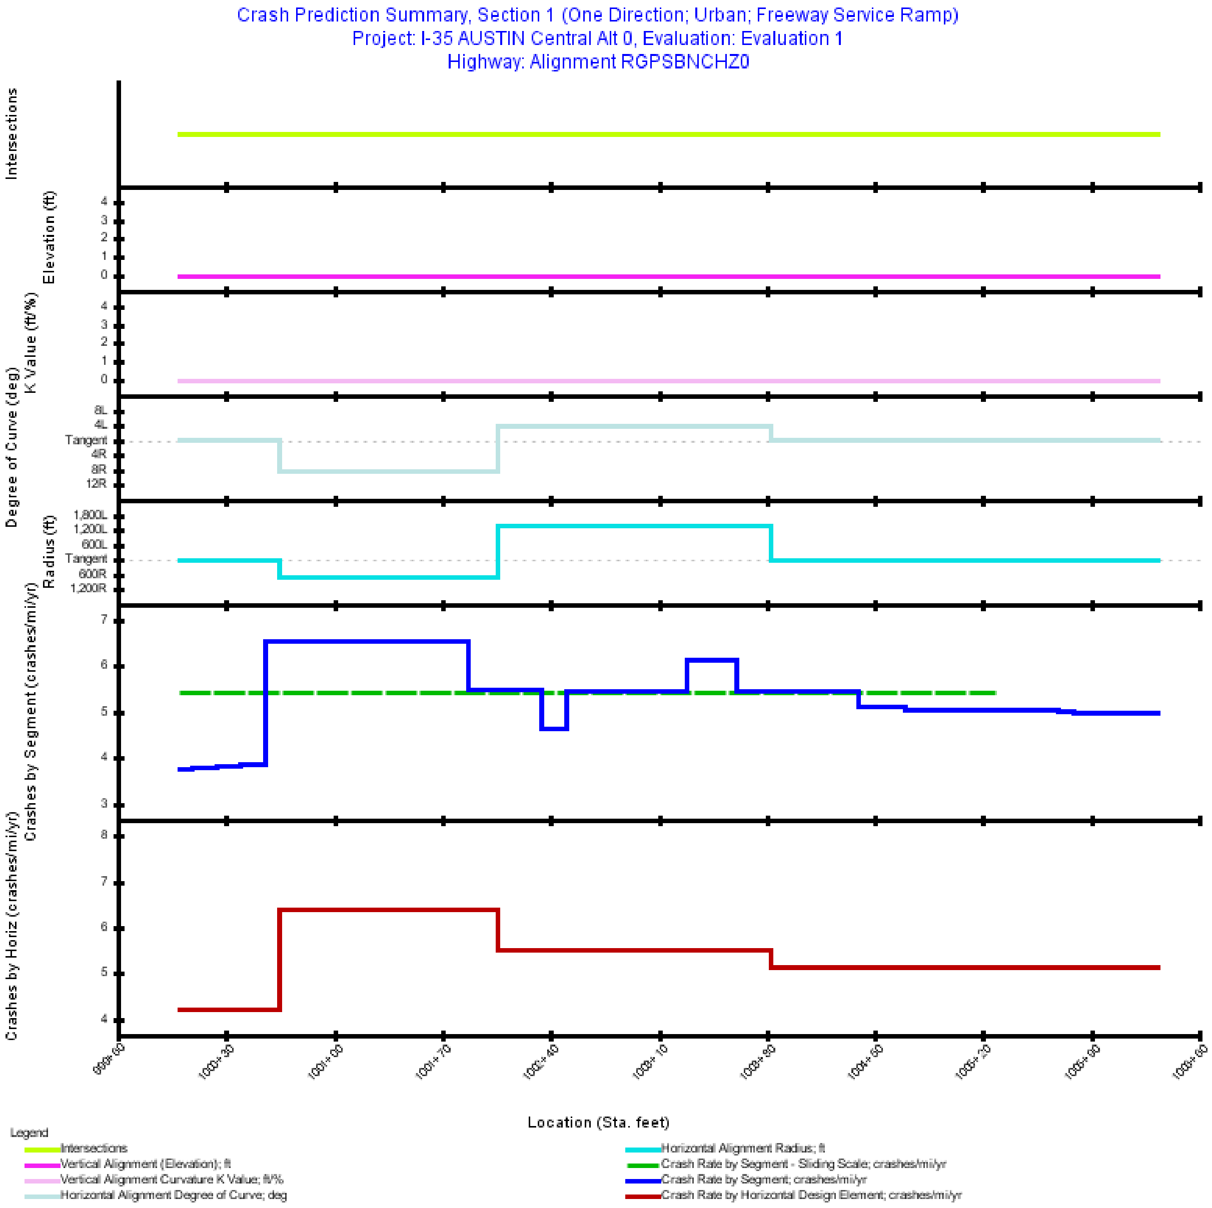

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+08.000	8.00	0.0015	2030: 13,550
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+08.000	1000+24.000	16.00	0.0030	2030: 13,550
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+24.000	1000+39.000	15.00	0.0028	2030: 13,550
4	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+39.000	1000+55.000	16.00	0.0030	2030: 13,550
5	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+55.000	1001+87.000	132.00	0.0250	2030: 13,550
6	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1001+87.000	1002+34.000	47.00	0.0089	2030: 13,550
7	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+34.000	1002+50.000	16.00	0.0030	2030: 13,550
8	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+50.000	1003+28.000	78.00	0.0148	2030: 13,550

Total	0.0062	0.0188	0.1213	0.1665	0.3389

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.1	0.01	0.8	0.01	0.9
Highway Segment	Collision with Fixed Object	0.17	26.8	0.17	25.9	0.34	52.7
Highway Segment	Collision with Other Object	0.01	1.9	0.03	5.0	0.04	6.9
Highway Segment	Other Single-vehicle Collision	0.05	7.7	0.03	3.9	0.08	11.6
Highway Segment	Collision with Parked Vehicle	0.00	0.6	0.00	0.6	0.01	1.1
Highway Segment	Total Single Vehicle Crashes	0.24	37.1	0.24	36.2	0.48	73.3
Highway Segment	Right-Angle Collision	0.00	0.3	0.00	0.3	0.00	0.6
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.3	0.00	0.4	0.01	0.7
Highway Segment	Rear-end Collision	0.05	8.2	0.07	10.9	0.12	19.1
Highway Segment	Sideswipe, Same Direction Collision	0.01	2.0	0.03	4.2	0.04	6.2
Highway Segment	Total Multiple Vehicle Crashes	0.07	10.9	0.10	15.8	0.17	26.7
Highway Segment	Total Highway Segment Crashes	0.31	48.0	0.34	52.0	0.65	100.0
	Total Crashes	0.31	48.0	0.34	52.0	0.65	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+08.000	for segment #1 (1000+00.000 to 1000+08.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1000+08.000	for segment #1 (1000+00.000 to 1000+08.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1000+08.000	for segment #1 (1000+00.000 to 1000+08.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+08.000	1000+24.000	for segment #2 (1000+08.000 to 1000+24.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+08.000	1000+24.000	for segment #2 (1000+08.000 to 1000+24.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+08.000	1000+24.000	for segment #2 (1000+08.000 to 1000+24.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+24.000	1000+39.000	for segment #3 (1000+24.000 to 1000+39.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+24.000	1000+39.000	for segment #3 (1000+24.000 to 1000+39.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+24.000	1000+39.000	for segment #3 (1000+24.000 to 1000+39.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+39.000	1000+55.000	for segment #4 (1000+39.000 to 1000+55.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+39.000	1000+55.000	for segment #4 (1000+39.000 to 1000+55.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+39.000	1000+55.000	for segment #4 (1000+39.000 to 1000+55.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+55.000	1001+87.000	for segment #5 (1000+55.000 to 1001+87.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+55.000	1001+87.000	for segment #5 (1000+55.000 to 1001+87.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+55.000	1001+87.000	for segment #5 (1000+55.000 to 1001+87.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+87.000	1002+34.000	for segment #6 (1001+87.000 to 1002+34.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+87.000	1002+34.000	for segment #6 (1001+87.000 to 1002+34.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+87.000	1002+34.000	for segment #6 (1001+87.000 to 1002+34.000), Right shoulder width (0.25 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+34.000	1002+50.000	for segment #7 (1002+34.000 to 1002+50.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+34.000	1002+50.000	for segment #7 (1002+34.000 to 1002+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+34.000	1002+50.000	for segment #7 (1002+34.000 to 1002+50.000), Right shoulder width (0.59 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+50.000	1003+28.000	for segment #8 (1002+50.000 to 1003+28.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+50.000	1003+28.000	for segment #8 (1002+50.000 to 1003+28.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+50.000	1003+28.000	for segment #8 (1002+50.000 to 1003+28.000), Right shoulder width (1.09 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+28.000	1003+60.000	for segment #9 (1003+28.000 to 1003+60.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+28.000	1003+60.000	for segment #9 (1003+28.000 to 1003+60.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+28.000	1003+60.000	for segment #9 (1003+28.000 to 1003+60.000), Right shoulder width (1.68 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+60.000	1004+39.000	for segment #10 (1003+60.000 to 1004+39.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+60.000	1004+39.000	for segment #10 (1003+60.000 to 1004+39.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1004+39.000	1004+70.000	for segment #11 (1004+39.000 to 1004+70.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+39.000	1004+70.000	for segment #11 (1004+39.000 to 1004+70.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1004+70.000	1005+69.000	for segment #12 (1004+70.000 to 1005+69.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+70.000	1005+69.000	for segment #12 (1004+70.000 to 1005+69.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+69.000	1005+79.000	for segment #13 (1005+69.000 to 1005+79.000), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+69.000	1005+79.000	for segment #13 (1005+69.000 to 1005+79.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1005+79.000	1006+33.651	for segment #14 (1005+79.000 to 1006+33.651), The ramp type for Ramp Alignment RGPSBNCHZ0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+79.000	1006+33.651	for segment #14 (1005+79.000 to 1006+33.651), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBXRVS0
Highway Comment: Imported from RGPSBXRVS0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:52:52 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1003+94.537
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1003+94.537
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

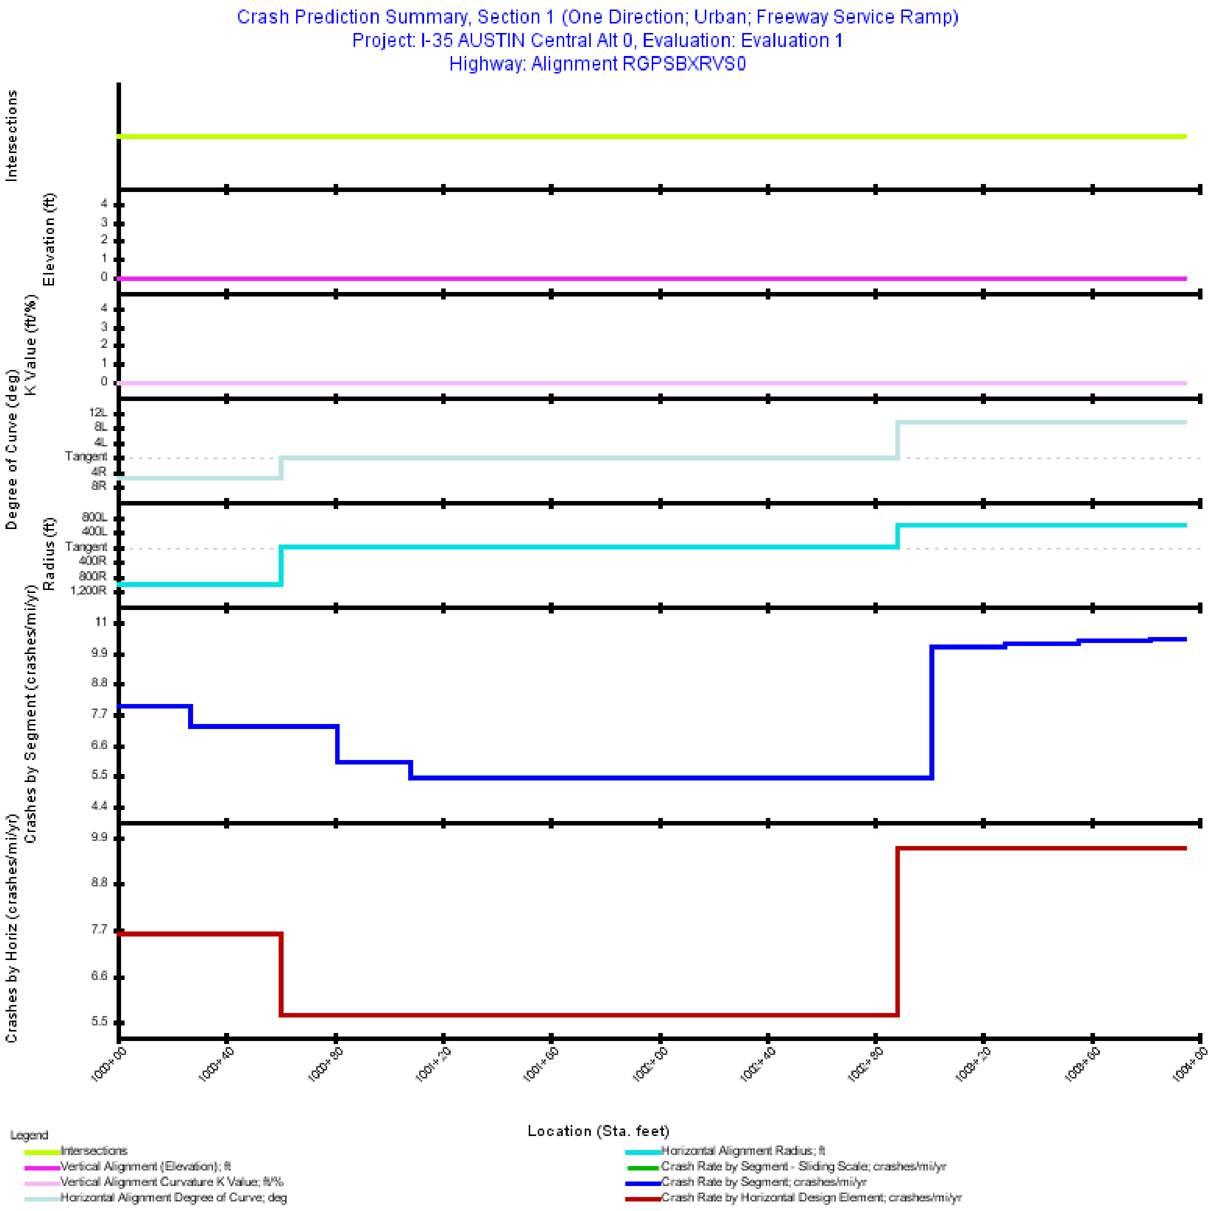

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+27.000	27.00	0.0051	2030: 16,650
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+27.000	1000+81.000	54.00	0.0102	2030: 16,650
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+81.000	1001+08.000	27.00	0.0051	2030: 16,650
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+08.000	1003+01.000	193.00	0.0366	2030: 16,650
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+01.000	1003+28.000	27.00	0.0051	2030: 16,650
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+28.000	1003+55.000	27.00	0.0051	2030: 16,650
7	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+55.000	1003+82.000	27.00	0.0051	2030: 16,650
8	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+82.000	1003+94.537	12.54	0.0024	2030: 16,650

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.0747**
Average Future Road AADT (vpd)	**16,650**
Predicted Crashes	
Total Crashes	**0.53**
Fatal and Injury Crashes	**0.27**
Property-Damage-Only Crashes	**0.26**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**51**
Percent Property-Damage-Only Crashes (%)	**49**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**7.0434**
FI Crash Rate (crashes/mi/yr)	**3.6007**
PDO Crash Rate (crashes/mi/yr)	**3.4427**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.45**
Travel Crash Rate (crashes/million veh-mi)	**1.16**
Travel FI Crash Rate (crashes/million veh-mi)	**0.59**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.57**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Highway Segment	Collision with Other Object	0.01	2.5	0.03	6.0	0.04	8.5
Highway Segment	Other Single-vehicle Collision	0.05	10.1	0.02	4.6	0.08	14.7
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.7	0.01	1.4
Highway Segment	Total Single Vehicle Crashes	0.26	48.5	0.23	43.3	0.48	91.7
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.01	2.0	0.02	3.9	0.03	5.9
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.5	0.01	1.5	0.01	2.0
Highway Segment	Total Multiple Vehicle Crashes	0.01	2.7	0.03	5.6	0.04	8.3
Highway Segment	Total Highway Segment Crashes	0.27	51.1	0.26	48.9	0.53	100.0
	Total Crashes	0.27	51.1	0.26	48.9	0.53	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+27.000	for segment #1 (1000+00.000 to 1000+27.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+27.000	for segment #1 (1000+00.000 to 1000+27.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+27.000	1000+81.000	for segment #2 (1000+27.000 to 1000+81.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+27.000	1000+81.000	for segment #2 (1000+27.000 to 1000+81.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+81.000	1001+08.000	for segment #3 (1000+81.000 to 1001+08.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+81.000	1001+08.000	for segment #3 (1000+81.000 to 1001+08.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+08.000	1003+01.000	for segment #4 (1001+08.000 to 1003+01.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+08.000	1003+01.000	for segment #4 (1001+08.000 to 1003+01.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+01.000	1003+28.000	for segment #5 (1003+01.000 to 1003+28.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+01.000	1003+28.000	for segment #5 (1003+01.000 to 1003+28.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+28.000	1003+55.000	for segment #6 (1003+28.000 to 1003+55.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+28.000	1003+55.000	for segment #6 (1003+28.000 to 1003+55.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+55.000	1003+82.000	for segment #7 (1003+55.000 to 1003+82.000), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+55.000	1003+82.000	for segment #7 (1003+55.000 to 1003+82.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+82.000	1003+94.537	for segment #8 (1003+82.000 to 1003+94.537), The ramp type for Ramp Alignment RGPSBXRVS0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+82.000	1003+94.537	for segment #8 (1003+82.000 to 1003+94.537), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBXWODL0
Highway Comment: Imported from RGPSBXWODL0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:54:24 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1003+25.793
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1003+25.793
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

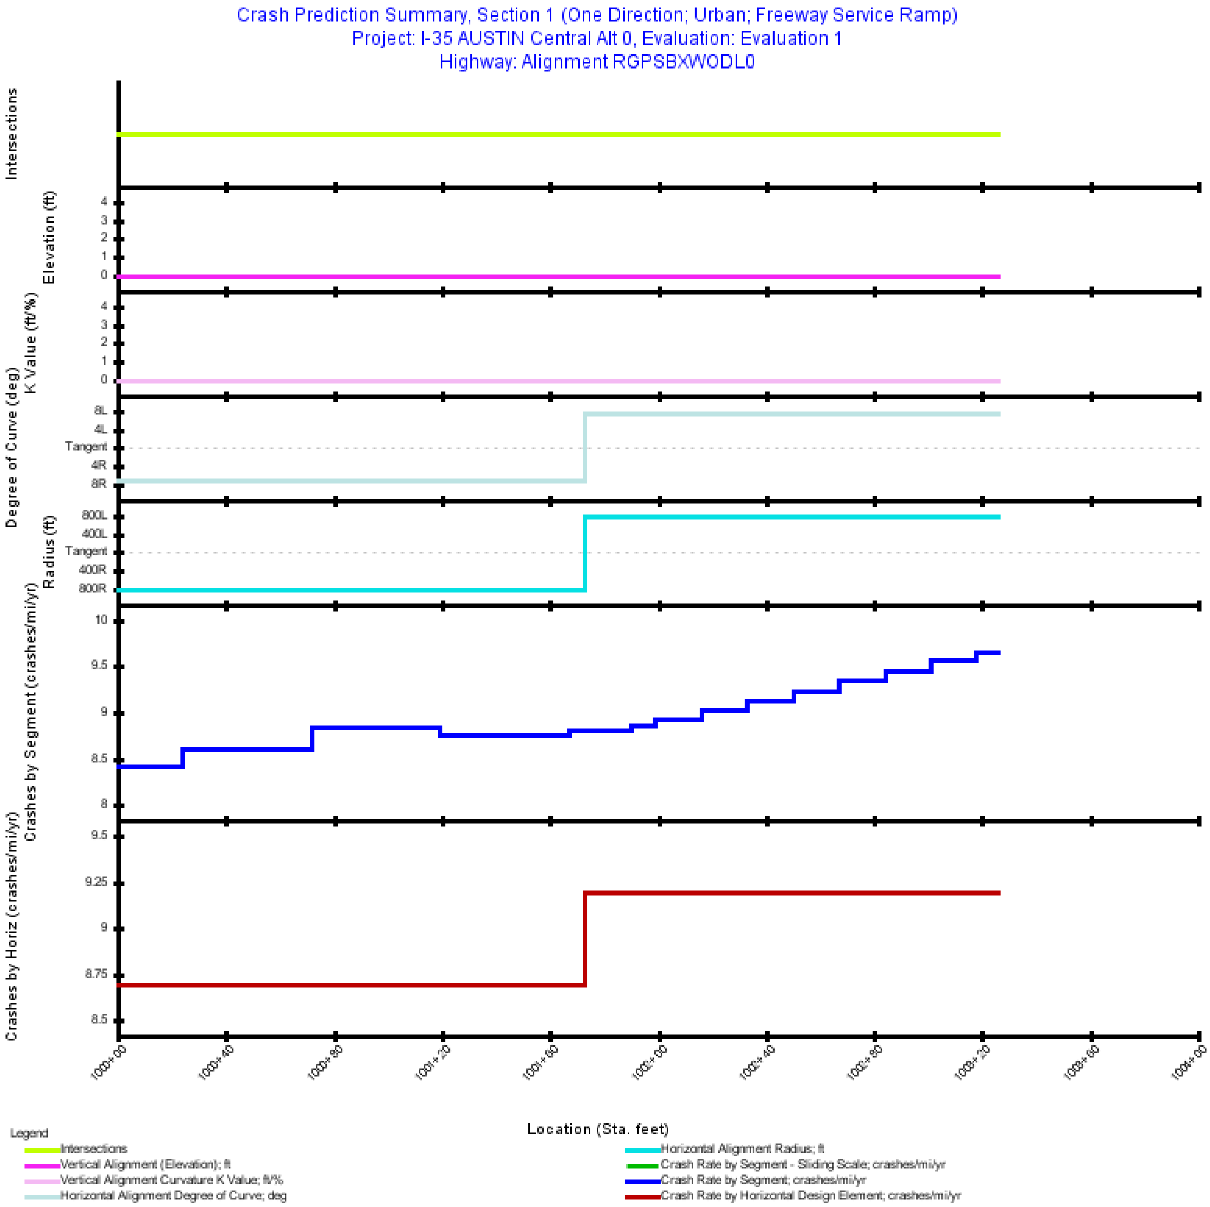

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+24.000	24.00	0.0045	2030: 20,800
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+24.000	1000+72.000	48.00	0.0091	2030: 20,800
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+72.000	1001+19.000	47.00	0.0089	2030: 20,800
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+19.000	1001+67.000	48.00	0.0091	2030: 20,800
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+67.000	1001+90.000	23.00	0.0044	2030: 20,800
6	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+90.000	1001+99.000	9.00	0.0017	2030: 20,800
7	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1001+99.000	1002+16.000	17.00	0.0032	2030: 20,800
8	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+16.000	1002+33.000	17.00	0.0032	2030: 20,800
9	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+33.000	1002+50.000	17.00	0.0032	2030: 20,800
10	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+50.000	1002+67.000	17.00	0.0032	2030: 20,800
11	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+67.000	1002+84.000	17.00	0.0032	2030: 20,800
12	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+84.000	1003+01.000	17.00	0.0032	2030: 20,800
13	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+01.000	1003+18.000	17.00	0.0032	2030: 20,800
14	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+18.000	1003+25.793	7.79	0.0015	2030: 20,800

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.0617**
Average Future Road AADT (vpd)	**20,800**
Predicted Crashes	
Total Crashes	**0.55**
Fatal and Injury Crashes	**0.27**
Property-Damage-Only Crashes	**0.28**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**49**
Percent Property-Damage-Only Crashes (%)	**51**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**8.9245**
FI Crash Rate (crashes/mi/yr)	**4.4057**
PDO Crash Rate (crashes/mi/yr)	**4.5188**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**0.47**
Travel Crash Rate (crashes/million veh-mi)	**1.18**
Travel FI Crash Rate (crashes/million veh-mi)	**0.58**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.59**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Total	0.0085	0.0257	0.1070	0.1306	0.2788

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.18	33.5	0.18	32.3	0.36	65.8
Highway Segment	Collision with Other Object	0.01	2.4	0.04	6.3	0.05	8.6
Highway Segment	Other Single-vehicle Collision	0.05	9.7	0.03	4.8	0.08	14.5
Highway Segment	Collision with Parked Vehicle	0.00	0.7	0.00	0.7	0.01	1.4
Highway Segment	Total Single Vehicle Crashes	0.26	46.5	0.25	45.1	0.50	91.5
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.01	2.2	0.02	3.8	0.03	6.0
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.5	0.01	1.5	0.01	2.0
Highway Segment	Total Multiple Vehicle Crashes	0.02	2.9	0.03	5.5	0.05	8.5
Highway Segment	Total Highway Segment Crashes	0.27	49.4	0.28	50.6	0.55	100.0
	Total Crashes	0.27	49.4	0.28	50.6	0.55	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+24.000	for segment #1 (1000+00.000 to 1000+24.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+00.000	1000+24.000	for segment #1 (1000+00.000 to 1000+24.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+24.000	1000+72.000	for segment #2 (1000+24.000 to 1000+72.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+24.000	1000+72.000	for segment #2 (1000+24.000 to 1000+72.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+72.000	1001+19.000	for segment #3 (1000+72.000 to 1001+19.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+72.000	1001+19.000	for segment #3 (1000+72.000 to 1001+19.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+72.000	1001+19.000	for segment #3 (1000+72.000 to 1001+19.000), Right shoulder width (1.99 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+19.000	1001+67.000	for segment #4 (1001+19.000 to 1001+67.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+19.000	1001+67.000	for segment #4 (1001+19.000 to 1001+67.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+19.000	1001+67.000	for segment #4 (1001+19.000 to 1001+67.000), Right shoulder width (0.99 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+67.000	1001+90.000	for segment #5 (1001+67.000 to 1001+90.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+67.000	1001+90.000	for segment #5 (1001+67.000 to 1001+90.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+67.000	1001+90.000	for segment #5 (1001+67.000 to 1001+90.000), Right shoulder width (0.24 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+90.000	1001+99.000	for segment #6 (1001+90.000 to 1001+99.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+90.000	1001+99.000	for segment #6 (1001+90.000 to 1001+99.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+90.000	1001+99.000	for segment #6 (1001+90.000 to 1001+99.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+99.000	1002+16.000	for segment #7 (1001+99.000 to 1002+16.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+99.000	1002+16.000	for segment #7 (1001+99.000 to 1002+16.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+99.000	1002+16.000	for segment #7 (1001+99.000 to 1002+16.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+16.000	1002+33.000	for segment #8 (1002+16.000 to 1002+33.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+16.000	1002+33.000	for segment #8 (1002+16.000 to 1002+33.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+16.000	1002+33.000	for segment #8 (1002+16.000 to 1002+33.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+33.000	1002+50.000	for segment #9 (1002+33.000 to 1002+50.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+33.000	1002+50.000	for segment #9 (1002+33.000 to 1002+50.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+33.000	1002+50.000	for segment #9 (1002+33.000 to 1002+50.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+50.000	1002+67.000	for segment #10 (1002+50.000 to 1002+67.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+50.000	1002+67.000	for segment #10 (1002+50.000 to 1002+67.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+50.000	1002+67.000	for segment #10 (1002+50.000 to 1002+67.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1002+67.000	1002+84.000	for segment #11 (1002+67.000 to 1002+84.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+67.000	1002+84.000	for segment #11 (1002+67.000 to 1002+84.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+67.000	1002+84.000	for segment #11 (1002+67.000 to 1002+84.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+84.000	1003+01.000	for segment #12 (1002+84.000 to 1003+01.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+84.000	1003+01.000	for segment #12 (1002+84.000 to 1003+01.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+84.000	1003+01.000	for segment #12 (1002+84.000 to 1003+01.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+01.000	1003+18.000	for segment #13 (1003+01.000 to 1003+18.000), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+01.000	1003+18.000	for segment #13 (1003+01.000 to 1003+18.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+01.000	1003+18.000	for segment #13 (1003+01.000 to 1003+18.000), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+18.000	1003+25.793	for segment #14 (1003+18.000 to 1003+25.793), The ramp type for Ramp Alignment RGPSBXWODL0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+18.000	1003+25.793	for segment #14 (1003+18.000 to 1003+25.793), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+18.000	1003+25.793	for segment #14 (1003+18.000 to 1003+25.793), Right shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1000+24.000	for segment #1 (1000+00.000 to 1000+24.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1000+24.000	1000+72.000	for segment #2 (1000+24.000 to 1000+72.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1000+72.000	1001+19.000	for segment #3 (1000+72.000 to 1001+19.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1001+19.000	1001+67.000	for segment #4 (1001+19.000 to 1001+67.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1001+67.000	1001+90.000	for segment #5 (1001+67.000 to 1001+90.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1001+90.000	1001+99.000	for segment #6 (1001+90.000 to 1001+99.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1001+99.000	1002+16.000	for segment #7 (1001+99.000 to 1002+16.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1002+16.000	1002+33.000	for segment #8 (1002+16.000 to 1002+33.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1002+33.000	1002+50.000	for segment #9 (1002+33.000 to 1002+50.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1002+50.000	1002+67.000	for segment #10 (1002+50.000 to 1002+67.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1002+67.000	1002+84.000	for segment #11 (1002+67.000 to 1002+84.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1002+84.000	1003+01.000	for segment #12 (1002+84.000 to 1003+01.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1003+01.000	1003+18.000	for segment #13 (1003+01.000 to 1003+18.000), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX
1003+18.000	1003+25.793	for segment #14 (1003+18.000 to 1003+25.793), traffic volume (20,800 vpd) for 2030 is not within the model limit (18,000 vpd) for reliable results for segment type 1EX

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBNRVS0
Highway Comment: Imported from RGPSBNRVS0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:36:46 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1003+39.304
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1003+39.304
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

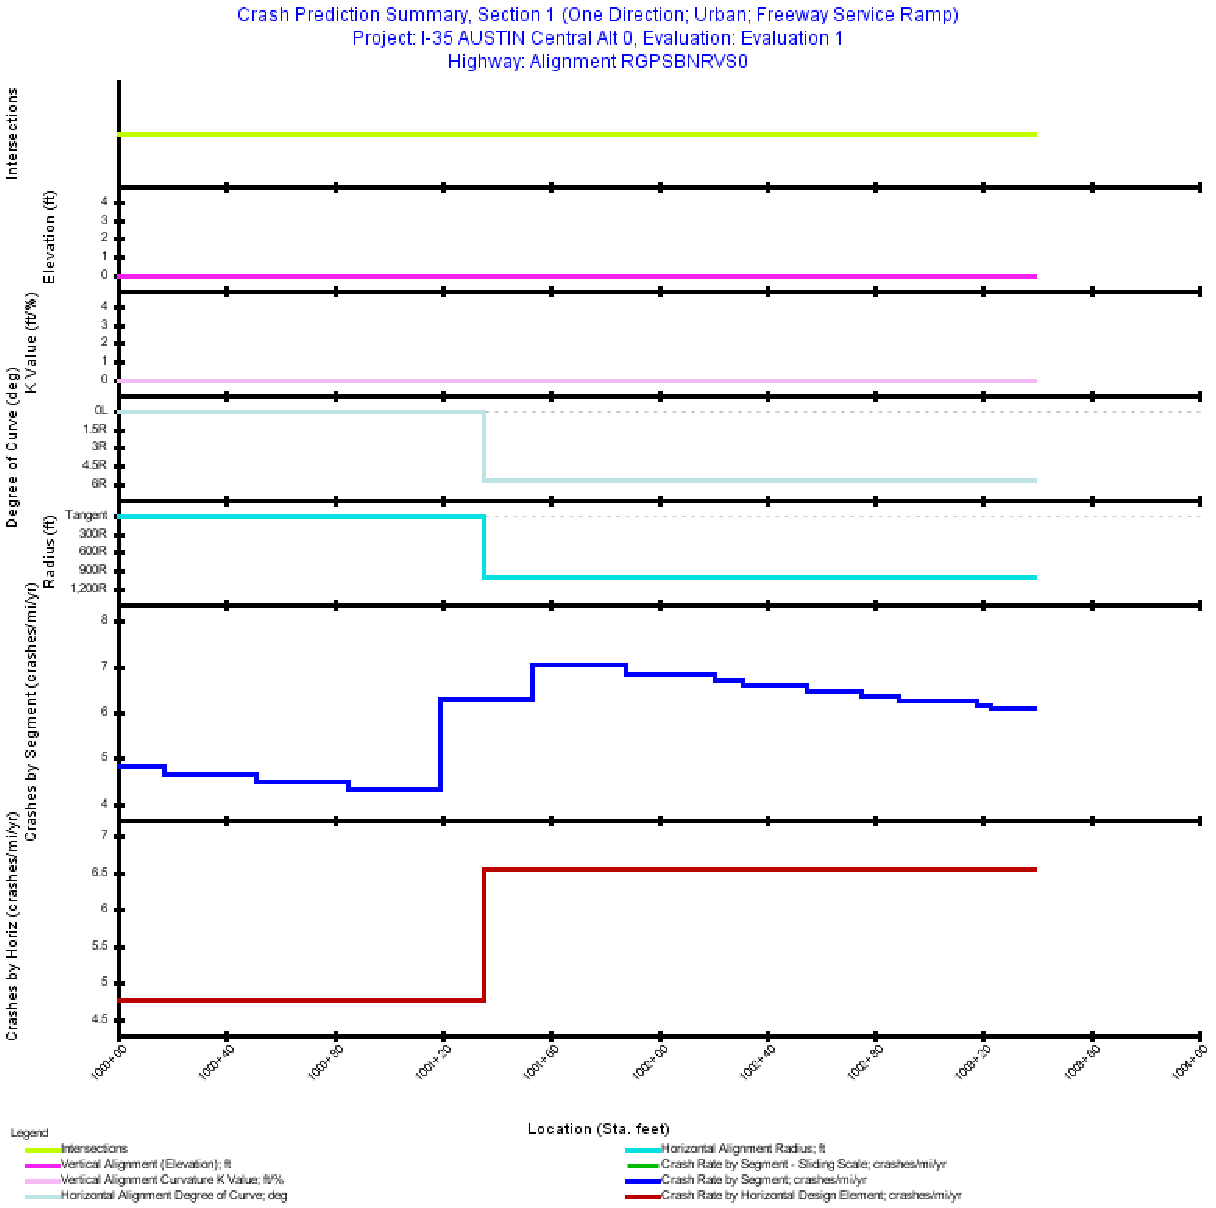

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+17.000	17.00	0.0032	2030: 17,150
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+17.000	1000+51.000	34.00	0.0064	2030: 17,150
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+51.000	1000+85.000	34.00	0.0064	2030: 17,150
4	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+85.000	1001+19.000	34.00	0.0064	2030: 17,150
5	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1001+19.000	1001+53.000	34.00	0.0064	2030: 17,150
6	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1001+53.000	1001+88.000	35.00	0.0066	2030: 17,150
7	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1001+88.000	1002+21.000	33.00	0.0063	2030: 17,150
8	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+21.000	1002+31.000	10.00	0.0019	2030: 17,150

	Total Crashes	0.17	44.9	0.21	55.1	0.38	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+17.000	for segment #1 (1000+00.000 to 1000+17.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1000+17.000	for segment #1 (1000+00.000 to 1000+17.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+17.000	1000+51.000	for segment #2 (1000+17.000 to 1000+51.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+17.000	1000+51.000	for segment #2 (1000+17.000 to 1000+51.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+51.000	1000+85.000	for segment #3 (1000+51.000 to 1000+85.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+51.000	1000+85.000	for segment #3 (1000+51.000 to 1000+85.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+85.000	1001+19.000	for segment #4 (1000+85.000 to 1001+19.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+85.000	1001+19.000	for segment #4 (1000+85.000 to 1001+19.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+19.000	1001+53.000	for segment #5 (1001+19.000 to 1001+53.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+19.000	1001+53.000	for segment #5 (1001+19.000 to 1001+53.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+53.000	1001+88.000	for segment #6 (1001+53.000 to 1001+88.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+53.000	1001+88.000	for segment #6 (1001+53.000 to 1001+88.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+88.000	1002+21.000	for segment #7 (1001+88.000 to 1002+21.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+88.000	1002+21.000	for segment #7 (1001+88.000 to 1002+21.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+21.000	1002+31.000	for segment #8 (1002+21.000 to 1002+31.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+21.000	1002+31.000	for segment #8 (1002+21.000 to 1002+31.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+31.000	1002+55.000	for segment #9 (1002+31.000 to 1002+55.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+31.000	1002+55.000	for segment #9 (1002+31.000 to 1002+55.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+55.000	1002+75.000	for segment #10 (1002+55.000 to 1002+75.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+55.000	1002+75.000	for segment #10 (1002+55.000 to 1002+75.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+75.000	1002+89.000	for segment #11 (1002+75.000 to 1002+89.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+75.000	1002+89.000	for segment #11 (1002+75.000 to 1002+89.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+89.000	1003+18.000	for segment #12 (1002+89.000 to 1003+18.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+89.000	1003+18.000	for segment #12 (1002+89.000 to 1003+18.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+18.000	1003+23.000	for segment #13 (1003+18.000 to 1003+23.000), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+18.000	1003+23.000	for segment #13 (1003+18.000 to 1003+23.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+23.000	1003+39.304	for segment #14 (1003+23.000 to 1003+39.304), The ramp type for Ramp Alignment RGPSBNRVS0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1003+23.000	1003+39.304	for segment #14 (1003+23.000 to 1003+39.304), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBNWODL0
Highway Comment: Imported from RGPSBNWODL0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:37:28 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1012+67.282
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1012+67.282
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

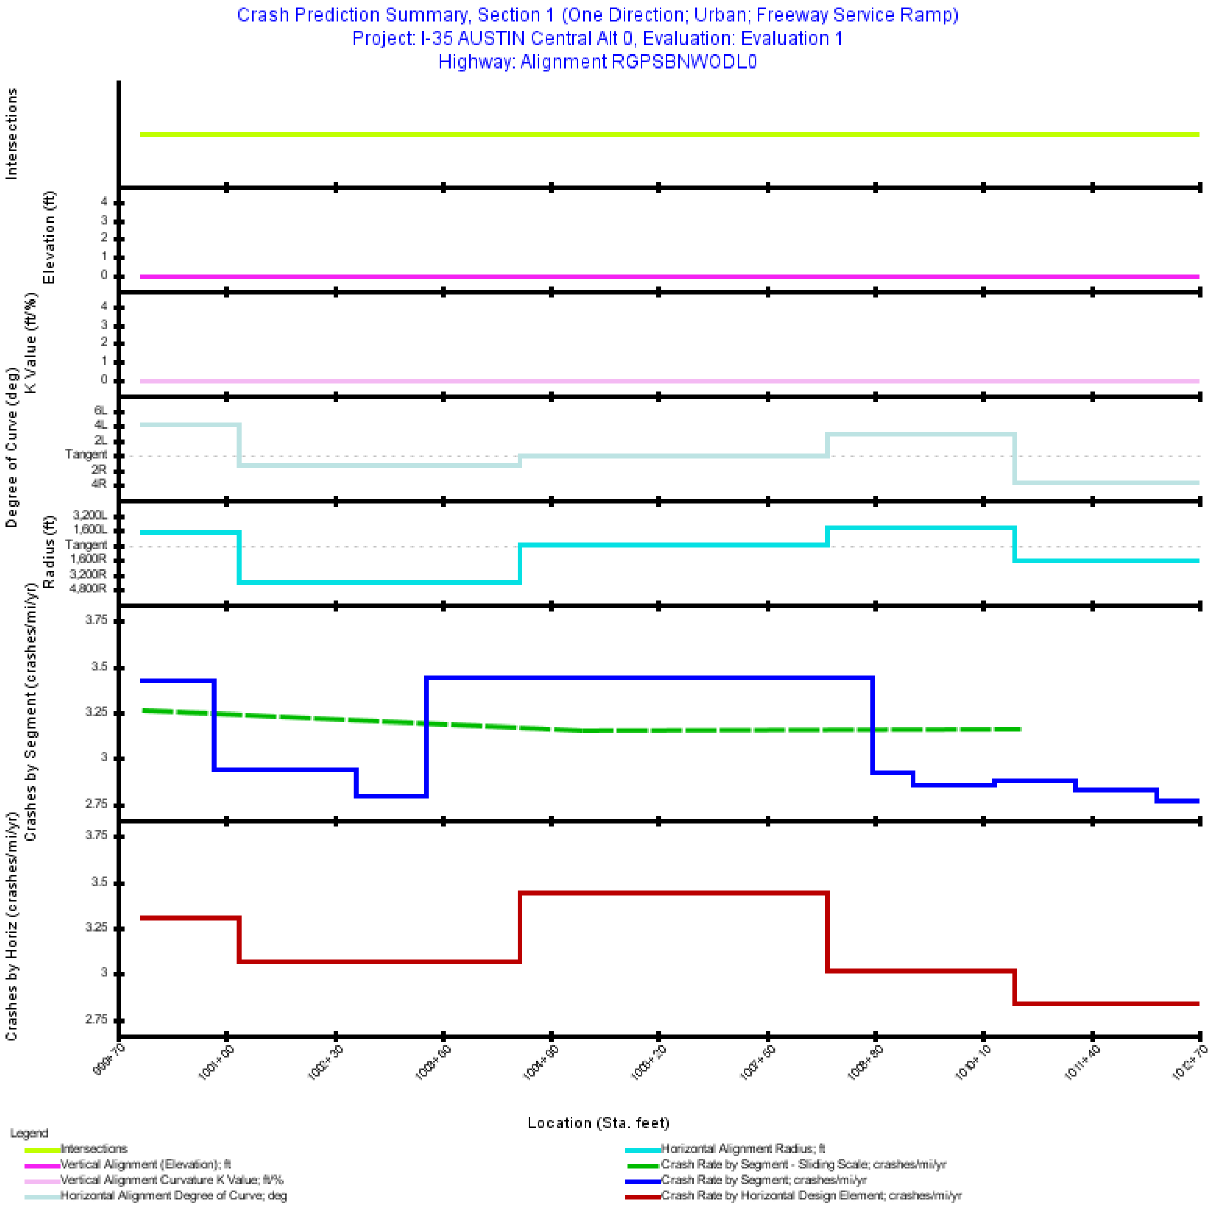

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+86.000	86.00	0.0163	2030: 8,400
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+86.000	1002+56.000	170.00	0.0322	2030: 8,400
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1002+56.000	1003+41.000	85.00	0.0161	2030: 8,400

Highway Segment	Collision with Other Object	0.01	1.8	0.04	5.6	0.06	7.4
Highway Segment	Other Single-vehicle Collision	0.06	7.4	0.03	4.3	0.09	11.7
Highway Segment	Collision with Parked Vehicle	0.00	0.5	0.01	0.6	0.01	1.2
Highway Segment	Total Single Vehicle Crashes	0.27	35.8	0.30	40.1	0.57	75.9
Highway Segment	Right-Angle Collision	0.00	0.3	0.00	0.3	0.00	0.5
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.3	0.00	0.4	0.01	0.6
Highway Segment	Rear-end Collision	0.05	6.6	0.08	10.6	0.13	17.1
Highway Segment	Sideswipe, Same Direction Collision	0.01	1.6	0.03	4.1	0.04	5.7
Highway Segment	Total Multiple Vehicle Crashes	0.07	8.8	0.12	15.3	0.18	24.1
Highway Segment	Total Highway Segment Crashes	0.34	44.5	0.42	55.5	0.76	100.0
	Total Crashes	0.34	44.5	0.42	55.5	0.76	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+86.000	for segment #1 (1000+00.000 to 1000+86.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+86.000	1002+56.000	for segment #2 (1000+86.000 to 1002+56.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+56.000	1003+41.000	for segment #3 (1002+56.000 to 1003+41.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+41.000	1008+77.000	for segment #4 (1003+41.000 to 1008+77.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1008+77.000	1009+26.000	for segment #5 (1008+77.000 to 1009+26.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1009+26.000	1010+24.000	for segment #6 (1009+26.000 to 1010+24.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+24.000	1011+21.000	for segment #7 (1010+24.000 to 1011+21.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1011+21.000	1012+19.000	for segment #8 (1011+21.000 to 1012+19.000), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1012+19.000	1012+67.282	for segment #9 (1012+19.000 to 1012+67.282), The ramp type for Ramp Alignment RGPSBNWODL0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBXWODW0
Highway Comment: Imported from RGPSBXWODW0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:55:19 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1012+86.962
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1012+86.962
Functional Class: Freeway Service Ramp
Type of Alignment: One Direction
Model Category: Freeway Service Ramp
Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

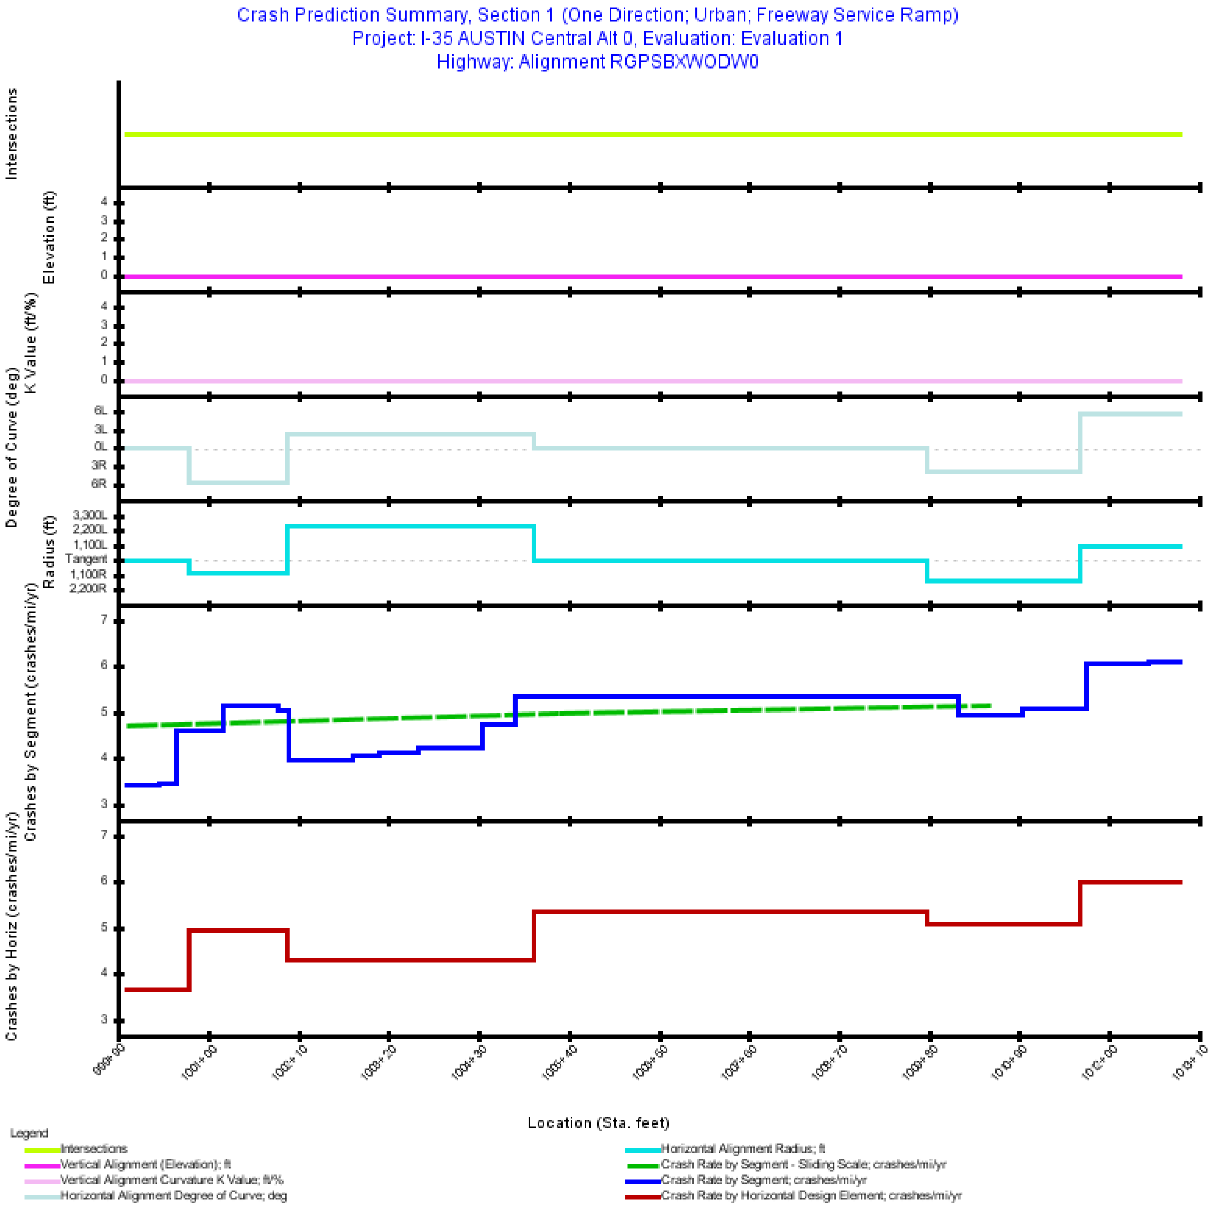

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.2	0.01	1.0	0.01	1.2
Highway Segment	Collision with Fixed Object	0.41	34.0	0.39	32.0	0.80	66.0
Highway Segment	Collision with Other Object	0.03	2.4	0.07	6.2	0.10	8.6
Highway Segment	Other Single-vehicle Collision	0.12	9.8	0.06	4.8	0.18	14.6
Highway Segment	Collision with Parked Vehicle	0.01	0.7	0.01	0.7	0.02	1.4
Highway Segment	Total Single Vehicle Crashes	0.57	47.1	0.54	44.7	1.12	91.8
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.1	0.00	0.2
Highway Segment	Rear-end Collision	0.02	1.7	0.05	4.1	0.07	5.8
Highway Segment	Sideswipe, Same Direction Collision	0.01	0.4	0.02	1.6	0.02	2.0
Highway Segment	Total Multiple Vehicle Crashes	0.03	2.3	0.07	5.9	0.10	8.2
Highway Segment	Total Highway Segment Crashes	0.60	49.4	0.61	50.6	1.22	100.0
	Total Crashes	0.60	49.4	0.61	50.6	1.22	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+40.000	for segment #1 (1000+00.000 to 1000+40.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+40.000	1000+62.000	for segment #2 (1000+40.000 to 1000+62.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+62.000	1001+19.000	for segment #3 (1000+62.000 to 1001+19.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+19.000	1001+86.000	for segment #4 (1001+19.000 to 1001+86.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+86.000	1001+98.000	for segment #5 (1001+86.000 to 1001+98.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1001+98.000	1002+77.000	for segment #6 (1001+98.000 to 1002+77.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+77.000	1003+09.000	for segment #7 (1002+77.000 to 1003+09.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+09.000	1003+56.000	for segment #8 (1003+09.000 to 1003+56.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+56.000	1004+35.000	for segment #9 (1003+56.000 to 1004+35.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+35.000	1004+74.000	for segment #10 (1004+35.000 to 1004+74.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+74.000	1010+16.000	for segment #11 (1004+74.000 to 1010+16.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1010+16.000	1010+94.000	for segment #12 (1010+16.000 to 1010+94.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1010+94.000	1011+71.000	for segment #13 (1010+94.000 to 1011+71.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1011+71.000	1012+49.000	for segment #14 (1011+71.000 to 1012+49.000), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1012+49.000	1012+86.962	for segment #15 (1012+49.000 to 1012+86.962), The ramp type for Ramp Alignment RGPSBXWODW0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

E-Mail:

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBNOLF0
Highway Comment: Imported from RGPSBNOLF0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:36:04 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1012+02.965
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1012+02.965
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

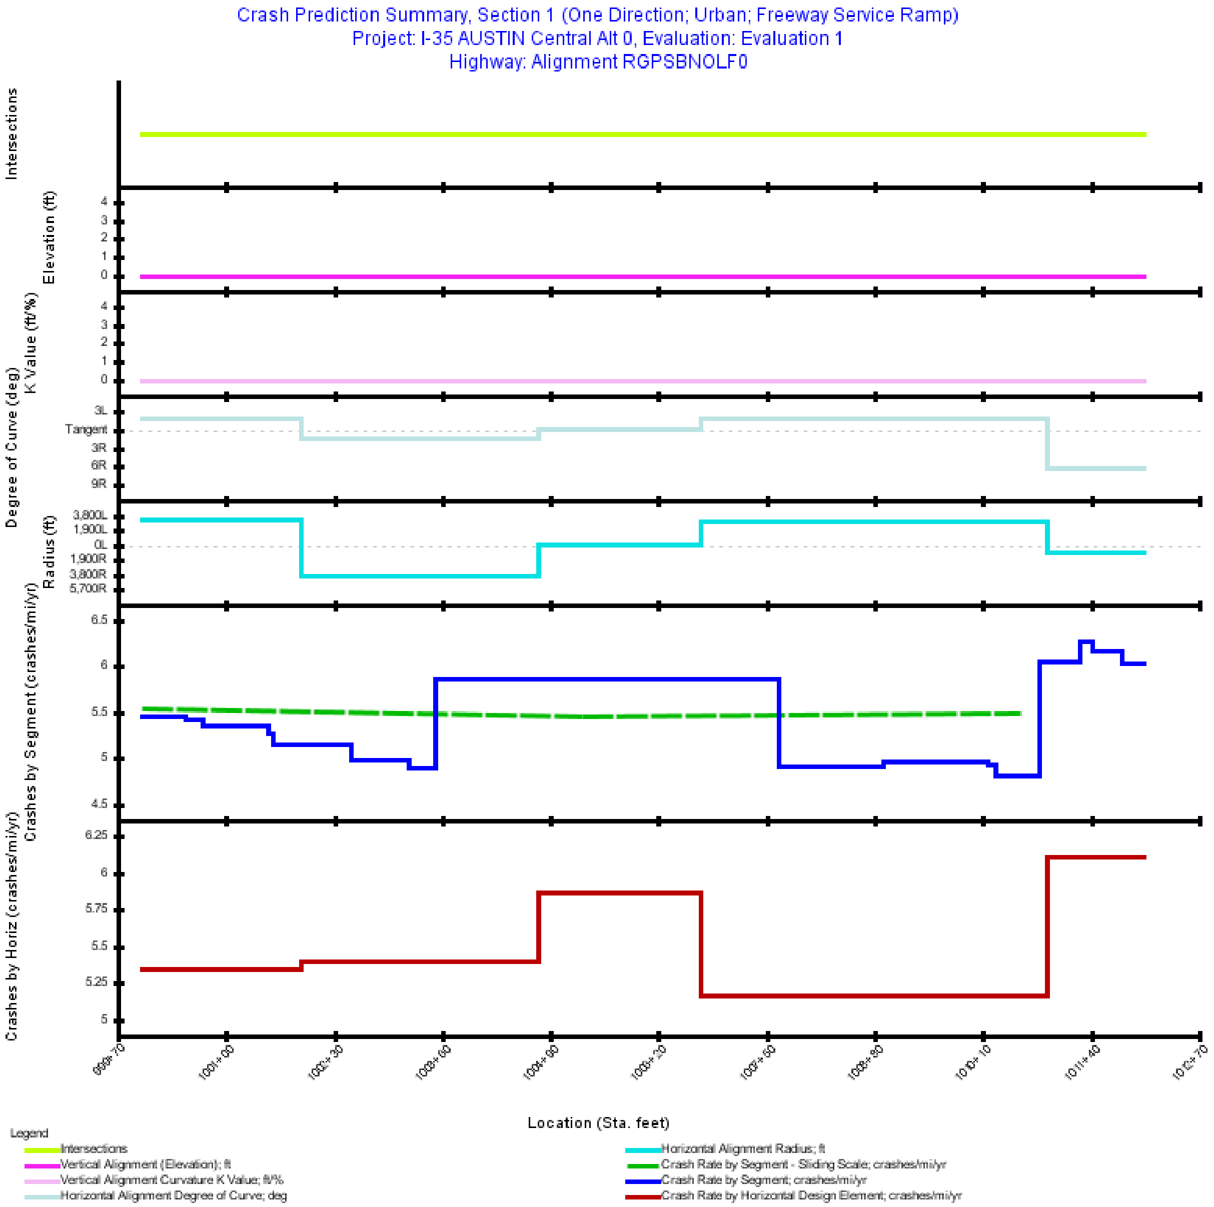

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+51.000	51.00	0.0097	2030: 15,900
2	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+51.000	1000+73.000	22.00	0.0042	2030: 15,900
3	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+73.000	1001+51.000	78.00	0.0148	2030: 15,900
4	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1001+51.000	1001+56.000	5.00	0.0009	2030: 15,900

Highway Segment	Rear-end Collision	0.11	9.1	0.17	13.4	0.28	22.4
Highway Segment	Sideswipe, Same Direction Collision	0.03	2.2	0.06	5.1	0.09	7.3
Highway Segment	Total Multiple Vehicle Crashes	0.15	12.1	0.24	19.4	0.39	31.4
Highway Segment	Total Highway Segment Crashes	0.56	45.2	0.68	54.8	1.24	100.0
	Total Crashes	0.56	45.2	0.68	54.8	1.24	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+51.000	for segment #1 (1000+00.000 to 1000+51.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+51.000	1000+73.000	for segment #2 (1000+51.000 to 1000+73.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+73.000	1001+51.000	for segment #3 (1000+73.000 to 1001+51.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+51.000	1001+56.000	for segment #4 (1001+51.000 to 1001+56.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+56.000	1002+51.000	for segment #5 (1001+56.000 to 1002+51.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+51.000	1003+20.000	for segment #6 (1002+51.000 to 1003+20.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+20.000	1003+51.000	for segment #7 (1003+20.000 to 1003+51.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+51.000	1007+64.000	for segment #8 (1003+51.000 to 1007+64.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1007+64.000	1008+90.000	for segment #9 (1007+64.000 to 1008+90.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1008+90.000	1010+00.000	for segment #10 (1008+90.000 to 1010+00.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+00.000	1010+15.000	for segment #11 (1010+00.000 to 1010+15.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+15.000	1010+26.000	for segment #12 (1010+15.000 to 1010+26.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+26.000	1010+77.000	for segment #13 (1010+26.000 to 1010+77.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1010+77.000	1011+27.000	for segment #14 (1010+77.000 to 1011+27.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1011+27.000	1011+41.000	for segment #15 (1011+27.000 to 1011+41.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1011+41.000	1011+78.000	for segment #16 (1011+41.000 to 1011+78.000), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1011+78.000	1012+02.965	for segment #17 (1011+78.000 to 1012+02.965), The ramp type for Ramp Alignment RGPSBNOLF0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RGPSBX710
Highway Comment: Imported from RGPSBX710.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:40:14 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1018+34.388
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1018+34.388
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

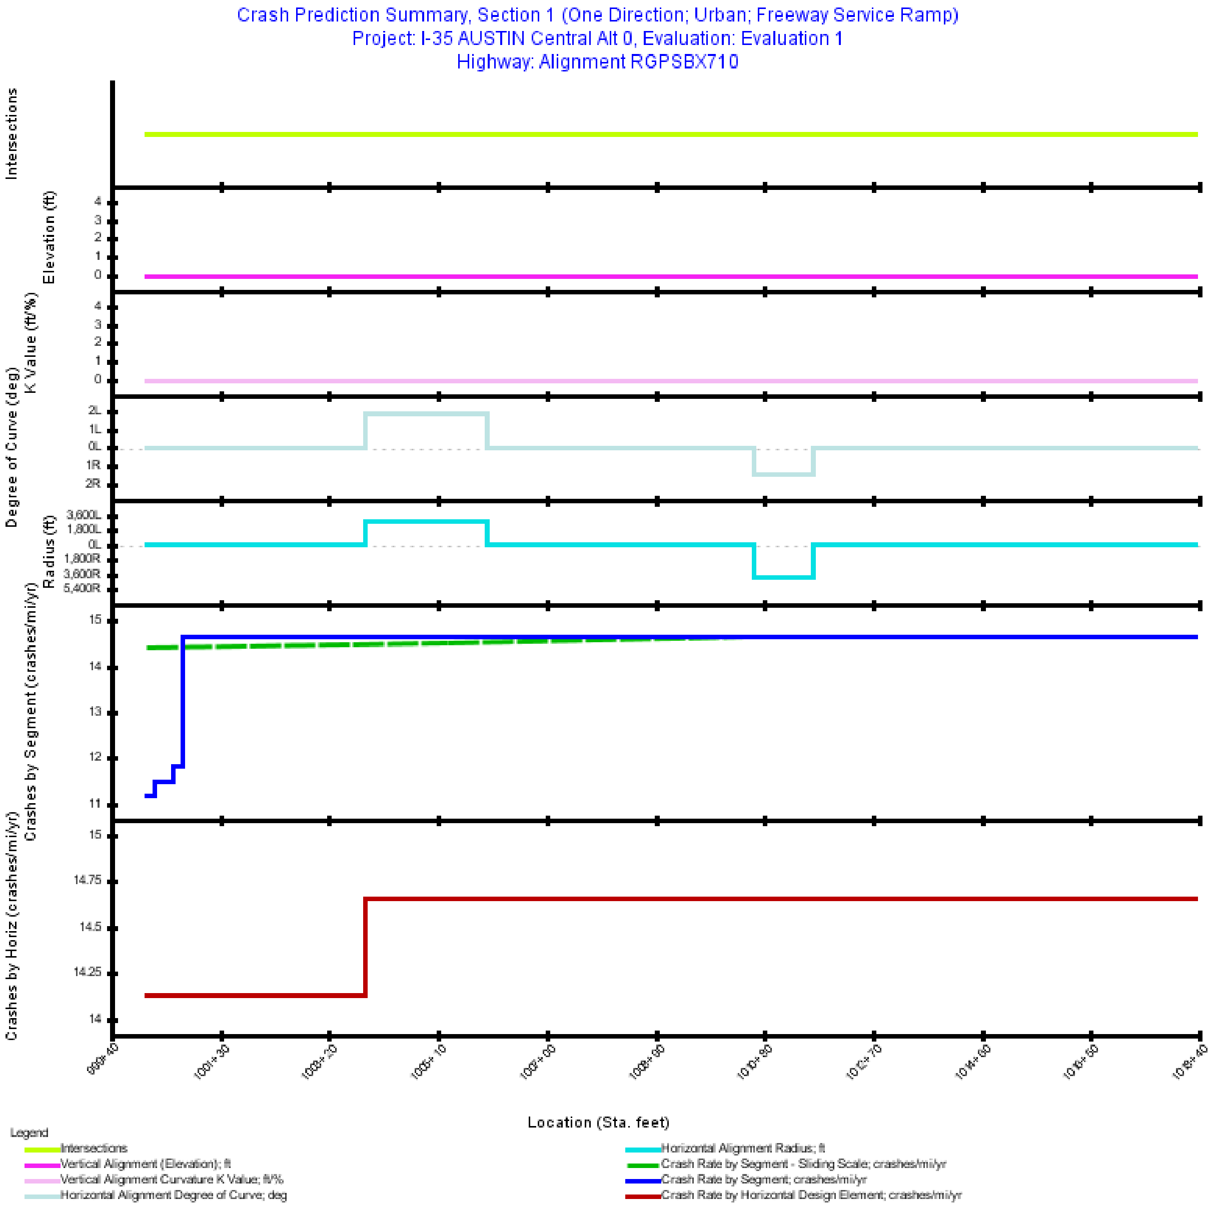

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1000+00.000	1000+16.000	16.00	0.0030	2030: 34,450
2	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1000+16.000	1000+48.000	32.00	0.0061	2030: 34,450
3	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1000+48.000	1000+64.000	16.00	0.0030	2030: 34,450
4	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1000+64.000	1018+34.388	1,770.39	0.3353	2030: 34,450

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.3474**
Average Future Road AADT (vpd)	**34,450**
Predicted Crashes	
Total Crashes	**5.05**
Fatal and Injury Crashes	**2.18**
Property-Damage-Only Crashes	**2.87**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**43**
Percent Property-Damage-Only Crashes (%)	**57**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**14.5464**
FI Crash Rate (crashes/mi/yr)	**6.2852**
PDO Crash Rate (crashes/mi/yr)	**8.2613**
Predicted Travel Crash Rate	
Total Travel (million veh-mi)	**4.37**
Travel Crash Rate (crashes/million veh-mi)	**1.16**
Travel FI Crash Rate (crashes/million veh-mi)	**0.50**
Travel PDO Crash Rate (crashes/million veh-mi)	**0.66**

Table 3. Predicted Crash Frequencies and Rates by Ramp Segment/Intersection (Freeway Ramp Sections)

Segment Number/Intersection Name/Cross Road	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1005+10.748
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Highway Segment	Total Multiple Vehicle Crashes	0.09	11.8	0.20	26.8	0.29	38.7
Highway Segment	Total Highway Segment Crashes	0.28	37.9	0.46	62.1	0.74	100.0
	Total Crashes	0.28	37.9	0.46	62.1	0.74	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+23.000	for segment #1 (1000+00.000 to 1000+23.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1000+23.000	for segment #1 (1000+00.000 to 1000+23.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+00.000	1000+23.000	for segment #1 (1000+00.000 to 1000+23.000), Right shoulder width (0.26 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+23.000	1000+67.000	for segment #2 (1000+23.000 to 1000+67.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+23.000	1000+67.000	for segment #2 (1000+23.000 to 1000+67.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+23.000	1000+67.000	for segment #2 (1000+23.000 to 1000+67.000), Right shoulder width (1.02 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+67.000	1001+11.000	for segment #3 (1000+67.000 to 1001+11.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+67.000	1001+11.000	for segment #3 (1000+67.000 to 1001+11.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+11.000	1001+56.000	for segment #4 (1001+11.000 to 1001+56.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+11.000	1001+56.000	for segment #4 (1001+11.000 to 1001+56.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1001+56.000	1002+00.000	for segment #5 (1001+56.000 to 1002+00.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+56.000	1002+00.000	for segment #5 (1001+56.000 to 1002+00.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+00.000	1002+44.000	for segment #6 (1002+00.000 to 1002+44.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+00.000	1002+44.000	for segment #6 (1002+00.000 to 1002+44.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+44.000	1002+66.000	for segment #7 (1002+44.000 to 1002+66.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+44.000	1002+66.000	for segment #7 (1002+44.000 to 1002+66.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1002+66.000	1003+68.000	for segment #8 (1002+66.000 to 1003+68.000), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+66.000	1003+68.000	for segment #8 (1002+66.000 to 1003+68.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1003+68.000	1006+59.799	for segment #9 (1003+68.000 to 1006+59.799), The ramp type for Ramp Alignment RCDNBNMLK0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1003+68.000	1006+59.799	for segment #9 (1003+68.000 to 1006+59.799), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RCDSBNAIR0
Highway Comment: Imported from RCDSBNAIR0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:16:43 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1007+07.363
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1007+07.363
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: ENT_RAMP_MV_FI=1.0; ENT_RAMP_MV_PDO=1.0; ENT_RAMP_SV_FI=1.0; ENT_RAMP_SV_PDO=1.0;

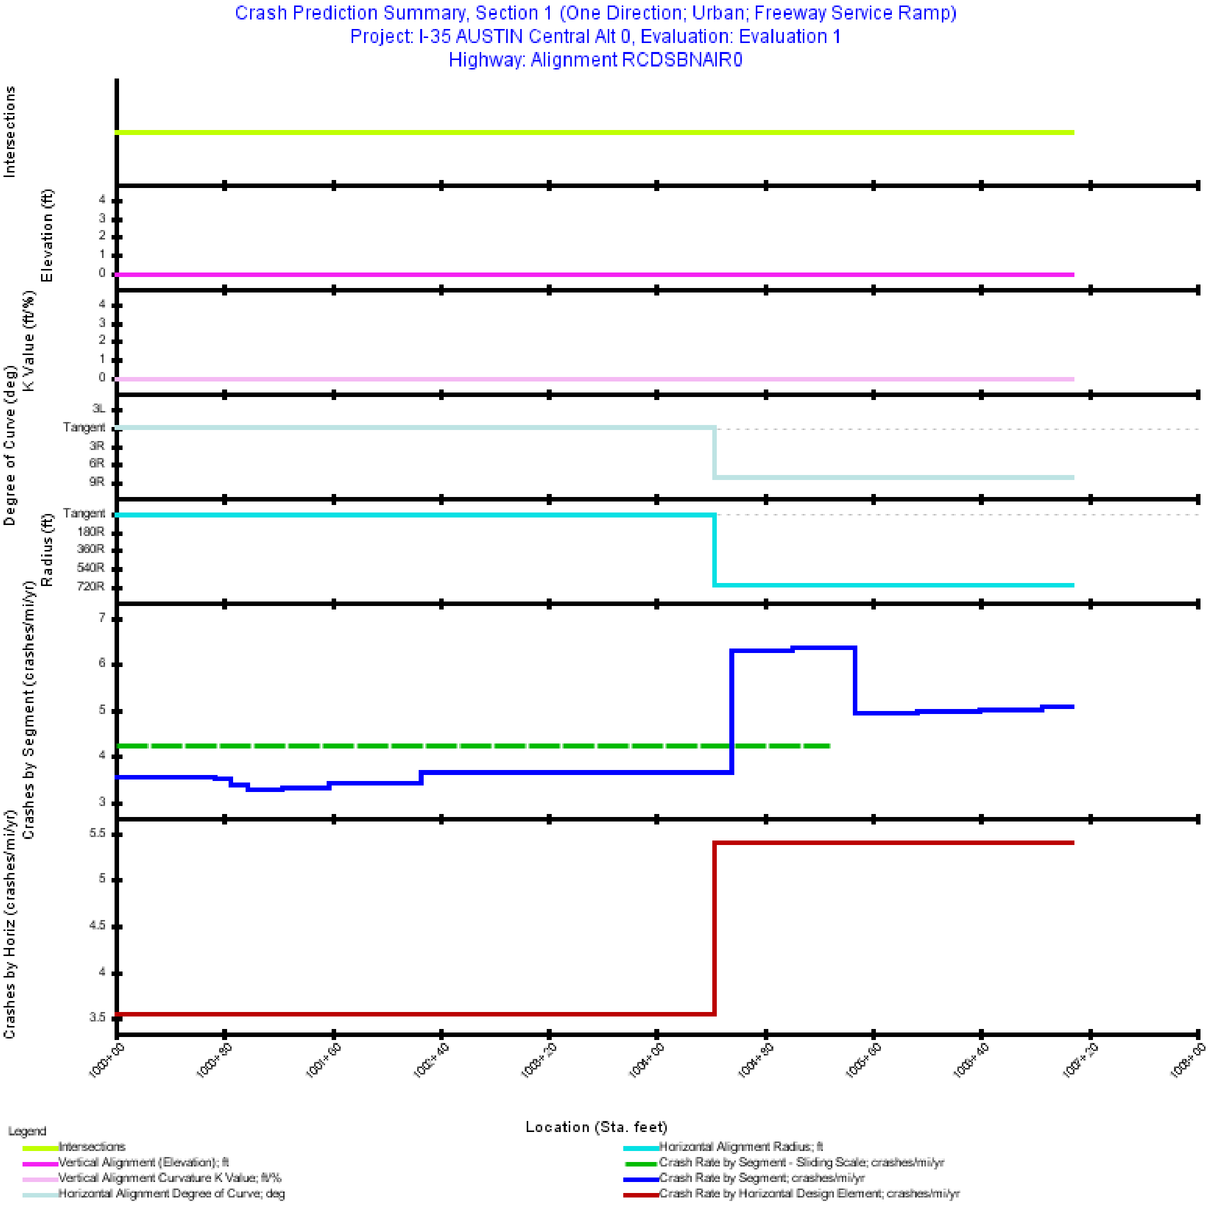

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Entrance	Urban	1000+00.000	1000+55.000	55.00	0.0104	2030: 8,700

14	0.0004	0.0011	0.0072	0.0109	0.0243
15	0.0002	0.0005	0.0036	0.0054	0.0118
Total	0.0041	0.0125	0.0833	0.1474	0.3207

Table 7. Predicted Freeway Ramp Crash Type Distribution (Freeway Ramp Sections)

Element Type	Crash Type	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)	Total Crashes	Percent Total (%)
Highway Segment	Collision with Animal	0.00	0.1	0.01	0.9	0.01	1.1
Highway Segment	Collision with Fixed Object	0.15	25.8	0.17	30.5	0.32	56.3
Highway Segment	Collision with Other Object	0.01	1.8	0.03	5.9	0.04	7.8
Highway Segment	Other Single-vehicle Collision	0.04	7.4	0.03	4.6	0.07	12.0
Highway Segment	Collision with Parked Vehicle	0.00	0.5	0.00	0.7	0.01	1.2
Highway Segment	Total Single Vehicle Crashes	0.20	35.7	0.24	42.7	0.45	78.4
Highway Segment	Right-Angle Collision	0.00	0.2	0.00	0.2	0.00	0.5
Highway Segment	Head-on Collision	0.00	0.1	0.00	0.0	0.00	0.1
Highway Segment	Other Multi-vehicle Collision	0.00	0.2	0.00	0.3	0.00	0.6
Highway Segment	Rear-end Collision	0.03	5.9	0.05	9.5	0.09	15.4
Highway Segment	Sideswipe, Same Direction Collision	0.01	1.4	0.02	3.7	0.03	5.1
Highway Segment	Total Multiple Vehicle Crashes	0.04	7.8	0.08	13.8	0.12	21.6
Highway Segment	Total Highway Segment Crashes	0.25	43.5	0.32	56.5	0.57	100.0
	Total Crashes	0.25	43.5	0.32	56.5	0.57	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+55.000	for segment #1 (1000+00.000 to 1000+55.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+00.000	1000+55.000	for segment #1 (1000+00.000 to 1000+55.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+55.000	1000+61.000	for segment #2 (1000+55.000 to 1000+61.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+55.000	1000+61.000	for segment #2 (1000+55.000 to 1000+61.000), Left shoulder width (0.26 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+61.000	1000+73.000	for segment #3 (1000+61.000 to 1000+73.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+61.000	1000+73.000	for segment #3 (1000+61.000 to 1000+73.000), Left shoulder width (1.02 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1000+73.000	1000+85.000	for segment #4 (1000+73.000 to 1000+85.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+85.000	1000+97.000	for segment #5 (1000+85.000 to 1000+97.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1000+97.000	1001+23.000	for segment #6 (1000+97.000 to 1001+23.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+23.000	1001+58.000	for segment #7 (1001+23.000 to 1001+58.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1001+58.000	1002+26.000	for segment #8 (1001+58.000 to 1002+26.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1002+26.000	1004+55.000	for segment #9 (1002+26.000 to 1004+55.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1004+55.000	1005+01.000	for segment #10 (1004+55.000 to 1005+01.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+01.000	1005+47.000	for segment #11 (1005+01.000 to 1005+47.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+47.000	1005+93.000	for segment #12 (1005+47.000 to 1005+93.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1005+93.000	1006+39.000	for segment #13 (1005+93.000 to 1006+39.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1006+39.000	1006+85.000	for segment #14 (1006+39.000 to 1006+85.000), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.
1006+85.000	1007+07.363	for segment #15 (1006+85.000 to 1007+07.363), The ramp type for Ramp Alignment RCDSBNAIR0 is set at the Ramp Connection (Entrance) and in the Ramp (Entrance). The Ramp value takes precedence.

Interactive Highway Safety Design Model

Crash Prediction Evaluation Report

May 27, 2021

Disclaimer

The Interactive Highway Design Model (IHSDM) software is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no liability for its content or use thereof. This document does not constitute a standard, specification, or regulation.

The United States Government does not endorse products or manufacturers. Trade and manufacturers' names may appear in this software and documentation only because they are considered essential to the objective of the software.

Limited Warranty and Limitations of Remedies

This software product is provided "as-is," without warranty of any kind-either expressed or implied (but not limited to the implied warranties of merchantability and fitness for a particular purpose). The FHWA do not warrant that the functions contained in the software will meet the end-user's requirements or that the operation of the software will be uninterrupted and error-free.

Under no circumstances will the FHWA be liable to the end-user for any damages or claimed lost profits, lost savings, or other incidental or consequential damages rising out of the use or inability to use the software (even if these organizations have been advised of the possibility of such damages), or for any claim by any other party.

Notice

The use of the IHSDM software is being done strictly on a voluntary basis. In exchange for provision of IHSDM, the user agrees that the Federal Highway Administration (FHWA), U.S. Department of Transportation and any other agency of the Federal Government shall not be responsible for any errors, damage or other liability that may result from any and all use of the software, including installation and testing of the software. The user further agrees to hold the FHWA and the Federal Government harmless from any resulting liability. The user agrees that this hold harmless provision shall flow to any person to whom or any entity to which the user provides the IHSDM software. It is the user's full responsibility to inform any person to whom or any entity to which it provides the IHSDM software of this hold harmless provision.

Project Title: I-35 AUSTIN Central Alt 0
Project Comment: Created Fri May 14 16:42:30 CDT 2021
Project Unit System: U.S. Customary

Highway Title: Alignment RCDSBXMLK0
Highway Comment: Imported from RCDSBXMLK0.xml
Highway Version: 1

Evaluation Title: Evaluation 1
Evaluation Comment: Created Thu May 27 13:17:25 CDT 2021

Minimum Location: 1000+00.000
Maximum Location: 1008+24.430
Policy for Superelevation: AASHTO 2011 U.S. Customary
Calibration: HSM Configuration
Crash Distribution: HSM Configuration
Model/CMF: HSM Configuration
First Year of Analysis: 2030
Last Year of Analysis: 2030
Empirical-Bayes Analysis: None
First Year of Observed Crashes:
Last Year of Observed Crashes:

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70 AND 17-58

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58 and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Section Types

Freeway Ramp Evaluation

Section: Section 1
Evaluation Start Location: 1000+00.000
Evaluation End Location: 1008+24.430
Functional Class: Freeway Service Ramp

Type of Alignment: One Direction

Model Category: Freeway Service Ramp

Calibration Factor: EX_RAMP_MV_FI=1.0; EX_RAMP_MV_PDO=1.0; EX_RAMP_SV_FI=1.0; EX_RAMP_SV_PDO=1.0;

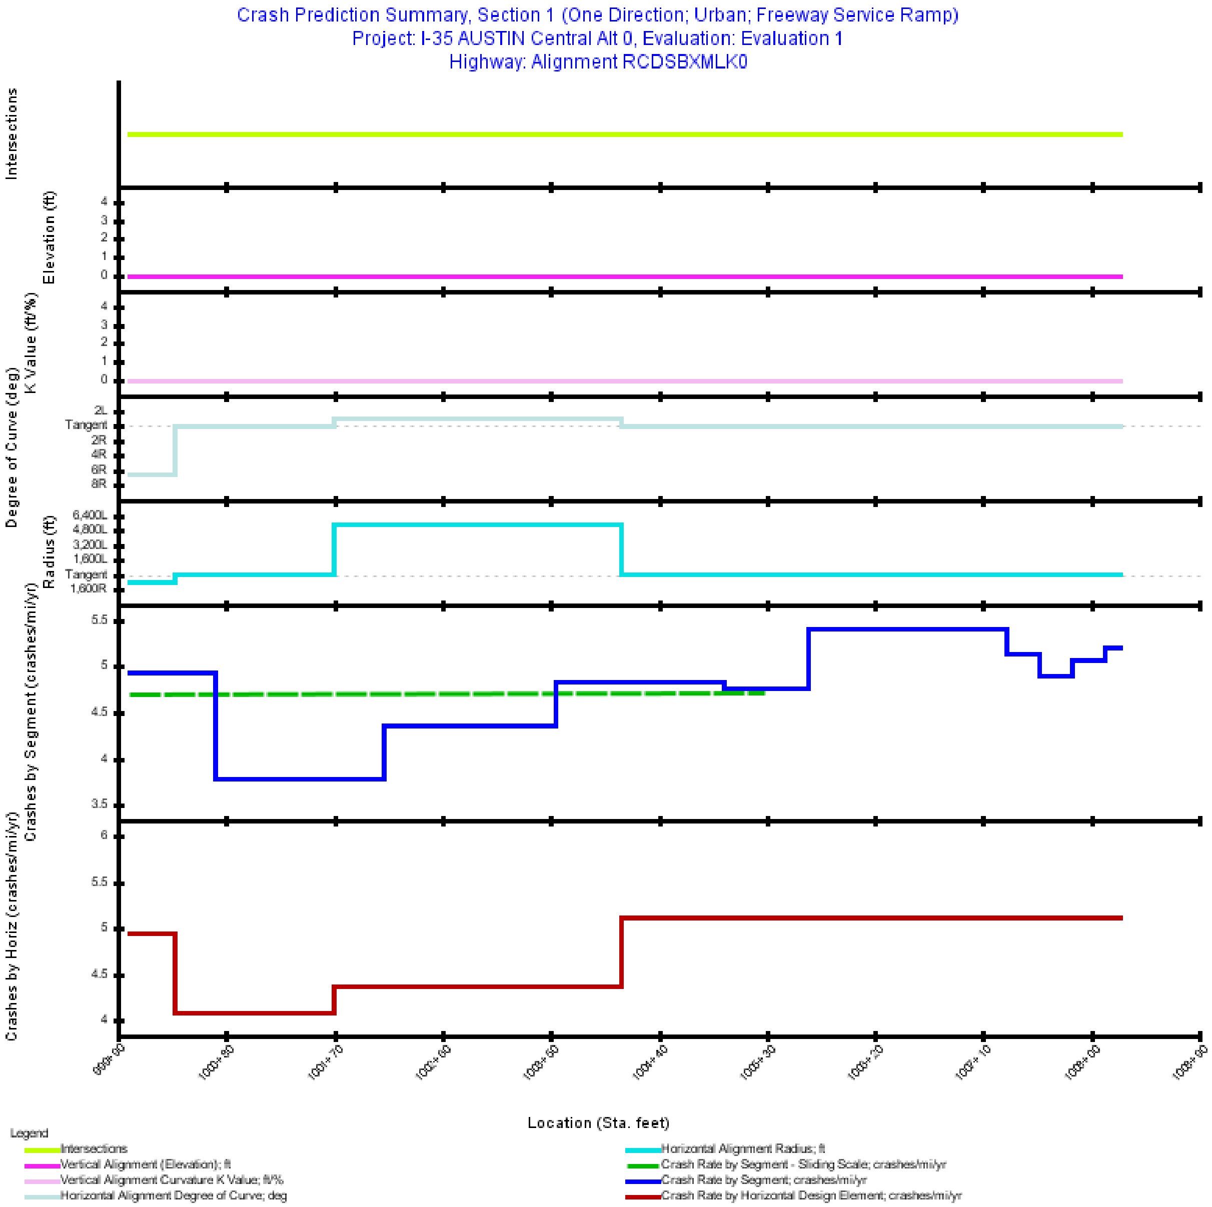

Figure 1. Crash Prediction Summary (Freeway Ramp Sections)

Table 1. Evaluation Freeway - Homogeneous Segments (Freeway Ramp Sections)

Seg. No.	Type	Area Type	Start Location (Sta. ft)	End Location (Sta. ft)	Length (ft)	Length (mi)	AADT
1	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+00.000	1000+71.000	71.00	0.0134	2030: 12,450
2	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1000+71.000	1002+12.000	141.00	0.0267	2030: 12,450
3	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1002+12.000	1003+54.000	142.00	0.0269	2030: 12,450
4	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1003+54.000	1004+95.000	141.00	0.0267	2030: 12,450
5	Freeway Ramp and C-D Road One-lane Ramp Exit	Urban	1004+95.000	1005+65.000	70.00	0.0133	2030: 12,450
6	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1005+65.000	1007+29.000	164.00	0.0311	2030: 12,450
7	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1007+29.000	1007+57.000	28.00	0.0053	2030: 12,450
8	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1007+57.000	1007+84.000	27.00	0.0051	2030: 12,450
9	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1007+84.000	1008+11.000	27.00	0.0051	2030: 12,450
10	Freeway Ramp and C-D Road Two-lane Ramp Exit	Urban	1008+11.000	1008+24.430	13.43	0.0025	2030: 12,450

Table 2. Predicted Ramp Crash Rates and Frequencies Summary (Freeway Ramp Sections)

First Year of Analysis	**2030**
Last Year of Analysis	**2030**
Evaluated Length (mi)	**0.1561**
Average Future Road AADT (vpd)	**12,450**
Predicted Crashes	
Total Crashes	**0.74**
Fatal and Injury Crashes	**0.31**
Property-Damage-Only Crashes	**0.42**
Percent of Total Predicted Crashes	
Percent Fatal and Injury Crashes (%)	**42**
Percent Property-Damage-Only Crashes (%)	**58**
Predicted Crash Rate	
Crash Rate (crashes/mi/yr)	**4.7145**
FI Crash Rate (crashes/mi/yr)	**1.9912**
PDO Crash Rate (crashes/mi/yr)	**2.7233**

Highway Segment	Collision with Other Object	0.01	2.0	0.05	6.8	0.07	8.8
Highway Segment	Other Single-vehicle Collision	0.06	8.3	0.04	5.2	0.10	13.5
Highway Segment	Collision with Parked Vehicle	0.00	0.6	0.01	0.8	0.01	1.4
Highway Segment	Total Single Vehicle Crashes	0.29	39.8	0.36	48.8	0.65	88.6
Highway Segment	Right-Angle Collision	0.00	0.1	0.00	0.2	0.00	0.2
Highway Segment	Head-on Collision	0.00	0.0	0.00	0.0	0.00	0.0
Highway Segment	Other Multi-vehicle Collision	0.00	0.1	0.00	0.2	0.00	0.3
Highway Segment	Rear-end Collision	0.01	1.8	0.04	6.2	0.06	8.0
Highway Segment	Sideswipe, Same Direction Collision	0.00	0.4	0.02	2.4	0.02	2.8
Highway Segment	Total Multiple Vehicle Crashes	0.02	2.4	0.07	8.9	0.08	11.4
Highway Segment	Total Highway Segment Crashes	0.31	42.2	0.42	57.8	0.74	100.0
	Total Crashes	0.31	42.2	0.42	57.8	0.74	100.0

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 8. Evaluation Message

Start Location (Sta. ft)	End Location (Sta. ft)	Message
1000+00.000	1000+71.000	for segment #1 (1000+00.000 to 1000+71.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1000+71.000	1002+12.000	for segment #2 (1000+71.000 to 1002+12.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1002+12.000	1003+54.000	for segment #3 (1002+12.000 to 1003+54.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1003+54.000	1004+95.000	for segment #4 (1003+54.000 to 1004+95.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1004+95.000	1005+65.000	for segment #5 (1004+95.000 to 1005+65.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+65.000	1007+29.000	for segment #6 (1005+65.000 to 1007+29.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1005+65.000	1007+29.000	for segment #6 (1005+65.000 to 1007+29.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+29.000	1007+57.000	for segment #7 (1007+29.000 to 1007+57.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+29.000	1007+57.000	for segment #7 (1007+29.000 to 1007+57.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+57.000	1007+84.000	for segment #8 (1007+57.000 to 1007+84.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+57.000	1007+84.000	for segment #8 (1007+57.000 to 1007+84.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1007+84.000	1008+11.000	for segment #9 (1007+84.000 to 1008+11.000), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1007+84.000	1008+11.000	for segment #9 (1007+84.000 to 1008+11.000), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.
1008+11.000	1008+24.430	for segment #10 (1008+11.000 to 1008+24.430), The ramp type for Ramp Alignment RCDSBXMLK0 is set at the Ramp Connection (Exit) and in the Ramp (Exit). The Ramp value takes precedence.
1008+11.000	1008+24.430	for segment #10 (1008+11.000 to 1008+24.430), Left shoulder width (0.00 feet) is less than specified boundaries (2.00 feet); adjusted in CMF calculations.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Disclaimer Regarding Crash Prediction Method

IMPORTANT NOTICE ABOUT COMPARING RESULTS FROM HIGHWAY SAFETY MANUAL FIRST EDITION (2010) MODELS TO RESULTS FROM NEW MODELS DEVELOPED UNDER NCHRP PROJECTS 17-70, 17-58, AND 17-68

Since the publication of the Highway Safety Manual - First Edition (HSM-1), in 2010 by the American Association of State Highway and Transportation Officials (AASHTO), multiple research efforts have been undertaken through the National Cooperative Highway Research Program (NCHRP) to develop safety performance models for road segment and intersection facility types that were not initially reflected in the HSM-1, in order to expand the breadth and depth of the HSM in the future.

The IHSDM Crash Prediction Module (CPM) is intended as a faithful implementation of HSM Part C predictive methods. As NCHRP projects to develop new predictive methods for the HSM are completed, FHWA works to incorporate the new methods into IHSDM, sometimes in advance of publication in the HSM. The following new crash predictive methods have been accepted by NCHRP project panels and incorporated into IHSDM, while pending AASHTO's approval for incorporation into a future edition of the HSM:

- Roundabouts: completed in 2018 under NCHRP Project 17-70, the new methods will provide improved outcomes for the safety analysis of roundabouts.
- 6+ lane and one-way urban/suburban arterials (including models for segments and intersections): completed under NCHRP Project 17-58.
- Intersection crash prediction methods for some intersection configurations and traffic control types not currently addressed in the HSM (e.g., all-way stop; rural 3-leg signalized; 3-leg stop-controlled where the major leg turns; urban 5-leg signalized; urban high-speed intersections): completed in 2021 under NCHRP Project 17-68.

However, in the absence of local calibration factors (see HSM-1 Part C, Appendix A for guidance on calibration of the predictive models), it is neither appropriate nor advisable to directly compare the results from new models (from NCHRP Projects 17-58, 17-68, and 17-70) to results from HSM-1 models, as the models were not calibrated to the same base state data sets, and consequently can produce unexpected results. If local calibration factors are available and applied to both new models and HSM-1 models, then it may be appropriate to directly compare the results.*[Note: Work being performed under NCHRP Project 17-72 (Update of Crash Modification Factors for the Highway Safety Manual) is expected to re-calibrate many of the old (HSM-1) and new (e.g., NCHRP 17-70) models to data from a single (or small number of) states, that would allow results from all models to be directly compared.]*

The models produced for NCHRP Project 17-70 have independent value in terms of informing the design of a roundabout and assessing the effects of different design characteristics on the expected safety performance of a roundabout.

The HSM-1 interim method previously included in IHSDM for evaluating roundabouts on urban/suburban arterials (i.e., evaluating an existing intersection and then applying a Crash Modification Factor for replacing the existing intersection with a roundabout) has been deactivated in IHSDM, to minimize any confusion with the new roundabout methodology.

Total			1.6315	115.156	115.1558	31.9619	83.1939	70.5819	1.08

Note: *Effective Length* is the *segment length* minus the length of the *speed change lanes* if present. This may create Freeway segments with zero effective length and zero crashes.

Table 4. Predicted Crash Frequencies and Rates by Horizontal Design Element (Section 1)

Title	Start Location (Sta. ft)	End Location (Sta. ft)	Length (mi)	Total Predicted Crashes for Evaluation Period	Predicted Total Crash Frequency (crashes/yr)	Predicted FI Crash Frequency (crashes/yr)	Predicted PDO Crash Frequency (crashes/yr)	Predicted Crash Rate (crashes/mi/yr)	Predicted Travel Crash Rate (crashes/million veh-mi)

Table 5. Predicted Crash Frequencies by Year (Section 1)

Year	Total Crashes	FI Crashes	Percent FI (%)	PDO Crashes	Percent PDO (%)
2030	115.16	31.96	27.755	83.19	72.245
Total	115.16	31.96	27.755	83.19	72.245
Average	115.16	31.96	27.755	83.19	72.245

Note: *Fatal and Injury Crashes* and *Property Damage Only Crashes* do not necessarily sum up to *Total Crashes* because the distribution of these three crashes had been derived independently.

Table 6. Predicted Crash Severity by Freeway Segment (Section 1)

Seg. No.	Fatal (K) Crashes (crashes)	Incapacitating Injury (A) Crashes (crashes)	Non-Incapacitating Injury (B) Crashes (crashes)	Possible Injury (C) Crashes (crashes)	No Injury (O) Crashes (crashes)
1	0.1697	0.3478	2.6049	5.0752	22.6086
